From: imaglitch
Topic: 3776 Message: 3811

I bought five usb to serial(DB9) interface converters(driver
software included)at cyberguys.com a couple years back. I used them
to interface all my rigs... ICOM, Kenwood and Yeasu and haven't had
any problems as long as I kept the com port assignments and port
baud-rates straight.

When I bought then they were $14.95 now there $19.95.

I'm in no way affilliated with Cyberguys and recieve no rewards for
recommending them. They just happened to be the only place I could
find the converters on-line a couple years ago. I've seen them
carried at BestBuys and Circuit City now.

Will this application work with a ZIRE 71?

What kind of cabling do I need?
Is there somewhere I can download a diagram of the pinout to make up
a cable?

Topic: 3807 Message: 3813

I got "RADIOCOM 4.5" with my PCR. It looks like that the software that comes with the radio isn't always the same.

At the time "RadioCom" seemed pretty good; but, if I had to buy it seperately...IT"S too DARN EXPENSIVE.

I went to Dayton this year and met with the distributor. Bonita has come out with V5.2 which I bought for a special Dayton price.

A few weeks ago, I found "Ham Radio Deluxe". It cost nothing. In my opinion, HRD is every bit as good as "RadioCom", if not better. The only value I can see that "RadioCom" has,now,over HRD or even "TalkPC" is that it decods and saves WEFAX and FAX pictures. That's basically what I use it for. Because,I live in a Hurricane area and volunteer with our local ARES/emergency services.

At the time I started with "RadioCom", there wasn't to much available. Plus, I got the application free with my PCR. I'm sure you've looked at the prices for Bonita's software. It made my teeth chatter!

If HRD had a FAX decoder option with it I wouldn't even bother with "BONITA RADCOM 5.2". I would have never spent the money for the upgrade if I knew HRD(or TALKPC) existed...

It seems to me that Bonita is going to have to offer something much better to compete with all the available FREE software for the PCR1000.

If I new all the software available for the PCR. It would be nice to have it in a list with it's features, price, description and some sort of overall good or bad rating.

Or better still, use TalkPCR which handles the problem correctly. It puts up a message saying "no bandscope in ssb/cw", meanwhile the receiver still works. This is the way Icom should have programmed it.

3823. How to interface with and program the PCR-1000?

Yahoo group: PCR1000
Date: 2005-07-23 05:54:28 UTC
From: firemanacab
Topic: 3823 Message: 3823

I have done some programming and wonder what is required for writing a program to control the PCR-1000. I use TalkPCR now but would like to experiment and write a program with some new features. What do you think I need to start this project? Perhaps something for writing C++ code and some documentation on how to interface to the PCR1000. I need to know what to start with.

3826. RxPlus: Great review in Monitoring Times ! and New Version (1.82)

Yahoo group: PCR1000
Date: 2005-07-23 22:59:01 UTC
From: Noel Bouchard
Topic: 3826 Message: 3826

Hello all !

Just a short word to say that a new version of RxPlus is now
available. This is version 1.82 with the following changes and improvement
since the last release.

- Bug fix that prevented the program from starting on some Windows XP
SP2 setups.
(If the program did not start before please try this new version ...)

- A new Live Chat feature ! Chat and exchange frequencies with other
online users ...
- Improved Noise Reduction filters
- Better RTTY decoding.
- Some cosmetic changes and small bug fixes.

You can get the full version from my site at:
http://www.cam.org/~noelbou/RxPlus/

+--+
Review of RxPlus in Monitoring Time August 2005
+--+

RxPlus has received a GREAT review by Monitoring Times'
John Catalano, writer of the Computers & Radio" column.

Listen to this ....:

"... after using RxPlus it has become my standard shortwave monitoring
program
against which all else will be judged."

John Catalano, MT
+--+

Noel Bouchard
RxPlus Developer.

3827. 8.33 Khz step?

Yahoo group: PCR1000
Date: 2005-07-25 00:46:30 UTC
From: telefranciscocamela
Topic: 3827 Message: 3827

Hi, I'm interested on buying the ICOM PCR-1000, but, do you know if the ICOM haves the 8.33 Khz step used in airband?

Thanks in advance.

3828. RE: [PCR1000] 8.33 Khz step?

Yahoo group: PCR1000
Date: 2005-07-25 00:59:28 UTC
From: Terry Griffiths
Topic: 3827 Message: 3828

If you use TalkPCR as the control program (it's free and very good, better than the Icom software) there is provision for setting the frequency spacing for the Aircraft bands.

Cheers

Terry Griffiths

3829. Re: 8.33 Khz step?

Yahoo group: PCR1000
Date: 2005-07-25 00:56:42 UTC
From: telefranciscocamela

Well, so it depends on the software?
This is, the software provided by ICOM does not allows this?

Thanks in advance.

Radio Com requires the "dongle" that came with the software. Otherwise, use TalkPCR without the "dongle". TalkPCR is superior to the RadioCom software.

3833. Having trouble with TalkPCR

Yahoo group: PCR1000
Date: 2005-07-27 02:13:48 UTC
From: groovmastr
Topic: 3833 Message: 3833

Hi,
I have a Keyspan USA-19HS USB to 9 pin adapter. I can run most all programs, Icom's, HRD, PCRScope, Bonito, they all work great.

The adapter comes up on Comm 4. TalkPCR says it is not able to open Comm 4. I've tried changing the Comm port and TalkPCR still won't talk to it.

Any ideas? I find it odd that all the other software works and TalkPCR doesn't.

I have mine configured via com port 6 when using Talk
PCR - never had any trouble with HRD either

Hi,

I'm using a Radio Shack USB/RS232 interface on COM 7 with the Icom software, HRD and Talk PCR with no problems. I don't use TalkPCR too much as it seems to like a lot more CPU resources then the Icom software (or HRD). Have you tried a different interface adapter?

From: valenfor
Topic: 3836 Message: 3836

Hello everyone,

I was looking at taking my PCR-1000 with me on my way to DEFCON.
However I need to run it off of my MAC. The links for MACPcr are all
broken, anyone have a copy or a current link where it is located?

Thanks,

V

3837. We repair Icom PCR-1000 EEPROM corruption

Yahoo group: PCR1000
Date: 2005-07-28 13:17:10 UTC
From: gamerxgamerx
Topic: 3837 Message: 3837

Hello to all PCR1000 group,

We offer our services for repairing the annoying PCR1000 EEPROM corruption. We include original & repaired eeprom on floppy/cdrom and tuner alignment of the receiver is included in the service. Price is 50 euro per repair (plus shipping costs). We are located in Barcelona, Spain. More than 30 units already repaired! Guaranteed repair or all shipping costs refunded.

How to know if your PCR1000's EEPROM is corrupted? Contact us if you have one or more of those sympthoms:

· Signal meter shows incorrect values (no empty frequencies with signal 0 and/or very strong receptions like local FM radio show less than +20)

· Low reception sensivity (general, random, or specially pronounced on VHF/UHF, deaf on some frequencies, in some cases changing software or closing/opening shows change in reception quality on the same frequency)

· Band Scope anormal functionality (all frequencies shown with activity even if empty and/or some steps show more activity than others even if the signal level is the same)

· Checking the AFC option on any frequency (NFM mode) tunes downwards or upward forever.

If you sense another kind of anormal activity of your receiver, please ask us and we'll help you to determine if it's EEPROM fault.

Hi Manuel Jesus,

like other member wrote before you need to insert in your RS-232
port the dongle that cames with the software, the cable is just the
one that cames with your PCR-1000. I have mine working just fine!
If you need more information email me directly and we can have an
meeting in Portuguese.

3843. Re: [PCR1000] Digest Number 981

Yahoo group: PCR1000
Date: 2005-08-01 02:26:03 UTC
From: Richard Stern
Topic: 3843 Message: 3843

I have 5.2 and it had a DB9 GIZMO called an 'IC-SWL'
that attaches between the radio and interface cable.
I think it switches the interface lines (TX, RX,
RTS,DTR, etc) for the model radio you are using with
RADIO COM. The earlier versions (4.5) did not require
this little attachment.

You might be able to hardware a cable for your rig,
unless that the IC-SWL messes with with the
handshacking or compensates for some sort of data
delay the program needs.

After I purchased the upgrade from 4.5 to 5.2, I was
disappointed. There wasn't much change in features and
for the price, there are other applications, by far,
cheaper and a whole lot better. RxPlus is an example,
which cost $79.99 ... That's about what I paid for the
Bonita upgrade at Dayton.

I'm not pleased and if there was a way to get my money
back, I would definately spend it on RXPLUS.

TALKPCR is no longer supported. If it wasn't for the
stupid "NAG SCREEN" on version 2.99 It would be the
way to go. The spectrum analyzer feature is an
indipensable tool worth it's weight in RF modulated
electrons...

Another PCR1000 interface program that is impressive
is HAM RADIO DELUXE. It's free. It works. It has a
wonderful GUI.

I think Bonita is more of a commercial vendor and
markets to HAMs as an after thought.
..

3845. Hmmm maybe someone can explain this:

Yahoo group: PCR1000
Date: 2005-08-11 05:50:53 UTC
From: Patricia Gibbons
Topic: 3845 Message: 3845

Why is it that there are three yahoogroups for the
PCR-1000 radio??:
----
icom_pcr1000@yahoogroups.com = 538 members
pcr-1000@yahoogroups.com; = 847 members
pcr1000@yahoogroups.com = 1948 members

How about if we all move to the PCR1000 group since
it has the larger membership anyway, or is everyone
subscribed to all three at once, and if so, what is
the advantage ???

Sorry ... couldn't help but ask .. :-)

Trish

I would agree regarding freedom of choice if the choices were
different from one another, however all three are for the PCR-1000..

I've had my PCR-1000 for a few years and find it to be a really great
arrangement for both VHF/UHF scanning, and as a pretty good shortwave
and amateur band receiver...

I'm adding a Clearspeech DSP speaker, and an active audio bandpass
filter in order to provide a bit more functionality to it ...

Patricia,

I guess I should have elaborated, there are often different schools of thought regarding the running of groups, I run a number of groups myself and as somebody once said you can not please all of the people all of the time.

I would suggest that the best option is look for the group with the most members and you will proberely get the best cross section of information anyway.

I have been using the PCR100 mainly for work related business; I am in the communications industry, but also use the unit when I have time for Amateur radio and digital modes like PSK31.

I have been using TalkPCR as the OS for some while as it suits my requirements, again there are a lot of different programs developed that are better than the disappointing original Icom software, they are my thoughts anyway,

Good Luck

Terry P29ZTC

Date: 2005-08-11 08:11:31 UTC
From: Patrik Tast
Topic: 3850 Message: 3850

Hello group,

This is my first post, and I do not YET own a pcr-1k.
My name is Patrik Tast and I'm from Finland.

I'm developing an opensource APT (Automatic Picture Transmission)
decoder, for windows, and pcr-1k support is wanted to it.
see http://www.ptast.com/apt/decoder/

So if any one could sell me a used one so please contact.
My email is patrik@... if you want to mail me directly.

Best regards
/patrik

Hi Pat,

I downloaded your software, after setting my PCR-1000 to Com 4
then 5 I got a response that my radio is not supported.
Please let me know if I need to set it up in a different manner or if my
PCR-1000 radio is not supported.

Thanks,

Dave Freeman >>

I think Pat is saying there is a request to support the PCR-1000 and that is why he is asking to purchase one, so he can develop support for it.

Hi Dave & chuckledust,

Many thanks folks for your quick responces!

Thanks for downloading and testing (I'm the developer of the apt decoder software, ptast). Please note that this sw is still under heavy development, and is missing alot of important features. Anyway if you are interested in receiving APT-images here is the Daily Log generated by the sw http://ptast.com/apt/logs/daily/index.html

Yep pcr-1k is not yet supported! I need an ic pcr-1k to get it supported.

chuckledust wrote:

> C.Dust

I have tried and tried getting it working by reading docs, but in vane. The pcr-1k is a too smart iron to be programmed without having the receiver connected to the serial port (if the receiver is connected (to the com-port) the serial hardware will respond in a different way).

So again, I would be very interested to by a secondhand pcr-1k.

PS: Great group, alot of action...

Regards
/patrik

3858. APT more Info

Yahoo group: PCR1000
Date: 2005-08-11 17:01:03 UTC
From: Patrik Tast
Topic: 3858 Message: 3858

Hi All! Again me, ptast,

Further info abour APT-satellites:

NOAA 12 and 15:
137.500 MHz NFm (NOAA 15 swiched off curently due to NOAA 12
footprint overlap)

NOAA 17:
137.620 MHz NFM, status: ON

NOAA 18:
137.9125 MHz NFM, status: ON, Transmitting visible channels 1 and 2 only

See for current- and more info about satellite status:
http://groups.yahoo.com/group/weather-satellite-reports/

Related APT and HRPT yahoo groups:
http://groups.yahoo.com/group/GEO-Subscribers/
home page: http://www.geo-web.org.uk/

http://groups.yahoo.com/group/rig-l/
home page: http://www.rig.org.uk/

HRPT = Hight Resolution Picture Transmission
More info at: http://www.time-step.com/hrptsystem2.htm

/patrik

3859. TrunkPCR Version 0.7.177 Update

Yahoo group: PCR1000
Date: 2005-08-20 01:13:26 UTC
From: Jay
Topic: 3859 Message: 3859

TrunkPCR Version 0.7.177 Update is available for downloading here:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a couple bugs:

Aug 05,2005 - Fixed: Listening to Continuation Calls (Same ID).
Aug 08,2005 - -----: "Save Bank" now saves Group/Radio ID's if changed.
Aug 10,2005 - -----: Combined Trunk ID Edit and Group/Radio Stats.
Aug 10,2005 - -----: Changed Trunk Menu to reflect above change.
Aug 15,2005 - Fixed: Saving Settings in Registry with Permissions..
Aug 16,2005 - Fixed: Saving Last Used Channel if VFO turned CCW.
Aug 16,2005 - Fixed: Scanning During Trunking. Previous change in
decoder...

Plus a few other things...

Regards,
Jay

It's got to be something related to your pc then.
It works on 2 of my Win98 machines and 18 other registered users who have Win98 on their pc...

What exactly does it do before it crashes?
Does it crash right away when started?
Does it crash when you start trunking?
Did you set up TrunkPCR following the setup guide in the help page from my website?

Thanks,
Jay

3864. Search and Download over 80 Million movies online! 100% legal !!

Yahoo group: PCR1000
Date: 2005-08-21 17:01:27 UTC
From: rudtammy6
Topic: 3864 Message: 3864

Hello,

I've recently found this great web site: http://www.shared-movies.net

You can search and download over 80 million movies and other videos. It's 100Åegal for a very cheap membership.

There is o time limits, no bandwidth limits, no content limits!!! Download anything you want, any time you want.

I copy informations from the web site about the avantages of this service:

» Over 80 Million Movies and TV-Shows to choose from
»; Play movies on your computer, Home theater or TV.
» Burn your DVDs. No expensive DVD burner required!
» No Charge per movie, No download limit what so ever!
» Unlimited access! Download several movies at a time.
» No Spyware, Banners, Popups or Advertising.
» Unlimited technical support, suggestions and ratings.
» Learn how to make your own DVD movie collection.

And here some comments about it:

-- During my first week as a member I have collected over 20 movies, 6 games and 2 softwares of the latest version. I never thought it possible before, and it was simple! Keep up the good work! --
- Marc

-- This is sure one of the very best to download all movies, players, and lots more. Its really worth being a member here. I love this site. --
- Mike

3865. PCR-1000 sale

Yahoo group: PCR1000
Date: 2005-08-21 17:47:41 UTC
From: Jerry
Topic: 3865 Message: 3865

I have an extra PCR-1000 (unblocked)

I could use some cash, but don't know what the going price is.

Should I ebay it or wait?

TIA

Hi David,
I'm presently using the Radio Shack USB/RS232 adapter cable that requires no gender changer, and I have used the USB/RS232 adapter from Buxcomm: http://www.buxcomm.com/Special_Connectors.htm
It also dosen't require a gender changer and both of these work quite well. In fact, I've never seen an adapter that required a gender changer, but Radio Shack does have a FF gender changer that you can change the mounting bolts on to provide solid connections either way (26-230).

3880. Re: [PCR1000] PCR 1000 to USB laptop

Yahoo group: PCR1000
Date: 2005-08-25 02:21:45 UTC
From: Thomas McDaniel
Topic: 3872 Message: 3880

Hi David,

No, its not. The 26-128 is for cameras -- I don't think it does the RS-232 conversion. You want the 26-183 USB to Serial cable. This is the one that I'm presently using with my PCR-1000, but be advised that the drivers are supplied on a floppy disk for this cable -- you will need a floppy disk drive or put them on a CD-R (what I did).

I actually prefer the Buxcomm cable, but it is only about 12 inches long (it does mate with the cable that Icom supplied with the PCR1000 without any adapters). However, it does have its drivers on a CD and its only about half the price of the Radio Shack unit. :-)

3881. PCR1000 USB

Yahoo group: PCR1000
Date: 2005-08-26 11:11:07 UTC
From: tomobickers
Topic: 3881 Message: 3881

Hi,

I had a hell of a problem getting USB to work with my PCR. I bought various adaptors, but none worked. I tried a long shot and bought a Wnradio adaptor. Bingo, it worked out of the box with XP.

Cheers...

I have a deaf PCR-1000. this is the un-blocked Canada version. It has the service manual, ant, cable, power supply and software. If anyone is interested please make a offer. Dan

3883. Re: PCR1000 control software for Windows Pocket PC

Yahoo group: PCR1000
Date: 2005-08-27 04:30:50 UTC
From: Lynn Hansen
Topic: 3735 Message: 3883

Stefan,

Although it doesn't presently support the PCR1000, I have a program called CTR-Remote (CTR="Control the Radio") for Pocket PC 2002/2003 that I developed to control various amateur radios. I have been approached to add PCR1000 support and have been offered a loaner test unit.

I also build a Bluetooth serial interface (CTR-BlueAir) for the Yaesu radio with adapters for other manufactures which could also be modified for the PCR1000 (I hate cables!). This unit will work on PC's too if your PC software supports Bluetooth (not all do).

CTR-Remote also supports TCP/IP and Wifi connections. When used with Microsoft Portrait software, you can easily configure a complete remote control terminal with audio that will allow you to listen to your radio anywhere within your Wifi range (or over the Internet).

Please visit my web site for more information...

www.lynovation.com

and let me you're interested in something like this.

Lynn

3884. Corrupt eeprom?

Yahoo group: PCR1000
Date: 2005-08-28 20:45:22 UTC
From: stubinns
Topic: 3884 Message: 3884

Hi All

New member here from the UK

I've just aquired a 2nd hand PCR1000 off ebay

It seems to work reasonably well but I have a few issues and questions

1. When using the icom s/w after a period of use it loses
communication with the PCR1000 and has to be restarted. TalkPcr never
disconnects so I dont think this is a problem with the scanner
itself. anyone else seen this?

2. The pcr does seem a little low on sensitivity, it picks up most
signals ok but compared to my AOR AR8200MK2 it is positively deaf.

If I tune both sets to a known not too distant FM station in the
same position using the same whip antenna, the AOR picks it up no
problem but all i get from the PCR is noise. Also the aor seems less
prone to noise and intermodulation.

3. I've read as much as I can find on here about Eeprom corruption.
I've backed up my eeprom and tried loading a few from the files
section but that hasnt helped.

Is there a definitive test or symptom that indicates a corrupt eeprom
or is the AOR just a better receiver?

Stu UK

3885. Bonito software

Yahoo group: PCR1000
Date: 2005-08-28 23:13:41 UTC
From: William Hayes
Topic: 2091 Message: 3885

Can anyone tell me how Bonito software compares to the others?
opinions please. And How can I get my PCR1000 to do 800 mhz
Trunking? Do I need special software? if so, where can I Buy it?
Just a few questions from a newbe. Thanks, Bill H.

Hi Bill,

I have a program that does Trunking on Motorola and Edacs Systems called
Trunk PCR..
It can be downloaded here:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

You can use it in demo/trial mode as long as you like...

Regards,
Jay

Bill

I chime here on your question. I have the TrunkPCR and it is absolutely great. Just wanted to share that with you.

Bonito radiocom is great for HF weather fax,CW and Navtex.
For 800 Mhz You need trunkpcr.
Jay Bray (crazy californian) work a great program for trunking Motorola and
M/A COM EDACS.
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html
I am running it right now with EDACS on our local system.

3889. Re: Corrupt eeprom?

Yahoo group: PCR1000
Date: 2005-08-29 15:31:35 UTC
From: Paul
Topic: 3884 Message: 3889

Hi Stu,

I have had the same disconnect problem happen to mine as well and likewise, TalkPcr is fine. I'm currently using Ham Radio Deluxe to control mine from a remote hilltop site and that appears to work OK, no idea what causes the disconnects with the Icom software.

I'm not too well qualified to talk about corrupt eeproms, the only time mine went a bit screwy I had no squelch control but reloading the data through TalkPCR fixed it. I've read about people having to return PCRs to Icom though, does this mean they've really screwed the eeprom or they don't know about reloading it themselves?

Finally, should all eeproms have the same data as other PCRs?

Paul

Does the Icom software allow the user to save and restore eeproms? I don't think so, but I've not used it much, preferring TalkPCR.

Also, aren't there documented cases of eeproms being so screwed that they won't even talk to the computer, let alone allow a restore?

It does seem to be the receiver's Achilles heel.

> Finally, should all eeproms have the same data as other PCRs?

I don't think so, IIRC there's alignment data stored in the eeprom. And also, the US version has a break in coverage to stop people eavesdropping on the mobile phone channels, and I think that's also a parameter stored in the eeprom.

Peter

One thing I've noticed with my PCR1000 is that it overloads very easily. Be sure to switch on the Attenuator and it will hear much better.

As a matter of interest i phoned Icom UK today and asked about corrupt eeproms, they basically said that they have never had a PCR1000 back for a corrupt eeprom?

3894. Balun or Antenna Tuner?

Yahoo group: PCR1000
Date: 2005-08-30 20:56:52 UTC
From: Mark W.
Topic: 3894 Message: 3894

I would like to improve the reception of my PCR1000 and have heard that both a balun and tuner such as the MFJ-956 help. I currently use a long wire. Any recommendation would be appreciated.

3895. Re: [PCR1000] Balun or Antenna Tuner?

From: nt1g@comcast.net
Topic: 3894 Message: 3895

Consider a balun for your long-wire. A long-wire antenna's
impedance is typically above 600 ohms, while the radio
is happier with a 50 ohm antenna (also, a tuner's Q is
directly related to the antenna's impedance). A 9:1
balun does this well, and also gives your antenna a DC
/static discharge path. Even a 'baby' lighning cloud will
seek ground, a long wire is often the path, discharging internally and making the radio
'deaf'. A lot of static, but that's it.

I hate to be the bearer of bad news, however today Icom announced they have discontinued the PCR-1000 and that all Icom stock has been depleated. I do not have any information on whether there will be a replacement, but will keep the group posted if I learn any more.

Sad to see this great receiver go.

I use a MFJ 969 HF transciever tuner. This allows me to tune out any
hetrodynes and most other unwanted noises while recieving a decent signal.
I have yet to try out a long wire balun. I run a diapole and a 1 to 1 balun.
The balun cut down on some static I was experiencing.
Skip, if I can remember sometime last year you were experimenting with long
wire blaun's. How was the outcome?

3898. Re: [PCR1000] Balun or Antenna Tuner?

Yahoo group: PCR1000
Date: 2005-08-31 12:28:12 UTC
From: nt1g@comcast.net
Topic: 3894 Message: 3898

I wound a quadfiliar (4 wires) around a T-80 core, using
guidance from the ARRL book, "Transmission Lines and
Transformers". But instead of documenting it with a tracking gen and spectrum analyzer, (which I no longer have
access to) I just mounted it on the ground cable, attached to
a 30' long-wire. I tend to switch to my 'active antenna'
if I'm above 20 MHz. (That can be because I used too many
wraps for higher frequencies).
My 'pre-amped' antenna is a 2' piece of copper pipe, feeding the gate of a MPF801 jFET. The project notation
claimed it works to 180MHz, but I use it on 480MHz with
good luck.
The balun'd antenna is a lot quieter, while doing a better job below 10 MHz. I never finished the antenna tuner project, unable to find the proper variable cap (one with an insulated rotor). To really test a L.W.balun though, a 'real'
long wire should be used, something over 80' or so.
And I'm still using a knife switch to disconnect and swap
antennas.

3899. Lightning Protection

Yahoo group: PCR1000
Date: 2005-08-31 22:08:12 UTC
From: johns317
Topic: 3899 Message: 3899

My PCR1000 was hardly a week old when I left it connected to my outdoor dipole antenna while I was away from home. Later that day I found it to be completely deaf. Apparently a passing thunderstorm had put enough EMF into the antenna to fry the front end. A trip to Icom service dept. confirmed that about $110.00 worth of parts and labor was needed to restore it to new condition. I have never had but one other radio ever damaged by lightning in the fifty odd years that I have been hamming, so it might be that the Icom front end is extra sensitive to EMF. I try to make it a practice to disconnect all antennas when they are not in use.

I had a 5 mounth old pcr1000 that worked great until one day a thunderstorm was passing by on the way to work. when i got home it was deaf on all frequencies. even though i have a well grounded diamond discone and inline lightning surge protector and also my pcr1000 is grounded. thank god icom fixed it under warrenty. so please everyone unplug the antenna when not in use!!!!!.

In the case of the blown out front ends and the like, I'd recommend utilizing a "blitz bug". These can be had from Polyphasor Corporation. Although they are expensive, some models are not, yet provide a high level of protection when properly installed and maintained. Another item to consider is the routing of your coaxial cables and power sources. Cross-coupling of EMF via the power can and will cause severe damage to the sensitive reciever circuitry of the PCR1K...
I should have my shack completed in about 10 days or so, and if I remember, I'll take pix of the layout and such and post them...

I feel bound to add that if struck by lightning you are liable to cop millions of volts. If you are near a strike to ground or in cloud discharge you are some way inside a plasma where the voltage could be into millions or down to nothing as the obvious least.
In my estimation you have to throw caution to the wind and hope you don't get in the high volts because everything you own could well be fried.
Whoever talked about loosing their front end would have been talking about being subjected to just a few volts, relatively speaking, and been lucky that it did no more than cook a few transistors.
It really makes me mad to see gadgets promising lightning protection, there is no protection, lightning discharge normally take the shortest easiest path(s). Even a lightning spike at the highest point on a building with a strap to earth is no guarentee, it just makes it less likely to blow a building to bits. Even if the spike and strap work, you are still liable to get side tracking.
Skips comment, wise as it might be, about 25KV, could come as something of an understatement.

Bob,
In some cases, yes. In the majority, no. Due to the nature of a EMF / EMP that is generated by a lightning strike, the EV potential between ground and source as well as the "ability" of these types of energy to bypass such equipment via loops makes it better to utilize a single point ground system and use Polyphasor suppression devices in-line with the coaxial feeds. (It suppose it wouldn't hurt to use the time tested method of a disconnection of ALL equipment, provided there was adequate notification.)
Dave

3911. PCR-1000 is indeed discontinued..

Yahoo group: PCR1000
Date: 2005-09-03 02:59:45 UTC
From: William Hayes
Topic: 3911 Message: 3911

I sent This Email to Icom: I understand that the IC-PCR1000 has come to an end of production. Is this so? And if so, what will be the replacement ? Thank You.. Bill Hayes.

I got This Responce:

Good Morning.....

Thanks for your e-mail.

You are correct in that the PCR-1000 is indeed discontinued. At this time, we have not been informed what (if anything) will replace this radio. I'm sure that there will a radio to fill our product line but it has not been announced as yet. Keep watching our web site for further news.

Best Regards;

Mike Hilton
Technical Support Representative

(My Next Question will be Why?)

I would guess that the PCR-1000 represents a very small niche in the Icom line, and the constant pressure for profit producing radios caused its demise. They propebly hope that hams will migrate to their high end computer capable radios. They most likely have not actually "made" any PCR-1000 radios in some time, and were just selling off the residual stock.

Icom never replaced the R-9000 or the R-8500 and I
wonder if they will replace the PCR-1000, I sure hope
so. would love to see one with better DSP, better HF
performance, wider frequency range and wideband IF
output. If not will have to buy an AR-5000.

3916. PCR1000 Sofrware - Bigger is Better.

Yahoo group: PCR1000
Date: 2005-09-05 00:47:56 UTC
From: William Hayes
Topic: 3916 Message: 3916

Hi All.
Thought I would give my 2 cents worth on the PCR1000 programs
I have tested.

~ Icom v2.2 supplied software is ok but You can't resize the
components with no gaps to make 100% use out of your screen.

~ Talker PCR v2.996 By QROSOFT LTD: some very good features like
save the Radio cmos, But still can not resize the Radio for full
screen use. And thoses STUPID REMINDERS/WARNINGS. You can't even
PAY THEM to make them go away.

~ Bonito Radio Com 4.5 - Universal Edition Demo.
Indeed, "You get what you pay for" $200.00 gets you the full
beautiful screen with all the bells and glamor, But I diden't seen
any way to save the Radios Cmos or RAM.. But if cost meens
nothing, this is my frist choice in software for the
PCR1000.

When it comes to Radio on My Screen. Bigger is Better.

Feed back any one? Thanks. Bill Hayes

3917. Re: will PCR-1000 be replaces, others werent

From: Lynn Hansen
Topic: 3911 Message: 3917

Well, for what its worth, I'm waiting for delivery of a slightly used PCR-1000 with DSP to start developing a Pocket PC/Bluetooth interface for it. It will probably be migrated into CTR-Remote (www.lynovation.com) with a spectrum analyzer display.

I almost decided not to do this radio since it is going out of production, but then I was reminded that I currently support several other obsolete rigs so this one is no different.

My primary interest in getting the Pocket PC talking to the PCR-1000 is for mobile/portable RF system troubleshooting since there are already plenty of good PC programs for this little gem.

Hi Lynn,

I visited your site and the product your offer is impressive. I, too, would like to see a bluetooth control program for the PCR-1000. If your arrangement for a PCR-1000 doesn't work out, I can arrange to loan you mine. It is about 4 years old with only about 20 hours usage and no DSP. But, hey, its yours to prototype with if you need it.

Bill,

If you like "Bigger is Better" you forgot to mention
"Ham Radio Deluxe" which you can make up to full
screen size, and is FREE

Cheers

Hi,

Have you tried RXPLUS from http://www.cam.org/~noelbou/RxPlus/

it includes DSP functions, can use ILGRadio and HFCC databases,
decodes HFFAX, SSTV, PSK31......

and relatively cheap at $79.99 to register for full version.

In my opinion well worth a look, even tho it is relatively young
program.....

> is there any other software to achive this??????

Yes, my PCR1000 is a couple of miles away on the top of a hill overlooking the busiest shipping lanes in the world, it's connected via WLAN link to a third party then ADSL to me. The latest versions of Ham Radio Delux allow client and server connections although you will of course need a PC at the other end. Not my first choice of control software but there aren't too many options for remote control and it is quite usable, AFAIK dxtuners don't release their linux software. Audio is delivered using Skype set to auto answer at the other end. Latency is very low, typically less than half a second for the audio to catch up with the tuning. Hope this helps and BTW, it is all very easy to set up.

Hello All,

Just to inform you,
I got an email from the finnish icom agent today, and he said that the pcr1k is out of stock (n/a from the factory), but a new
coputer controlled model is to be released early 2006. He didn't have more info, but he expects
docs within 2-3 months. All that he could say about it was that its technique seems to be very different (improved alot?)

Best regards

Mark,
I use both and have good results. I can really say that the tuner made the biggest difference.The 1 to 1 balun I had up in the air first the about a year later I added the tuner.

It'll probably be an entirely software configurable radio...which will be cool as all can be...!
dave
---------- Original message ----------

Hello All,

Just to inform you,
I got an email from the finnish icom agent today, and he said that the pcr1k is out of stock (n/a from the factory), but a new
coputer controlled model is to be released early 2006. He didn't have more info, but he expects
docs within 2-3 months. All that he could say about it was that its technique seems to be very different (improved alot?)

Best regards

Well,
It just goes to show you...when there's a good product that is being modified due to the lack of foresight on the part of the designers, the manufacturer will pull the product everytime...
my 2.5 cents worth...
dave

---------- Original message ----------
I would guess that the PCR-1000 represents a very small niche in the
Icom line, and the constant pressure for profit producing radios
caused its demise. They propebly hope that hams will migrate to
their high end computer capable radios. They most likely have not
actually "made" any PCR-1000 radios in some time, and were just
selling off the residual stock.

thats a "softradio".. you have a hardware
reciever..but EVERYTHING else,including the modulation
type(AM,FM,WFM,SSB,etc) is set by software... as in
DECODED by the soundcard,or a algorithm used that
"reads" the data through the serial port and outputs
it as audio. think of it as a analog-?digital->analog
converter...

NOT a reciever that gets "codes" to set it into a
certain mode.. but as in. the ONLY thing the rx'er
does is rx.. it does NOTHING else... there is a
broadband 10.7 Mhz tap that can be used in conjunction
with the computer to pull out anything it wants to....

3937. Problems with TalkPCR 2.92

Yahoo group: PCR1000
Date: 2005-09-11 16:23:10 UTC
From: iuverian@yahoo.com
Topic: 3935 Message: 3937

Hi,
Thanks for the informations I got the programs but
I've a problem.
With TalkPCR 2.4 everything works fine also the
bandscope.
With TalkPCR 2.92 I can't succed in make the bandscope
working. Every other rhings seems working fine.
I tried also the 2.99b version and everything was ok.
Can anybody give me help?
Thanks a lot

3938. Is there a Priority Frequency monitor every 2 seconds option?

Yahoo group: PCR1000
Date: 2005-09-13 15:44:07 UTC
From: jdrazorscooters
Topic: 3938 Message: 3938

I understand there is a priority bank option that monitors the designated bank every X number of scans of the other freqs.

My question, is it possible to set one frequency to be monitored say every 2 seconds? I have read my probe1K manual from front to back and back to front and see no options for this.

Sometimes other freqs start getting busy and I want to hear them BUT I want to monitor my main priority frequency every 2 secs to be sure there is nothing missed there.

Just like any other box scanner (pro 2006) or handheld. Most have a priority channel that can be monitored every 2 seconds if desired. Not by the amount of "X" scanned freqs.

As it stands now I only see an option to set a priority bank or priority freq to be monitored every X number of scanned freqs. This does not help much when a freq goes active for a longer period of time and it is impossible to monitor main freq #1 for activity unless I hit the manual scan (spacebar)

If anyone knows the setting in the menu let me know. I searched back posts and one user Ubbe said it was possible but didn't explain what to look for or what to set on said probe menu.

I am using probe1k V7.0

If you use TalkPCR there is priority scan as standard that will do exactly what you want

From: steve shore
Topic: 3938 Message: 3940

cant help with probe but talkpcr has an adjustable
priority scan to revisit a freq from 1 to 198 seconds
with a sample time from 2 to 127 ms and a hold time
from 0 to infinite. so it can do whatever you want.
and it can be for 1, 2 or 3 frequencies that are easy
to set while you are scanning or listening to other
freqs.

talkpcr is the best program I have found for scanning
and ease of use bar all, even those costing over $100
in my opinion.

If you want the world to have access to it then www.dxtuners.com and sign up to their network.

If you only want a closed group of friends to use it, install Ham Radio Deluxe at each end and use Skype or IPSound for the audio streaming. My current install is ADSL from here to a base station, then a long WLAN link to my remote site, from hitting a button here I usually get about 0.5 second lag before the audio catches up. HRD will only allow one concurrent connection so you wont all be able to tune it at the same time.

The dxtuners method isn't really easy.. You need a dedicated linux box running their server software, and their network is now pay-only, so you would be limiting the use of your radio by going for that method..
I would recommend Shortwave Log. This program is free, runs on windows, and can be used as a logging and local radio-control program. Its suited best to SWL use but works fine for VHF etc too. It works with many nice computer-controllable receivers. The best thing about it though is the remote control part.. You can connect with the shortwave log control client (windows only), or use the web-page control method. If you want, you can have your radio included on the list of public-access radios on the site. The developer is (or was) a member of this PCR1000 list.

Try SWLog @ www.shortwavelog.com It's free.

It's not too hard to setup. You will need web server software however, if you do not have WIN XP Professional, WIN 2000 Pro, or Windows Server 2003. You might want to look at Apache for that.

Hi Ron,

Yes I do. I live about 20 mi South of there.
The direct address is http://radio.teppodama.com
There are two options for access, one is via the Java control panel and the other is the ActiveX panel.

The Java panel gives you basic access to the receiver and the ActiveX gives advanced access.
Either way it is free access to all.

This receiver has been active for more than two years now with a good number of people accessing it daily.

Welcome to all and enjoy.

Cheers,

Cliff Owen

I'm new to this issue, therefore I don't quite follow what it means "to pull the DTR (pin 4) and RTS (pin 7) lines high on the RS-232 Serial port" - how can it be done?

The problem is that I use Ham Radio Deluxe to control my PCR-1000 receiver and when I close the program the receiver goes to sleep after awhile, but I need it to stay awake all the time.

Can anyone explain how it should be done?

From: g8bup
Topic: 3962 Message: 3962

Hi all,

I wanted a PCR1000, but the fact that it is running out of production is a bit off putting.
I rang the guys at Winradio. They refered me to a recent mil show, where a new 1.8GHz receiver was previewed. Apparently the professional version is now out, called a G315, and a cheaper hobby version will be out in a month, price guide about the same as the existing 1550 product, but a full SDR.

Money in the piggy bank for me for now, sounds neat.

John

hello,

What's your choice between PCR1000 and IC-R20? and Why?

IC-R20 reference:
http://www.icomamerica.com/products/receivers/r20/specs.asp

thank you!

3965. Re: choice between ic-r20 and pcr1000

Yahoo group: PCR1000
Date: 2005-09-24 14:54:40 UTC
From: John Taylor
Topic: 3964 Message: 3965

It would be a bit difficult to make a choice between two very different types of radios. The PCR-1000 is strictly a computer controlled receiver and the IC-R20 is a handheld portable, designed primarily for scanning use. The R20 has a much broader frequency coverage according to the specs, but is it conducive for computer control? Are there a lot of programs out there to control it? What is the planned usage of the device? What environment do you plan to use it in? These are the types of questions that must be answered before determining a choice ....

Subject: [PCR1000] Bonito Software 4.0 4.5

Hi am looking to get a free version of this software and try it out.
I have the demo version.\I would like to try the real version and see
how well I can make it work here.
Thanks

Hi!
We are Professional website Developers and we've developed commercial and personal websites of all categories such as e-commerce, Lawyers, Detectives, Data Recovery, Forensics, Musicians, Exporters & Importers, Schools & Colleges, textiles, doctors & Hospitals and many more

We Provide cost saving Offshore Development (outsourcing) Services. If you want to have a Commercial or Personal website you can have it for very low price.

Please have a look on our Website Development Packages on following link of our website:

http://www.ddipro.com/ddipro/web-designing.html

We also Provide Software Development and Testing Services. To find out the details of our services, Please visit our website link:

http://www.ddipro.com/ddipro/services.html

For any query or comments, Please feel free to mail me at tt@...

Regards

Tarun Tyagi,

This list has been dead for a while please wake it up.
I am looking for a copy of the Bonito soft ware to use I don't want the demo is there someone who has put a copy of the 4.0 or 4.5 in the down load section some where.
Thanks

The main problem here is that this group is unmoderated. there is another PCR1000 group which is moderated. The best way to deal with these people is to report them. I did.

If you want to join the other group send a mail to the address below.

ICOM_PCR1000-subscribe@yahoogroups.com

The onwer and moderator can easily ban those who abuse the group.

Cheers

Bill (moderator of the ICOM_PCR1000 group)

Hi

Can anyone tell me which is the best IF filter setting for NOAA APT sats

the 15khz seems to give more coverage but then the IR pic is very poor

I'm using Wxtoimg decoding software

All the best Chris

Chris, the WXtoIMG software can control the PCR1000 directly and can do the entire process .... the key is to have the correct type of antenna for those frequencies and polarization. It has also been helpful to me to have a preamp on the antenna to boost the signals from the sats. The software can tune, receive, then capture and decode the images in a variety of formats for you.

Hi Chris,

I use the 50KHz filter with FM (not WFM) and I have AFC and AGC turned on. I don't know how much the last two settings matter but I do get great pictures with WXtoIMG. I am using a 2 mtr Amateur radio satellite beam for the receiving antenna which seems to help a lot.

Hi
Thanks for the advice Tom and John
I am using a "turnstile" type antenna in the attic
the pics on NOAA 18 and 12 are good but NOAA 17 is weak
even when it is directly overhead , Would ajusting the horizontal elements of the antenna affect reception?

Chris

What program or software are you guys using?
I was thinking about buying the Bonito software 4.5 or better version what here you say.
I got this PCR-1000 working pretty good with the original software but would like to see the weather sat and all the other things I might be missing.

Hi Matt,

I'm using WXtoIMG -- the free version at: http://www.wxtoimg.com/

I think its better then WXSat but both work ok.

Hello Chris.
I checked to see if there has been any reports regarding NOAA17 output but there dont seem to be any problems.

Certainly any thing you can do to improve the effectiveness of the horizontal ground planes will alter the vertical reception lobes.

Are you operating with an aerial amplifier ?

I used to receive what I thought were reasonable pictures and always tended to dismiss the idea of amplifiers in case they increased the noise, but I did finally try one and was absolutely amazed at the results.

Where are you based ? I am on the south coast of england and can receive the NOAA's from about Algeria and lose them usually just short of Iceland although under faverouble conditions, have received them right up until they are just over the Greenland coast.

Going back to your NOAA17 problem, I think working with a 50kHZ bandwidth would assist a great deal.

Hi John
Thanks for the tips
I'm based in Dublin Ireland I was getting great pics from NOAA17 on the midday pass like on a good day from the Canary islands to iceland but recently I only get from north of France to Scotland clear 18 and 12 are fine
What type of amp are you using?

All the best
Chris

Cheers all weather sat enthusiasts,

I'm developing an APT decoder my self, it is free GPL-licence.
Unfortionally this decoder does not yet support the pcr1000, and this was the reason why I signed up on this board (in hope of buying one).

I uploaded a new version today Tue, 11 Oct. Here's a screenshot of the new feature, The Swath Viewer, http://www.ptast.com/apt/decoder/images/swath_vr.png

This software is still work in progress but I'm getting there ....

Here is the log it produces http://www.ptast.com/apt/logs/daily/index.html
And its home page http://www.ptast.com/apt/decoder/index.html

Feel FREE to download...

btw, I'm using the R2FX-receiver and an coax tall and narrow QFH-antenna
My station setup http://www.ptast.com/apt/station/

Best regards
/patrk, finland

Hi all,
I can control and change freqs and stuff using
shortwavelog control program but all i get now is static.
It seems as though the sqelch isnt working right or something has gone
wrong. i programed the 1000 to listen to 146.52 and i keyed up
my hand held, but nothing but static comes thru...
should i send it to icom and have them fix it?, is there a way
for me to flash the eprom inside?, if i do send it to icom, how
much do they charge to fix it? if not icom, does anybody
know who else to send the radio to that will not cost me an arm and a
leg? I love this radio and i want her to come back to life!

Thanks,
doc

I think you pretty much pegged it there..the front ends on the PCR1k are VERY sensitive to ESD,if you have a longwire on it, I wouldnt be surprised, there have been quite a few people that have "lost" their PCR's that way...

9 months?

Is it still under warranty?

Hi Doc,

I believe the warrenty on the PCR-1000 is one year so you should send it back to Icom if you've only had it for 9 months. Call them first.

When you get it fixed you might want to get a copy of TalkPCR and save a copy of the EEPROM to a file on your computer so you can reload if it is a firmware problem. TalkPCR is freeware -- cheap insurance.

Tom

How loud is the noise coming from the PCR .
I bought one and the front end was blown I replaced an open 1k resistor and open diode and now I am back up and running.

I bought it used from somebody else, I meant to say that only "I"
have had it for 9 months...The rig is prolly a couple a years old now...

Front end it prolly is darn it....yep, had it hooked to my tri bander
up at 100 feet...to much gain on the front end i suppose...anyway...do
any of you guys know who to send it to other than icom to get her fixed?
tnx!

Mine went completely dead a few years ago. It lit up but the computer couldn't find it. I checked the power supply and found that the voltage was down to about 9 v (as I recall). I plugged in a regulated supply from an old laptop and it's been working fine ever since. (watch the polarity if you do this)

4005. [PCR1000] Weather sats

Yahoo group: PCR1000
Date: 2005-10-14 01:49:50 UTC
From: Chris Bailey
Topic: 3977 Message: 4005

Hi,

i have a question about the images i am getting form NOAA 12, 15, 17 and 18. I get very good reception and data but they seem to be missing something called "sensor 4 inage" the images that that i get are outlines of the Western US and Mexico on a black background. I do not see any clouds or water in the image. Can anyone tell me what i might be doing wrong?

Software is WXtoImg

Hello Chris,

I suspect that you have either set your recording signal level to high or low.
Here is a free tool to setup/check your signal level

http://www.david-taylor.pwp.blueyonder.co.uk/software/audio.html#SatLevel

WxtoImg has a signal level readout, the "vol: xx" bottom right of the display. If you set the levels so "xx" reads around 50 then everything should come good. The excellent documentation that comes with the program explains all.

There isn't a lot of contrast in the Sensor 4 (infra red) image, but you'll see some detail there with the correct sound level, and WxtoImg allows you to process the data for a better display.

Hello Peter,

I checked the level and it has been between 40 and 60 in the green on each one. I also do not get any sensor 1 or 2 data. I will try using this tool when i am back at my radio on Sunday, thanks

4009. Scan Rate

Yahoo group: PCR1000
Date: 2005-10-14 21:57:40 UTC
From: Paul Amos
Topic: 4009 Message: 4009

What is the scan rate of the PCR-1000?

I want to scan 100 channel banks of AAR channels

Thanks

Paul

4010. Re: Scan Rate

Yahoo group: PCR1000
Date: 2005-10-16 00:47:08 UTC
From: Robert Sillett
Topic: 4009 Message: 4010

I don't believe that there is any fixed rate, per se, for the
PCR-1000. It just depends on how efficient (or not) a particular
software program is.

The PCR-1000 runs at 38.400 bps, so there is very low latency over the
serial port connection.

Bob

You could give me a shot at it but if Icom is the way to go that is fine.
Sounds like your front end is deal.
Maybe static input did it.

Using PROBE1K which is the fastest of the programs that will run the PCR-1000 we have found that appx. 40 channels per second to be top scanning speed for the radio. Although PROBE1K will run faster, the radio will not lock onto active frequencies.

PROBE1K works in the 25 - 1300 MHz frequency range of the PCR-1000. Using PROBE1K's other features that you are able to be use including multiple priorities and difference combinations of priorities there is no better program.

http://www.probe1k.com/

Scott, before you send it to anyone, there is one more thing you should look at that I have not seen anyone post about. Check to make sure the "bandscope" function is NOT turned on. This will kill reception in just about all modes except maybe AM and WBFM. It may be called something else in your software but the function is the same and can cause the audio to be completely lost. A simple check before springing for the lost time and bux ....

Peter,

i used the tool and set the audio to match the level on tht tool but it
did not help. i now get a warnning about a narrow bandwidth or low S/N
or volume to high. the images are not anywhere as good as the one before
making this change. The bansdwith i am using is 50 Khz. i will try a
15Khz bandwith and see if that makes a differance. other wise i will
just keep playing with it and see what i come up with. Thanks -Chris Bailey

I am looking for a Pre amp also, and if possible a supplier for a prebuilt QFH (mine is not the best as a first attempt to build it)

It works, but I get a lot of fuzzy images.

You might try the LNK-137 from Hamtronics: http://www.hamtronics.com/

I believe it is $59 and should be fairly easy to install. I would recommend installing it at the antenna (put it in a plastic box if its outside).

4018. Vedr. [PCR1000] Scan Rate

Yahoo group: PCR1000
Date: 2005-10-17 05:45:05 UTC
From: Arcticpeak
Topic: 4009 Message: 4018

The scan rate of the PCR1000 is about 20-25 channels per sec.

Paul Amos <amosp@...> skrev:What is the scan rate of the PCR-1000?

I want to scan 100 channel banks of AAR channels

Thanks

Paul

I am looking for a Pre amp also, and if possible a supplier for a prebuilt QFH (mine is not the best as a first attempt to build it)

It works, but I get a lot of fuzzy images.

Depends where you are. SSB electonics in Germany make a good one.

Cheers

4022. CTR-Rcvr v1.00.04 - updated version with faster bandscope

Yahoo group: PCR1000
Date: 2005-10-23 19:48:46 UTC
From: Lynn Hansen
Topic: 4022 Message: 4022

Hello,

I've just uploaded a new version of CTR-Rcvr, my PCR1000 Pocket PC control program. The lastest version includes a much faster bandscope and several minor bug fixes.

Also, PCR1000 adapters are now available for CTR-BlueAir, visit my web site for more information.

www.lynovation.com

Thanks,
Lynn

4023. Technical advisory

Yahoo group: PCR1000
Date: 2005-10-28 01:58:37 UTC
From: ptckrs
Topic: 4023 Message: 4023

Hi friends, I´m sufering with a problem with my receiver.
Tonight (10/27/2005) when i´m turn on my IC PCR1000 for listen the SWL like all evenings, I can´t hear nothing, only a noise and two powerfull FM stations located near my home.

I´ve checked the connections of my antenna system and all things works fine, I´ve try to change the antenna system and no signal again, even using the internal supplied antenna that came with radio set, nothing works.

I think the radio "losts" the sensitivity, and i´m very sad with it. I using an external antenna and when the radio is turned of, i disconect the antenna and the power supply, even when its in use i use the power supply connected to a no-break and surge protector, my radio and computer only works when the weather is not thundering.

If someone have any idea that can help me like, advices, tricks or anything else, thank´s a lot.... very much.

Best Regards an 73´s.

Sincerely,
Paulo Tadeu de Castro

Are there separate scanning commands, while writing own program, for PCR, or one has to just keep on changing frequencies fast?

4025. Re: [PCR1000] Scanning commands

No SCAN Command - just keep sending out next
desired frequency.

I am using VB6 to program PCR1000. I found that scanning speed by sending next freq is not as much as the speed of original PCR software, I am using ASCII format of commands. Are there any binary format of commands?

Paulo
I think you may have blown the front end of your receiver.
when you take your antenna off and then before installing your antenna you should ground the antenna before installing it on to you PCR-1000.
There may have been a static charge on your antenna and you may have zapped your front end of the receiver.
that is what happened to mine and I had to replace a diode and resistor to get it working again.
I hope you have someone close that can repair for you.
I can do it here I the US but might be a lot of money to send it here and then send it back.
See if there is someone local who can fix it for you.
Matt

Thank´s Matt and Hanz,

I´m very afraid about that you say Matt, but I believe you´r right, here in Brazil we are entering in the thunderstorms season that goes until march/2006 and remembering some facts, i forgot to disconect the antenna a few past nights, even when that night doesn´t rain but the atmosphere may be heavely charged.

I just don´t wanna believe this! Just now that i made a new VHF antenna to listen the sats... what a miss.
So, my new job is to find out a good repair store to fix my little budy, here in Brazil, but if I can´t find it here, i send my ICOM to USA, you bet.

Hanz, yes, i have the eeprom´s backup and i try to restore it with no lucky... it seems like Matt told, a damage in the "hardware" not in the "software".

If someone have the service manual or the schematics diagram for this jewell and can send me via e-mail, many thank´s a lot.

73´s Matt, Hanz and the forum.

From: al_pennyworth
Topic: 4033 Message: 4033

I am working on small application that will be able to handle the PCR1000. I have most things working but I am having a definite problem with the signal strength. All the "unofficial" documentation that I can locate says to poll for the signal strength using "I1?" or "I1\?". But when I poll with either of these values, I do not receive anything in regard to the signal strength. Has anyone else had any problems with the signal strength polling? Any have any ideas or suggestions?

From: Noel Bouchard
Topic: 4033 Message: 4036

Hello Al & Group !

Yes the signal strenght command is: "I1?"
.. not "I1\?"

You should get this reply:
'0x0A' I1xx<CR><LF>
That is 6 OR 7 chrs (the leading LF (0x0a) may not be there ...)
The signal (xx) is a HEX representation of the signal strength.

Make sure you issue a "Output Control Off" command first:

"G300<CR><LF>"

Note: The PCR-1000 firmware is tricky to work with and has
a few quirks which makes it one of the worst PC controlled firmware
i have worked with .... so be patient ... Good luck !

I hope this helps ...

I have used the Icon 1000 for several years without any problems. I know it was originally based on Windows 95 and eventually they upgraded so my Windows 98 could handle it.

I am about to buy a new Dell Computer with Windows XP. Can I still use my ICOM 1000?

4043. Re: New Computer - Windows XP

Yahoo group: PCR1000
Date: 2005-10-29 21:21:57 UTC
From: John Taylor
Topic: 4037 Message: 4043

Just to be clear ... all of the programs I know of for the IC-PCR1000 will work just fine with Windows XP, but you need to make certain that your new computer has the needed communications ports. Many of the newer computers, especially laptops, are not coming with what used to be the normal port compliment. Some are missing serial ports, and many are missing parallel (LPT) ports. The PCR1000 requires a serial port. I do not know if any of the current software supports reassigned USB 2.0 ports or any such thing for USB-to-serial adapters, or if it would even be required. Again, make certain your new computer has at least one serial port, and preferably assigned to one of the more common designators such as Com1 or Com2, etc. The software should not be a problem in XP.

Hope this helps,

Hi....

I'm quite interest to get this one. What's about its working condition? And is there any install option - UT160 DSP unit?

Thanks

4048. CTR-Rcvr and CTR-Server updated

Yahoo group: PCR1000
Date: 2005-10-30 17:12:12 UTC
From: Lynn Hansen
Topic: 4048 Message: 4048

Hello,

I've posted an update to CTR-Rcvr. The new version enables the operation of the bandscope on TCP/IP and Wi-Fi connections and fixes several other minor bugs.

I've also posted a new version of CTR-Server, my TCP/IP serial port server for the CTR product line. This update includes a new option to leave the serial port active when in Listen mode. This allows the PCR1000 receiver to remain on when you go off-line on CTR-Rcvr.

You can download these programs from my web site, www.lynovation.com.

4050. IP1kC updated + new IP1k2

Yahoo group: PCR1000
Date: 2005-11-01 10:59:00 UTC
From: jjintokyo
Topic: 4050 Message: 4050

Dear All,

First of all, I would like to thank you very much for sending me so many e-mails from all over the world to tell me how much you like IP1kC.

Sorry if I wasn't able to reply to all, but the two most common questions were 1) Do I need a Null Modem Adapter to connect my Palm with my PCR1000 / PCR100 ? and 2) Would you please send me the source code of IP1kC ?

Well, I'm pleased to answer YES to both questions.

YES, you do need a Null Modem Adapter and YES, I have decided to release the full source code.
Maybe somebody with more time than me will pick up from here, improve IP1kC and share it with the community :-)

http://www.geocities.com/jjintokyo/

Oh and check out my new IP1k2 page. It is a simple Windows version, but it does what I need and does it well. Also provided with the full VB6 source code.

http://www.geocities.com/jjintokyo/vb6.html

Please keep sending those e-mails. It is your words of support and encouragement that keep me going.

LONG LIVE THE PCR1000 + PCR100

JJ in Tokyo.

4054. PCR 100 vs PCR 1000

Yahoo group: PCR1000
Date: 2005-11-01 23:23:15 UTC
From: solarwavecdn
Topic: 4054 Message: 4054

I am new to the group. Just joined.

I have been fascinated with airplanes all my life. Listened to my dad's scanner when I was a kid and owned my own handheld (RadioShack) for a long time.

I have been reading up on the latest technology and I am intrigued with the PCR 100 & PCR 1000 (realize both discontinued now). I have been watching eBay and seen quite a few moving.

My goal is to set up a home station and control through a designated computer. I am a bit puzzled though and hoping somebody could help.

The PCR 100 has AM, FM, WFM. The PCR 1000 has AM, FM, WFM, SSB, SW. Both have 100kHz - 1.3GHz. The frequency range allows reception of aircraft but if I understand correctly, require SSB also. Does that mean that the PCR 100 does not pickup aircraft?

My long term goal is to interface this with the internet so that others can tune the receiver themselves.

Thanks in advance for clarification.

4055. Re: PCR 100 vs PCR 1000

Yahoo group: PCR1000
Date: 2005-11-02 01:18:00 UTC
From: John Taylor
Topic: 4054 Message: 4055

Grahame, actually you have already listed the differences between the IC-PCR100 and the IC-PCR1000 ..... as you said, they both can receive AM, FM and WFM, but only the 1000 can also do SSB and CW. This is the essiential difference.

Now, to your question regarding aircraft signals .... most general aviation aircraft worldwide use AM as the primary operation mode, but there are some exceptions ... for example ... some commercial long haul carriers use SSB when in transcontinental flights, and the military also has some encrypted modes that neither of these receivers use. Especially when they switch to spread spectrum secure mode.

So to answer your question, you can indeed receive most normal aircraft comms with both units, but to pick up the long range flights, you will need the PCR1000 ....

Some of the long haul carriers are switching to satellite comms which with the appropriate antennas, you can also listen in to some of it ....

There is one other difference that I have heard, but do not know if is actually accurate.... some say the PCR1000 has a bit more sensitivity than the PCR100 ... but I don't think the specs bear this out ....

I have both units and normally just use the PCR1000 ....

Hope this helps,

John

Forgive me
I don't know what this IP1Kc is.
I have a PCR-1000 is this the software like TalkPRC?
if so I would like to give it a try if it is better and can do more.
I was hopeing that someone could supply me with the Bonito software I that looks to be really interesting.
I am I right about Bonito that it can decode CW and RITTY?

John & Robert,

Thank you very much for your replies.

Now that I know a PCR100 will do the job I can at least bid on one knowing it will provide what I need. My preference would be to get a PCR1000 for the extras it provides, but at least it is not a must.

I am presently bidding on a PCR1000 on eBay. Auction closes this afternoon, so I will know today if I own one.

Will be in touch.

I am now the proud owner of an ICOM IC-PCR1000.

Comes with:

RS-232C serial cable

updated software ver.2.2 on CD

Antenna

Power Supply

Looking forward to receiving it and getting it up and running.

I want to purchase/construct an outside antenna. From what I have read, a dipole or an inverted V seem to be suggested for "general reception". Thoughts on this?

Regards,

Grahame Booth

Hi Grahame
enjoy your purchase as it will serve you well.
Initially back up the eeprom ,should it become corrupted then you can
reload it.
Also use some static protection in the antenna lead or have an isolator
when not in use.
cheers

From: ruthdelventhal
Topic: 4060 Message: 4060

Even though I have a very hectic schedule, I felt compelled to take the time and share this with you since someone else took the time to share it and I benefitted from their efforts. A woman recently posted a message stating that she saw a tv show for the company located at http://savemorethanever.com She praised it very highly and I decided to join. I signed up for the sampler and it is the best thing I ever joined! The savings have been huge and the online mall is amazing. Just yesterday I was able to finish all of my holiday shopping without leaving my chair. They currently have everything at savings between 50% - 75% off. With the grocery coupon book I picked up a full cart of groceries for under $10.00. I have never been able to buy so much and spend so little!

Hi!

I am Tarun Tyagi, Author of Book, "Data Recovery with & without Programming"

(http://www.prodatadoctor.com/author.htm)

I Provide Online Professional Data Recovery Trainings for Physical and Logical Disk

Problems... You can Learn Professional Data Recovery from ANYWHERE in the world.

You can watch on your computer Screen LIVE and learn how I safely open a hard disk without

clean room to transplant internal components of crashed hard disk to recover its data. Find

the Details on:

http://www.prodatadoctor.com/drcguide.htm

There is NO NEED of CLEAN ROOM AND OTHER EXPENSIVE EQUIPMENTS for Data recovery by using my methods.

If disk is Physically Bad even Then Data Recovery is Possible and you can Recover Data even

if:

Head Crash

Hard disk Not Detected by the BIOS

Logic Card is burnt

Clicking Sound

No Spins in the disk platters

No Access of the Disk

Disk not detected by the system

Servo Problems etc

Trainings cover all the professional data recovery concepts including Physical & Logical

Data Recovery and Data Recovery from Various media such as, Hard Disks, PEN Drive, Zip

Drive, iPOD, Digital Camera, RAID systems etc.

For any Query or more details, feel Free to mail me.

Regards

4063. to the moderators

Yahoo group: PCR1000
Date: 2005-11-04 21:46:31 UTC
From: John Taylor
Topic: 4063 Message: 4063

As a group moderator/owner myself, I know that time is not always available to devote to the group. I am not fussing at you, the moderator(s), butat those that abuse the openness that is provided to everyone.

To those that routinely join every possible group and post their blatant spam, curse you. Do you not realize that we, as a group, did not come to this place seeking your products and/or services? I am sure you are just playing a numbers game by depending upon percentages. Yes, no doubt there will be some that will respond to your stuff and you are willing to do harm to everyone else for your own selfish greed.

To the moderators, one of the things we have been forced to do in other groups in an effort to curb this behaviour is to either "moderate" all new member messages till motives can be ascertained, or to make membership by approval only. One way that was done was to develop certain rules about new memberships, one of which was to not approve new members with only web based contact information until their identity could be verified in some fashion. This was done to protect our existing membership from this type of abuse. It is so unfortunate, but it was in the best inerest of the group.

I am not in any way trying to tell you how to run your group, but as a regular member, I am simply requesting some help in trying to eliminate this sort of abuse from the membership, and offering some potential methods to mayby curb it some.

Thanks you so much for the service you are providing,

John

From: grem467
Topic: 4065 Message: 4065

hey guys, took this one in on trade and dont need it.

its in EXCELLENT shape and i guarentee it to work and look great! I have all the cables for it, power supply, antenna, the users manual (PDF) and software downloaded for it (i suspect you guys already have that though).

As stated, i have fully tested it and will guarentee it works great on arrival.

looking to get 300.00 plus a bit for insured and tracked shipping (sorry i wont ship without tracking or insurance, as it protects both of us)

This unit does not have the optional DSP installed in it.

any questions, please contact me.

Thanks!

John,

As one of the moderators on the moderated PCR1000
group, I agree with all you are saying.

However, this group is not moderated, hence anyone can
join at our peril.

As regards to the 2 spam mail last night, I reported
them to Yahoo.

Cheers

4068. Outside Antenna

Yahoo group: PCR1000
Date: 2005-11-06 20:07:56 UTC
From: Grahame Booth
Topic: 4068 Message: 4068

As I impatiently await the arrival of my PCR1000 I have been giving a lot of thought and searching the internet regarding outside antennas.

I have some options and would like to get some feedback please:

1. I could run a longwire between the house and a tree in the backyard, which could be approximately 80 feet long if I use up all available space

2. I could run a longwire "V" between a tree in the backyard and a tree in the front yard, which would be approximately 110 feet long. Is it necessary that both legs of the "V" be the same length and the same height? The house does not sit in the middle of the lot.

3. I could run an inverted "V" on the roof of the house

Your thoughts are appreciated as I am very new to this.

Regards,

Grahame Booth
Calgary, Alberta, Canada

4069. Re: [PCR1000] Outside Antenna

From: C. H. Weis
Topic: 4068 Message: 4069

Dear Grahame

To decide about selecting between your options 1,2 and 3, I would suggest that you use the trial and error method. You should remeber that they are indicated for longer wave lenghts and they are almost "deaf" in the directions of the wires and the maximum gain is in the direction perpendicular to the vertical plane containing the wires.

For shorter wavelenghts a good choice would be a DISCONE antenna. This an omnidirectional and very broadbanded antenna. Icom offers a model and MFJ Enterprises offers a cheaper model covering from 25 to 1300 MHz as adverized in QST magazine October 2005 pag 155 bottom or go to http://www.mfjenterprises.com . Such Discone antennas can be fixed over the roof of the house or even in the attic. It is not difficult to assemble a home made version of a DISCONE as described in the ARRL Antenna Handbook or in the RSGB VHF UHF Manual.

4070. How to produce a backup copy of the PCR1000 EPROM

Yahoo group: PCR1000
Date: 2005-11-06 21:06:11 UTC
From: C. H. Weis
Topic: 4070 Message: 4070

I read somewhere that it is very wise to save a back up copy of the contents of the PCR 1000 EPROM. Such a backup would be usefull to restore the contents of this EPROM if by any misfortune it got corrupted.

However I could not find instructions on how to get such a back up and how to use it . Many thanks in advance for any instruction about this.

Best regards de Germano, PU2NTC in GG76BT (23.1989 S; 45.9009 W)

4071. Re: [PCR1000] How to produce a backup copy of the PCR1000 EPROM

Yahoo group: PCR1000

Get a copy of TalkPCr (now freeware) - there is a
yahoo group which has the software in the files
section to subscribe send a mail to:

TalkPCR-subscribe@yahoogroups.com

I am currently using version 2.99d, but you will get a
nag screen - read the various mails about patches etc

Hope this helps

Bill

4072. Re: [PCR1000] Outside Antenna

Yahoo group: PCR1000
Date: 2005-11-06 20:57:55 UTC
From: nt1g@comcast.net
Topic: 4068 Message: 4072

Antenna geometry isn't quite as important for receiving
antennas as it is for transmiting antennas, but one thing
you'll want to do is to protect your PCR from static discharge. One of the most effective methods used with
outdoor television antennas is a D.C. shunt, or a bypass for
the 'static' bolt, more commonly called a balun. A 1:1
balun at the apex of your inverted vee will do the trick,
though the antenna will tend to favor certain bands over
others.
Perhaps an optimal RX antenna would a 80' longwire,
with a WinRadio(.com) LWA-1 longwire adapter balun,
and a good ground rod, to ground the LWA.
A good ground sets up the noise floor of your radio.
A poor ground (or no ground at all) is like driving on a
highway that needs to be repaved.
A good ground provides a sensation that is similar to
driving on a smooth, resurfaced roadway. Plus is provides
a path for any static discharge without entering on the coax.
Palomar Engineers also provide a similar 'balun', also
claining a greater (80MHz) bandwidth.
Either are around $50.
Good luck and 73,
Skip

4075. Callsign lookup added to CTR-Rcvr

Yahoo group: PCR1000
Date: 2005-11-13 03:07:48 UTC
From: Lynn Hansen
Topic: 4075 Message: 4075

Hello all,

I've just uploaded CTR-Rcvr v1.02.00 to www.lynovation.com

This update includes an exciting new feature, ham callsign lookups(from QRZ.com). You can now lookup any call from within the program.

There are three ways methods you can lookup calls:

1. Manually lookup a call from the File -> Callsign Lookup menu

2. Manually lookup a call in the Log Edit window. Once found, you can enter the data into the log entry with a single click.

3. Automatically lookup DX cluster spots by selecting the Auto Call Lookup option in the DX-Options menu. This option will display name and QTH data for DX cluster spots as they come in.
I hope you'll find this new feature useful, I certainly have!Let me know if you have any questions or other suggestions.Thanks and 73,Lynn

4076. ICOM IC-PCR1500?

Yahoo group: PCR1000
Date: 2005-11-14 10:51:08 UTC
From: Arcticpeak
Topic: 4076 Message: 4076

Hi
I have heard a rumour that ICOM is going to replace the IC-PCR1000 with a IC-PCR1500.
Are there anybody who know more about this?
Is it just a rumour or is it true?

I haven't had a chance to take a look-see yet myself, but
most of these guys over in JA have the scoop...

I was at Pacificon last month and specially asked one of
the Icom reps there if there was going to be a new RX
coming out since the PCR-1k had been discounted.
He stated that the RX market was really small, mostly
Gov't, and that nothing in the works at the time...Guess
he was wrong!

Later,
Todd KH2TJ

4078. Re: ICOM IC-PCR1500?

Yahoo group: PCR1000

From: John Taylor
Topic: 4076 Message: 4078

At $575 for this new beast, I suspect it is going to need more additional ammo in it's arsenal than just the expanded frequenct coverage to 3.3 gHz. Also looks like SSB/CW is only good in the range of 495 kHz - 1.3 gHz .... which would serve the amateur community.

Yes, this is nice, but only VERY specialized antennas will even be useful above the normal UHF range. Yes, it would be handy for say the 1.6 gHz wefax stuff and the like, but again, the antennas are highly specialized which will work against the "broadband utility" objective of the receiver ....

c'mon ICOM, give us some useful info to at least get our appetite whetted ....

John

0.01- 3299 MHz AM, FM, WFM
0.495-1300MHz CW/SSB
USB connection;
I'm guessing $550.00
(still cheaper than a Winradio...)

From a google translation:
It is possible as for reception frequency, 0.01 - the 3299.999mHz (AM and FM, the WFM) as for 0.495 - the 1300MHz, to correspond to also the SSB and the CW, to receive the aeronautical radio and various business radios, the amateur radio and various broadcasts et cetera. In addition, the USB it is adopted for interface by the fact that, transmission speed of the data the UP. Operation feeling and picture indicatory speed have improved. Furthermore, multichannel monitor function, function in order such as the colorful reception support function such as the band scope and IF shift to receive the comfort, more efficiently and the scan mode which is complete is fully loaded.

Because this product is the receiver of personal computer operation type, you state also the hardware requirement which becomes matter of concern.

Windows XP Professional
Windows XP Home Edition
Windows 2000 Professional
Windows 98 Second Edition

As for main component,

It is the substance antenna AC adapter USB cable CD.
* The antenna of attachment is the simple antenna. There are times when the antenna of marketing becomes necessary depending upon reception frequency.

Price XXYEN is 62790 (including tax .

As for arrival, being quick

4084. Vedr. [PCR1000] Icom IC-1500

Yahoo group: PCR1000
Date: 2005-11-15 14:22:50 UTC
From: Arcticpeak
Topic: 4079 Message: 4084

By looking at the specs, the receiver section seems to be very much the same as that used in the IC-PCR1000. (The same IF's etc...)
The wide coverage is as usual a brag coverage, as the sensitivity decreases above 1,3 GHz.
One interesting function is the ability to listen to both duplex channels at once, and it also seems that the audio can be recorded via the USB cable.
The IC-R1500 version has it's own control head.

Martin

0.01- 3299 MHz AM, FM, WFM
0.495-1300MHz CW/SSB
USB connection;
I'm guessing $550.00
(still cheaper than a Winradio...)

From a google translation:
It is possible as for reception frequency, 0.01 - the 3299.999mHz (AM and FM, the WFM) as for 0.495 - the 1300MHz, to correspond to also the SSB and the CW, to receive the aeronautical radio and various business radios, the amateur radio and various broadcasts et cetera. In addition, the USB it is adopted for interface by the fact that, transmission speed of the data the UP. Operation feeling and picture indicatory speed have improved. Furthermore, multichannel monitor function, function in order such as the colorful reception support function such as the band scope and IF shift to receive the comfort, more efficiently and the scan mode which is complete is fully loaded.

Because this product is the receiver of personal computer operation type, you state also the hardware requirement which becomes matter of concern.

Windows XP Professional
Windows XP Home Edition
Windows 2000 Professional
Windows 98 Second Edition

As for main component,

It is the substance antenna AC adapter USB cable CD.
* The antenna of attachment is the simple antenna. There are times when the antenna of marketing becomes necessary depending upon reception frequency.

Price XXYEN is 62790 (including tax .

As for arrival, being quick

From: kd5dga@isot.com
Topic: 4079 Message: 4086

Did you guys noticed two things that are included with the 1500/PCR1500.
USB cable and detachable face plate.
I think that the R1500 is the stand alone unit and the PCR1500 will be all
the goodies with it.
3.3 ghz is not too shabby. But what can you really find above 950 that is
worth while?

I am thinking there is only one radio unit. The PCR1500 is the receiver and the R1500 is the control head for the PCR1500 when used mobile and no PC is available.

For DRM it is best to get a dedicated shortwave radio.
Wide-band scanners are always a compromise, because the VCO
needs to have a very wide range, hence much larger phase noise.
Having very low phase noise is very important for DRM, especially
if you are DXing.

that is worth while?

Video links in the 2.4 GHz band, but that takes really good S/N to get a decent picture. Good band though, lots of surveillance cams and tracking there. Had fun years ago watching the 2.4 GHz feed from a nose mounted camera in a F-86 target drone. Had a pilot in it at the time, and we watched as he broke over the field and landed. Was testing a UAV camera downlink when I happened to tune in the F-86 video.

I thought the same thing when I saw that. Not that you can't trunk track now, with the excellent program TrunkPCR, but the ability to monitor the control channel constantly while tuning to the traffic channel might be very helpful! Does this mean it has a secondary VFO????

No, it's more or less like the IC-R20 with dual receivers.

Ubbe.

I fail to see (no pun intended) how you can receive and demodulate
video on a narrow-band classical mode receiver like the PCR1500. I
believe the original question still stands...

Neither the PCR1000 nor the PCR1500 have 10.7 MHz output.
Even if it did, you would still need to supply your own demodulator,
so this is not really an answer. The original question still stands.

4100. Re: Vedr. [PCR1000] Icom IC-1500

Yahoo group: PCR1000
Date: 2005-11-17 04:10:27 UTC
From: John Taylor
Topic: 4079 Message: 4100

The question is indeed still standing. I fail to understand the relevance of the frequency of the IF section, even if an output at IF is provided. This still does not reflect anything to do with the bandwidth, only the frequency. 10.7 mHz is a VERY common IF frequency in many receivers. This is not unique to this radio. Someone please explain to us how the simple existance of an IF output on a frequency of 10.7 mHz answers the question ....

Thanks,

John

4101. [PCR1000] Icom IC-1500 prices

Yahoo group: PCR1000
Date: 2005-11-17 04:28:17 UTC
From: Jason
Topic: 4101 Message: 4101

According to the Japan Icom site, the PCR1500 will be $528 US.
WIth the control head, $570 US.

THe software screen shots look great. Much better than the
SW that came with the PCR1000.

By looking at the tech. specs. it does not seems as the IC-PCR1500 have the necessary IF bandwith to accomodate videosignals.
Neither does it have any video demodulator.
The lack of a video demodulator could be worked around by the use of a IF output and an external video demodulator, but the IC-PCR1500 does not have an IF output, and does not have the necessary IF bandwith to accomodate videosignals.

Video links in the 2.4 GHz band, but that takes really good S/N to get a decent picture. Good band though, lots of surveillance cams and tracking there. Had fun years ago watching the 2.4 GHz feed from a nose mounted camera in a F-86 target drone. Had a pilot in it at the time, and we watched as he broke over the field and landed. Was testing a UAV camera downlink when I happened to tune in the F-86 video.

4105. RE: Vedr. [PCR1000] Icom IC-1500

Yahoo group: PCR1000
Date: 2005-11-17 17:34:31 UTC
From: Jens Andenaes
Topic: 4079 Message: 4105

If the 1500 is similar to the pcr1000, and the IF frequencies indicates that, then the max bandwidth (double sided) of the 10.7MHz IF filter is 50 kHz. That then gives a video bandwidth of half that, i.e. 25 kHz. So the question is not how much video you get through 10 MHz, but through 25 kHz. Its the bandwidth, not the centre frequency of the IF that matters.

4106. Re: Icom IC-1500

Yahoo group: PCR1000
Date: 2005-11-17 17:39:52 UTC
From: jcoupejr@aol.com
Topic: 4079 Message: 4106

Just for everyone's benefit, due to the buzz here about the PCR-1500, I sent an email to one of my contacts at Icom America to get an update. (We're an Icom Land Mobile and Receiver dealer and authorized warranty repair station.)

Icom America (remember it is a different company than Icom Japan) is aware of the PCR-1500, but has no estimated time of release or information on features or accessories. I did pass along the high level of interest shown on the talkgroup. Usually they listen carefully to dealers and end users and are keenly aware of the US market, since Icom America is the company's largest selling division. However, it looks as if we will have a bit of a wait until we officially see one here in the US.

Many members may not know that some of the US military unmanned aircraft now flying use PCR-1000's as monitor receivers (why reinvent the wheel; size, weight and features are about perfect). In fact, the US government is one of the largest buyers of Icom receivers, even the FCC uses them. On a personal note, I think we'll see something here in the US in the relatively near future. The PCR-1000 was a great receiver for the price, with many uses beyond simple SW or scanning monitoring and filled a niche in the market.

If I hear more, I will certainly post it. Icom receivers are excellent products and it is always great to see what new features the engineers dial into a new offering.

it HAS one, it's just not "given" to you on a connector like the VR-5000 or other high end icom recievers.

Patrick Oakes <coriander@...> wrote: Neither the PCR1000 nor the PCR1500 have 10.7 MHz output.
Even if it did, you would still need to supply your own demodulator,
so this is not really an answer. The original question still stands.

My balun drops down to a 75ohm coax connection. The BNC connection on the PCR1000 is 50ohm. Is this a problem?

Does it matter whether I use 75ohm or 50ohm coax?

Thanks for your thoughts.

No problem.
A lot of folks just hook their long-wire up to their
PCR; that 's somewhere in the 500-2,000 ohm range.
And they think that's great. Until lightning strikes.
50 ohm, 75 ohm for receiving you'll never know.
For transmitting, it's only a minor issue.
Also remember, a good ground is just like driving on
a newly paved highway.
Good luck and 73,
Skip

Date: 2005-11-17 22:38:10 UTC
From: Dave Freeman
Topic: 4114 Message: 4114
Attachments: 2 described; binary payloads are missing from this source WARC

I was just wondering if anyone knew if there's a way to connect FM Antenna to the PCR-1000 ? I have a few indoor/outdoor FM antennas but can't seem to connect them to my PCR-1000. Is there a FM Antenna made for the PCR-1000 ? If so, where can I buy one ?

Thanks,

Dave -

> it HAS one, it's just not "given" to you on a connector like the
> VR-5000 or other high end icom recievers.

I said, very clearly, in my last message, the following:

"Neither the PCR1000 nor the PCR1500 have 10.7 MHz output. Even if it
did, you would still need to supply your own demodulator, so this is
not really an answer. The original question still stands."

I fail you see how you can say it HAS one such output but it is not given
to me. If it is not given to me then it is simply not there, full stop.
That the receiver uses 10.7 MHz IF internally (which is what you are
probably trying to say), is no big deal; many receivers do, and it still
leaves the original question open.

Adding the internal downcoverter to 3 GHz (moreover with poor performance
as you can easily see from the Japanese website) is simply Icom's
marketing trick of no real practical use.

the 10.7 IF is 10 MHz wide so it would be able to
handle video

instructures are on the web for where to tap it

4117. Re: Vedr. [PCR1000] Icom IC-1500

Yahoo group: PCR1000
Date: 2005-11-18 05:36:52 UTC
From: John Taylor
Topic: 4079 Message: 4117

Jens, it is not my intentions to be argumentative here, but are you certain on the 10 mHz bandwidth of the IF?
The widest designed freqency coverage for this receiver was only 230 kHz ....

The 10.7 mHz IF is the second stage of a three stage superhet in this receiver ... Assuming the second stage is 10 mHz wide, then this receiver is going to be suceptible to any interfering frequency from 5.700 mHz up through 15.7 mHz .... all of which would fall into the IF or image frequencies .... this would certainly be strange ...

The first IF operates at 266.7 mHz - no bandwidth specified
The second IF operates at 10.7 mHz - no bandwidth specified
The third IF operates at 450kHz rather than the normal 455, except when in wideband FM mode ...these specs came directly from the Icom website specifications.

Default passbands are specified as 230 kHz for WBFM, 15 kHz for FM, 6 kHz for AM and 2.8 kHz for SSB/CW ..... where does the 10 mHz come from?

Where did that specification come from? The Icom service manual does not say that ...

Where do we find the instructions for tapping out the 10 mHz wide IF? I can find the DRM mods and the mods to open up the frequency coverage, but no IF tap mods .... A hint maybe???

Thanks
John

230 kHz is more like it.

Of course you can tap before the IF filter, but you'd be only using a
very small part of the radio, having to add your own filter, the entire
wide-band IF amplifier and demodulator, replacing practically most of
the radio. I really can't see many people doing that.

Re: [PCR1000] Antenna to PCR1000 Connection.

No problem.
A lot of folks just hook their long-wire up to their
PCR; that 's somewhere in the 500-2,000 ohm range.
And they think that's great. Until lightning strikes.
50 ohm, 75 ohm for receiving you'll never know.
For transmitting, it's only a minor issue.
Also remember, a good ground is just like driving on
a newly paved highway.
Good luck and 73,

From: Arcticpeak
Topic: 4079 Message: 4122

The IF bandwiths of the IC-PCR1000 is a quite complicated manner.

In the 266,7 MHz IF, there is a 3 MHz bandpass filter.
Before this filter the bandwith is limited by the input filters, who change according to the received frequency, making the actual bandwith smaller for certain receiving ranges.
After this filter the bandwith is 3 MHz (except if limited by the input filters), this in turn makes the IF bandwith before the IF filters in the 10,7 MHz IF section to be 3 MHz.
After the 10,7 MHz IF filters the bandwith is either 50 kHz or 230 kHz, depending on the selected bandwith.
In the 450 kHz IF section the bandwith is either 50 kHz before the 450 kHz IF filters, after the filters, the bandwith is either 50 kHz, 15 kHz, 6 kHz or 2,8 kHz depending on the selected filter.

All this information is extracted from the service manual of the IC-PCR1000.

73 de LA8OKA Martin

John Taylor <ke5ham@...> skrev:
Jens, it is not my intentions to be argumentative here, but are you certain on the 10 mHz bandwidth of the IF?
The widest designed freqency coverage for this receiver was only 230 kHz ....

The 10.7 mHz IF is the second stage of a three stage superhet in this receiver ... Assuming the second stage is 10 mHz wide, then this receiver is going to be suceptible to any interfering frequency from 5.700 mHz up through 15.7 mHz .... all of which would fall into the IF or image frequencies .... this would certainly be strange ...

The first IF operates at 266.7 mHz - no bandwidth specified
The second IF operates at 10.7 mHz - no bandwidth specified
The third IF operates at 450kHz rather than the normal 455, except when in wideband FM mode ...these specs came directly from the Icom website specifications.

Default passbands are specified as 230 kHz for WBFM, 15 kHz for FM, 6 kHz for AM and 2.8 kHz for SSB/CW ..... where does the 10 mHz come from?

Where did that specification come from? The Icom service manual does not say that ...

Where do we find the instructions for tapping out the 10 mHz wide IF?
I can find the DRM mods and the mods to open up the frequency coverage, but no IF tap mods .... A hint maybe???

Thanks
John

Thanks Martin, but I guess my manual must be missing some pages, or I have become blind in my old age. I cannot find the reference to that bandwidth. However, it is very clear that immediatly following 2nd mixer IC-5, the signal goes to buffer amp Q85 and then goes directly into either bandpass filter F-12 (50 kHz) or bandpass filter F-13 (230 kHz), and then goes to IF amp Q39. With this in mind, the only possible place in the second IF stage that there could be a bandwidth of 10 mHz would have to be directly before or after buffer amp Q85, and even if this were so, the useable signal at this point could still be no wider than what is allowed to pass through the bandpass filter immediately ahead of the final first stage IF amp Q13. If this is the 3 mHz filter you are referencing, my manual does not show me the bandwidth of it. Again, there could indeed be pages missing in mine.

I agree that the filtering circuits are quite comlex in this receiver ... especially in the RF amp stage ahead of RF amp Q12. There is a very complex set of low pass and high pass filters that can be both selected and tuned (via the varactor diodes) depending on frequency band selected. I especially have trouble finding any place in this receiver that the bandwidth is anywhere near 10 mHz, except of course at the antenna connector where the bandwidth is limited only by the ability of the antenna circuit itself.

Good data .... thanks for the clarification ...

F11 (or maybe it FI1?) placed between IC4 and Q13 limits the bandwith to 3 MHz.
You can find this information in the Block Diagram.

ive gotten lots of "is this still available" emails, but nothing
commiting to buy it.

ive decided to lower the price to 250.00 SHIPPED (US only, i will
ship to canada, but will have to add a few bucks for shipping)

thanks guys
email me at chilpeppa@...

Thanks Martin ...

I am still searching but cannot find the 3 mHz bandwidth reference anywhere in mine, but I trust that you have access to info I don't. I have read section 4-1-5 (1st MIXER CIRCUIT RF UNIT) till I am blue in the face and it does reference the output from pin 5 of IC4 passing thru the bandpass filter FL1 to supress unwanted harmonic components, then going to the next IF stage, which shows to be Q13. The block diagram I have begins with the signal coming from IC4 and going into the bandpass filter, but I just cannot find the reference to the 3 mHz.

In any case,thanks for the info, and it still proves that this thing is not really bandwidth conducive for standard raw video signals. The 10 mHz wide statement would need to be proven to me before I could accept it.

I guess the question still stands as to the real life usefulness of the PCR1500 receiver above say, 1 gHz. Yes, I am sure there are special single purpose applications where this unit will be ideal as a "black box" answer, but I cannot see where the unit will be much different than the PCR1000 for the general purpose user. Sure, the military, the FCC, and even police and aeronautical services will have unique applications that this box may serve well, but these are the exception rather than the rule.

Again, thanks for the info Martin,

John

Thanks John,

As I stated in my post yesterday, I could find the mod for DRM and the mod to expand the frequency coverage to unblock those that are blocked, but I could not find the IF tap modification. As with most radios, a person can always go into the circuitry and tap into any point they want, but this does not increase the bandwidth of that point. DRM was designed to operate within the normal 9 - 10 kHz bandwidth being used by most AM broadcast stations, with potential accomodations up to 20 kHz wide. Nowhere could iI find that it even remotely suggests that a bandwidth even approaching 10 mHz wide is ever even contemplated. This radio can easily handle DRM with those 20 "KHZ" design parameters.

The comment that the 10.7 mHz IF in the PCR1000 was 10 mHz wide was quite striking, especially since it follows, as Martin said, a 3 mHz bandwidth filter ....

I guess somewhere the context of this particular discussin thread has become a bit clouded ....If I contributed to that confusion, then I apologize, it was never intended to be that way. I just simply had issues with the statement that the 2nd IF stage was 10 mHz wide ...

As for tapping the IF, you might consider the point at the junction of R470/R471 a good candidate point. Or you might also consider the junction of R471/R528, which is the input side of the capacitor feeding the bandpass filter FL1 that was discussed. Both of these points are in the circuitry between the IC4 chip and the bandpass filter, which then feeds Q13. Careful though, Q13 is a 3SK131 dual gate VHF MOSFET. Also note, this is NOT the 10.7 mHz IF point, this is still part of the first stage IF. The 10.7 Mhz points would be likely tapped at the junction of R544/R496, which is the base of the Q85 1st stage IF amp transistor. You could tap at the junction of C541/D46/D49 if you needed the amplification provided by that stage. Take your scope and check those points to find the sigal you prefer.

Hope this helps,

John

I remember opening one up and reading the IF freq and
BW off a spectrum analyzer but maybe I was thinking of
a different receiver, it was a while ago

here is a note that states where to tap the wideband
IF

http://oscaronline.org/PCR/PCR1000_IF_tap.pdf

Hi John.
You can download the service manual here:
http://www.mods.dk/view.php?ListManuals=icom
Martin

John Taylor <ke5ham@...> skrev:
Thanks Martin ...

I am still searching but cannot find the 3 mHz bandwidth reference anywhere in mine, but I trust that you have access to info I don't. I have read section 4-1-5 (1st MIXER CIRCUIT RF UNIT) till I am blue in the face and it does reference the output from pin 5 of IC4 passing thru the bandpass filter FL1 to supress unwanted harmonic components, then going to the next IF stage, which shows to be Q13. The block diagram I have begins with the signal coming from IC4 and going into the bandpass filter, but I just cannot find the reference to the 3 mHz.

In any case,thanks for the info, and it still proves that this thing is not really bandwidth conducive for standard raw video signals. The 10 mHz wide statement would need to be proven to me before I could accept it.

I guess the question still stands as to the real life usefulness of the PCR1500 receiver above say, 1 gHz. Yes, I am sure there are special single purpose applications where this unit will be ideal as a "black box" answer, but I cannot see where the unit will be much different than the PCR1000 for the general purpose user. Sure, the military, the FCC, and even police and aeronautical services will have unique applications that this box may serve well, but these are the exception rather than the rule.

Again, thanks for the info Martin,

John

Thanks Martin,

This is the same manual I already have as this is where it came from. I have been a long time user of mods.dk for a variety of things. This is also the site that has the expanded frequency coverage mod, and the ex0299 software for servicing the PCR1000.

You can also find the links to this manual and many more at http://members.fortunecity.com/xe1bef/manuals.htm , however I think that this site is just linking right back to mods.dk's files and downloads.

There is another site in Italy that says it has the service manual download:

http://www.marcucci.it/english/download/#pcr1000 ... but at only 2 mb, I seriously doubt it has the pertinent data.

While we are talking about download sites, there is a link off that site to: http://www.icom.co.jp/world/download/index.htm which will get you the updated PCR1000 software and control programs.

I still cannot find the reference to the 3 mHz bandwidth you spoke about, but at this point, I suppose it is not really that important.

Thanks anyway,
Cheers,

John

4136. PCR1500

Yahoo group: PCR1000
Date: 2005-11-19 16:24:53 UTC
From: John Taylor
Topic: 4136 Message: 4136

For those that are interested in the new PCR1500, RigPix has already posted pictures and specification on this new beast. The thing can be seen at: http://www.rigpix.com/icom/icr1500.htm

I noticed that there are a couple of features on this thing that I don't recall anyone talking about, such as CTCSS/DTCS operation. DSP option (UT-106), which is the same for the PCR1000. Windows software for computer control is now via USB connector rather than RS232, which has been mentioned on this group. Also, they are verifying that the box will be sold in two different versions (other than the crippled version for the USA). They are providing it in the classic version like the PCR100 and PCR1000 requiring computer control, and they also have it with the optional remote control head w/cable (I think this option adds about 50 bucks US).

Cheers

Anyone know what the price will be for the new PCR-1500 ?
Also what is basically the difference between the PCR-1000 and the 1500 ?
Thanks

According to the Japan Icom site, the PCR1500 will be $528 US.
With the control head, $570 US.

As Jason says, those are the prices that have been mentioned on some of the Japanese blogs that are known to generally be accurate. Of course the prices stated there are quoted in YEN and you have to make the conversion in current currency.

As for the differences, the main difference of note is the frequency coverage. This new rig has coverage extending to 3.3 gHz, however it should be noted that it does NOT include all modes on all frequencies. There are some other bells and whistles added, such as USB control, CTCSS/DTCS tone squelch, and some other minor stuff. Search through this group and there is a number of comments relating to this new critter.

Cheers,

John

I am one of those people that trys every single savings program I come across. I'll be honest when I say that almost all of them are a waste of money and time. About ten years ago, I came across a program at http://www.wrldofproducts.com and decided to try their coupon program. The real worth of this program is realized as the years go along. The first few times I used their program I saved a ton of money but I always thought that that would be it, that the next time I go shopping the savings will be small, but for 10 years the savings have been consistent. Through the years, I always tried the products that they came out with (back then they didn't offer a sampler package) It must be true when they state they put every product through rigorous testing because everything I ever tried has worked even better than they stated. Everyone that has witnessed what I have saved have all joined up.

The 3 MHz BW reference is indicated in the text below the filter marked Fi1 (or is it F11? The text is slighly fuzzy.)

Martin

John Taylor <ke5ham@...> skrev:
Thanks Martin ...

I am still searching but cannot find the 3 mHz bandwidth reference anywhere in mine, but I trust that you have access to info I don't. I have read section 4-1-5 (1st MIXER CIRCUIT RF UNIT) till I am blue in the face and it does reference the output from pin 5 of IC4 passing thru the bandpass filter FL1 to supress unwanted harmonic components, then going to the next IF stage, which shows to be Q13. The block diagram I have begins with the signal coming from IC4 and going into the bandpass filter, but I just cannot find the reference to the 3 mHz.

In any case,thanks for the info, and it still proves that this thing is not really bandwidth conducive for standard raw video signals. The 10 mHz wide statement would need to be proven to me before I could accept it.

I guess the question still stands as to the real life usefulness of the PCR1500 receiver above say, 1 gHz. Yes, I am sure there are special single purpose applications where this unit will be ideal as a "black box" answer, but I cannot see where the unit will be much different than the PCR1000 for the general purpose user. Sure, the military, the FCC, and even police and aeronautical services will have unique applications that this box may serve well, but these are the exception rather than the rule.

Again, thanks for the info Martin,

John

Sorry Martin, but the picture does not appear to have come through
on my end. I take your word for the bandwidth, it just does not
appear in my service manual... not the first time I have had
documentation that is missing info ....
Maybe you could upload the image to the files section ...

Thanks again,

John

how much you wanna bet the 1500 uses the 1000 protocol OR uses the protocol used by so many other of icoms radio's, I would totally not be surprised if the 1500 CH worked on other radios, if not the 1000 itself,

seen at: http://www.rigpix.com/icom/icr1500.htm

I noticed that there are a couple of features on this thing that I
don't recall anyone talking about, such as CTCSS/DTCS operation. DSP
option (UT-106), which is the same for the PCR1000. Windows software
for computer control is now via USB connector rather than RS232, which
has been mentioned on this group. Also, they are verifying that the
box will be sold in two different versions (other than the crippled
version for the USA). They are providing it in the classic version
like the PCR100 and PCR1000 requiring computer control, and they also
have it with the optional remote control head w/cable (I think this
option adds about 50 bucks US).

Cheers

Just looked at ripix and I definitely have to say yea on the USB control.
Now since it has a detachable control head I just wonder if it is possible
to use the control head input jack for other control options.
For 600 bucks USD heck you cant beat it. I bet the price will be high at
first untill the demand fall a bit. I will probably wait a year first.

4146. The picture showing the bandwith of Fl1

Yahoo group: PCR1000
Date: 2005-11-20 10:40:01 UTC
From: Arcticpeak
Topic: 4146 Message: 4146
Attachments: 1 described; binary payloads are missing from this source WARC

I'm trying to send the picture again who shows the bandwith of filter Fl1.
I hope it works this time.
The bandwith (BW) is indicated in the text below Fl1.

Hi All
The main problem will be all our great PC programs that will not be compatible to USB. No more TalkPCR or TrunkPCR etc; I believe it will take time till we see the same versatility in programs we have for the PCR1000

4149. RE: [PCR1000] PCR1500

Yahoo group: PCR1000
Date: 2005-11-20 14:49:53 UTC
From: Jerry Flanders
Topic: 4136 Message: 4149

Those programs probably won't run the 1500 anyway. BUT - software is
available to "connect" the USB port to a program that expects a
serial port input. Right now in my truck my navigation laptop has a
USB GPS that works fine with an old mapping program that expects the
GPS to be on a serial port. These are DeLorme products and the
convertor program was supplied by them. I assume it is a driver that
could be used with anything, but don't know that for sure.

4150. Re: The picture showing the bandwith of Fl1

Yahoo group: PCR1000
Date: 2005-11-20 15:48:20 UTC
From: John Taylor
Topic: 4146 Message: 4150

Thanks Martin, the picture came through and clearley shows the bandwidth of FL1 as 3 mhz. My service manual does not have this picture, so that explaoms the controversy.

Now, to add to the confusion, johnanddavina2003 posted a link to a Japanese translation that has more information on it that could fuel even more of this discussion. Midways down in the "MAIN RATING: chart, there is a field labeled "Frequency resolution" and it lists a series of ranges begining at 1hz, 10hz, 20hz, etc, and ending with the fabled 10mHz and user setting. I am wondering if this is implying that the bandwidth corresponds to the "resolution". Since they are using the same IF frequencies for each stage, one can extrapolate that they likely may be using the same filter scheme in the same range as the PCR1000. This could get confusing since it is impossible to have a 10 mHz bandwidth pass through a 3 mHz bandwidth filter like FL1.

Your thoughts?

Thanks,

John

Thanks again,

John

By looking at this page:
(The translated version of the japanese site)
http://translate.google.com/translate?u=http%3A%2F%2Fwww.icom.co.jp%2Fproducts%2Freceiver%2Fic-r1500%2Findex.html&langpair=ja%7Cen&hl=en&ie=UTF-8&oe=UTF-8&prev=%2Flanguage_tools

It seems obvious to me that it is a badly translatioin, it seems obvious to me that what the actually mean is the selection of frequency steps available.

Hi All
It is not an matter of using a USB to UART conversion. So when you use talkPCR with a USB to serial converter it work ok but We are talking about a completely different interface that will need major reprogramming. And we are not sure that the command sets are the same either.

Could it be that the controller interface is basically the old rs232 interface? That would probably simplify ICOM's remote frontpanel construction.

and thats EXACTLY what I'm thinking, a microproc / PIC that can just send commands through the connector, that would be the simplest/most cost effective way to add a display to the PCR, and in fact, it HAS been done,with about 40$ worth of parts IIRC, so an extra 60$ for a manufactured version doesnt sound that far off....

SO.. theoretically, if that IS the case, you can just buy the head, make your own cable, and you have a remote mount PCR-1000, HOWEVER, I'll bet they added commands for the newer band segments...

From: John Taylor
Topic: 4156 Message: 4157

Yes Jerry, both are available on http://www.mods.dk ....
click on the ICOM button, then on the right side click on manuals
button ... both are down in the list. Good luck on being able to
download though. This site has a strict download limit of two manuals
per day per IP address. If you use a dynamic IP server as most of us
do, and someone else has used that IP during the last 24 hours, you
can't get it ...

Cheers, and Happy Holidays,

John

Topic: 4159 Message: 4160

Hi

There is a program called MacLoggerDX which will control receivers or Transceivers, and do much more besides.

A piece of software that was made to run on a Mac and control an Icom PCR1000 MacR-1000

This can be downloaded from http://manoverboard.org <http://manoverboard.org/>

MacLoggerDX can be downloaded from www.dogparksoftware.com <http://www.dogparksoftware.com/>

I hope this helps

Regards

Stuart (UK)

There's an app called MacR-1000 that works fine.

http://www.macupdate.com/info.php/id/16407

You'll also need a USB to 9-pin serial converter since Macs don't
have a 9-pin serial port.

I got mine on eBay for just a few pounds.

Peter

4162. noise from monitor

Yahoo group: PCR1000
Date: 2005-11-24 18:52:41 UTC
From: John Taylor
Topic: 4162 Message: 4162

I am having significant problems with rf noise coming from the CRT monitor on the computer that controls my PCR1000. This noise appears as buzzing sounds in quite a number frequencies. Obviously there are several sources of this noise within the monitor because they sound different and show up on different frequencies and harmonics. Has anyone found a suitable, reasonable method of reducing or eliminating this noise short of attempting to run the receiver in another state, or country? I have confirmed the noise from the monitor by shutting the monitor off when I hear the interference and it does eliminate it. When I turn the monitor back on, the noise returns. It is quite difficult to operate this receiver without the monitor. This is so frustrating!

Thanks,

John

From: fhub55
Topic: 4162 Message: 4163

Hi John,

I had exactly the same problem some years ago, and all my attempts to remove this noise by the CRT monitor failed!

So I only see one solution:
Either buy a LCD monitor or use a notebook to control the PCR-1000!
These LCDs don´t produce any RF noise and I had no longer problems since I´ve switched to a LCD display.

Regards,
Franz.

4166. New version of Shortwave Log posted

Yahoo group: PCR1000
Date: 2005-11-25 16:53:06 UTC
From: Robert Sillett
Topic: 4166 Message: 4166

A new verison of Shortwave Log, a free logging and radio control program, has been posted to the http://www.shortwavelog.com web site.

Shortwave Log can control the PCR-1000 and also allows a PCR-1000 to be published on the Internet with a web interface.

You can read more about the program and download it from http://www.shortwavelog.com.

From: Lynn Hansen
Topic: 4167 Message: 4167

Hello all,

I'd like to update you on several new features that have been added to CTR-Rcvr, Pocket PC remote radio control software for the PCR100 and PCR1000 radios.

The current version is (1.03.00) has been posted on my web site (www.lynovation.com) and on the CTR-Remote Yahoo group (groups.yahoo.com/group/CTR-Remote)

It includes the following:
Ham callsign look up via QRZ.com
Enhanced log options including several contest fields and user defined fields.I'll also be porting CTR-Rcvr to the PC in the near future. This new program will provide all of the features of CTR-Rcvr on your PC or notebook. Registraton will be included with the CTR-Rcvr license.Lynn

4179. MacR1000

Yahoo group: PCR1000
Date: 2005-11-30 20:03:23 UTC
From: jimjoansmith
Topic: 4179 Message: 4179

I hasve just downloaded this program to my Mac Computer and I think the PCR1000 works better than when I used it in Windows.

However, I am having a problem with deleting frequencies and folders.

I have added several frequencies to the library and some have been duplicated (how, I am not sure). I also created a folder for a specific group of Fire Freq. Using drag and drop from the Freq list I am able to put freqs in this folder. I mistakenly placed a few in this folder that I want to remove, but I can't find a way to do it. I cannot even figure out how to delete the folder.

Has anyone faced an conqured this problem?

Jim

4182. PCR Black Box Info

Yahoo group: PCR1000
Date: 2005-12-02 17:53:05 UTC
From: jimjoansmith
Topic: 4182 Message: 4182

I have owned my 1000 for a couple of years and only recently discovered that I get reception
wheether the toggle switch is up or down.

Sine the ICOM manual left a lot to be desired, and I am not too proficient in these things, I
am guessing at the answer.

The green light never goes off, whether it is in the up or down position. Does this mean there is power all the time and that the switch is probably defective?
Also, the box used to get quite warm, but I have not noticed that lately, even with the switch
in the up position.

Any thoughts?

Mine gets quite warm.

I placed mine on a wire shelf where it gets plenty of air flow around the unit and it seemed to really help with the heat build up.

PCR-1000 Question.

I am using PCR-1000 to receive ATCS (Railroad signals). I currently connect it to my laptopo via the serial cable and an iMic to the microphone input (to the sound card on the laptop). My question is; do I still need the serial connection, or does the connection via the iMic take its place??? Thanks in advance.

Yes, you do... the serial cable is used to control
the PCR-1000; the data comes out in audio form,
into the soundcard for decoding.

Gregory, yes the serial cable is still required to control the
radio, you know how wild and out of control they can get!!!
Seriously though, you might consider running your audio cable to
the "line" port of your soundcard inputs rather than the mic port.
You will have a much better match of audio levels which can actually
enhance your listening pleasure quite a bit, not to mention you can
get more clear data passed between the radio and the computer.
Also note,in the future it might help if you include a subject in
your posts. It makes it easier to reply ...

Hope this helps,

John Taylor

Thanks to all that replied. For some reason I couldn't get the subject line to appear when I first posted this message. Must have been a glitch with my computer at work.

Here is my situation. In using the PCR1000 for monitoring ATCS (railroad signals), I need to hook up two receivers to the laptop. One is dedicated to the freq. of one type of signal, and the other to the other type of RR signal. I can't scan because I would not be able to pick up the short data bursts needed to interpret the signals. I've seen this done before, but I don't have a clue how both PCR's were hooked into a single laptop. Is there come type of adapter for the serial port? Any guesses???

Yes again Gregory ... as Matthieu said in his post, there are USB to serial converters out there, as well as PCMCIA and a variety of other serial interface mechanisms. Any of the more popular of these should do just fine for what you are wanting to do.. There have been several posts within this group on using some of these devices ...

4192. Serial to USB converters work fine.

Yahoo group: PCR1000
Date: 2005-12-15 16:06:53 UTC
From: Richard Stern
Topic: 4192 Message: 4192

Serial to UsB converters work fine. I've used them on
alot of my radio equipment.

The only problem you may run into is assigning a COM
PORT # that is not being used in the Device Manager.

Mine have been working great for a couple of years.

GOOD LUCK

Richard Stern / NW3N

From: terjeelde
Topic: 4197 Message: 4197

Hi,

I've dusted off my old Icom PCR1000 (not literally), and have tested it with TalkPCR on Win XP. It works great for less than a minute, then the radio seems to just freeze. Audio cutts off, and software seems to not be able to talk with it anymore.

Turning it off and on again, as well as restarting the software, makes it work for a short amount of time again, but soon it freezes up again.

I'm curious if this is a known problem with the pcr1k, and if there's anything that can be done to resolve this problem?

Hope anyone can help,
Terje

You were absolutely right. I didn't at all expect this, since the bad cable was brand new. Replacing it with another new cable from a different brand makes it work just like perfect. Cheap no-name replaced with Bandridge (if anyone wants a name that they're sure works, for the archives I mean).

This makes my day quite a bit brighter, since I was almost sure I had a very expensive brick. :)

Thanks for all the help. I purchased the Serial to USB converters
as suggested. Just waiting for the radio. Here is a question I
sent to ICOM, that perhaps someone on here can help with. How do
you run two PCR-1000's at the same time on a laptop. When I run the
PCR program, it will only run one application. If I try to start up
another application (by clicking the desktop icon) it does nothing.
Anyone know??? Thanks again.

The Radio itself doesn't care, but I see that the application might.
Easiest/most obvious thing to try would be to use two different software
packages, which will likely not use the same locking, and allow you to
run one of each. Another thing to try is to run the program under
different users.

4210. RE: [PCR1000] Re: Wanted !! PCR 1000

Yahoo group: PCR1000
Date: 2005-12-20 23:44:45 UTC
From: Stuart
Topic: 4204 Message: 4210

Hi David

I have an Icom pcr1000 with filters fitted I would like £200 for it. The rig has no problems everything works perfectly. I have all the bits and instruction manual.

And I□d ship it however you wish.

Regards

Stuart

4211. Pcr Stuff

Yahoo group: PCR1000
Date: 2005-12-21 02:47:11 UTC
From: ws4454
Topic: 4211 Message: 4211

I have accumulated about 4 to 5 cds of stuff over the years for my pcr 1000. Now I have finally sorted and made 1 cd out of them. I hate to just throw those cd's away this is all stuff from the inet that was free. So the first person to send me their mailing address in the DFW Texas area with a PCR1000 I will mail these cd's to free instead of throwing them in the trash.

Sorry DFW Area only I will not respond to others.

Merry Christmas!

I will reply to the first person and confirm I will send them to them but ONLY in DFW Texas Area.

My email is ws4454@...

Thanks.

Thanks Terje, The other thing I was considering is that I have an extra laptop with Win98SE on it. I could run one PCR-1000 on it, and just connect the input via an iMic to the one running the other PCR. Do you think that would work? If I am correct, the only thing the serial connection does is control the receiver. I think the output (I'm monitoring ATCS RR signals) is done via the packet wire??? The ATCS program allows multiple sessions and all I would have to do is direct it to the proper USB input.

>

From what I understand (hope others will correct me if I'm wrong) the serial is mostly about controlling the radio, but also about feedback from the radio, such as signal strength etc. That shouldn't be needed by the application though. I don't have any experience with ATCS myself, but I would guess the program deal only with the input, not actual radio control. If that's the case, the solution you describe should work fine.

I browsed through the atcsmon.com website, and from the information there, using the packet wire should be the right choice.

I should however note that often when it comes to monitoring packet-things using soundcards, soundcard-quality is an issue. Both the general quality, it's accuracy in timing, and it's ability to set odd sample rates. How big of a difference this is for ATCS should be easy to check by testing an iMic (assuming you already have it) against the built-in (or other) soundcard. Line-levels could also be an issue for some soundcards, but the iMic seems to support both mic- and linelevels, so that shouldn't be an issue.

And finally, as a side-note, as I learned a few posts back, serial cable quality is an issue. My pcr1k just died after short useage with a bad cable, but works perfectly with a good one. I also tested disconnecting the good working cable, and soon after I disconnect it, the radio stops short like it would with the bad cable. If there is a way around this (software/hardware) then you could set one receiver to a spesific frequency, change the cable over to the other, set it, and just use one radio without any active controls.

I've forgotten most things I've learned about low-level serial communications, but my guess is that there's a pin signaling if the PC has the port open, and that the pcr1k stops if this pin isn't set. Either that, or possibly a voltage issue. With most such explanations,

it could be a fun and easy small-electronics project to simply make an adapter that would still give the voltage or raised-pin info to the pcr1k, to keep it from stopping. That would work around the issue, and allow you to use it without a connected computer.

Anyone know if there's a keepalive between the software and the pcr1k? That could also be an issue.

Terje

4220. Re: Serial to USB converters work fine.

Topic: 4192 Message: 4220

In reply, Terje, I have heard that an adapter with a jumper between RTS and CTS as well as a jumper between DTR and DSR will accomplish what you are speaking of. I have not tried it but it should be simple enough. This adapter would have to be in place during regular use so that once the PC is disconnected, the leads are still tied together. The PCR may dump if it detects a short drop in those leads. This means the adapter would be some sort of breakout box that allows thru connections.

Hope this helps,

John Taylor

4227. Instructions for TrunkPCR

Yahoo group: PCR1000
Date: 2005-12-22 19:54:12 UTC
From: Dave
Topic: 4227 Message: 4227

I just downloaded TrunkPCR to give it a try. Are there any instructions for this program. When I click the "Power" button, a message pops up that reads: "Radio Not Responding, Please Check Com Port Setting, Power and Cables, then Try Again..."

My PCR1000 works fine with my Icom software.

Also, does anyone know if the PCR1000 will ever be able to recieve APCO-25 digital signals, possible via an adaptor of some sort like AOR and others have done?

Dave

4228. Re: [PCR1000] Instructions for TrunkPCR

Yahoo group: PCR1000
Date: 2005-12-22 22:43:06 UTC
From: Jay
Topic: 4227 Message: 4228

Hi Dave,

Trunk PCR looks at the com port to see if the CTS line is active.
The PCR raises this line when it is turned on...
If you have a bad RS-232 cable, that could be the problem.. Try another...

The instructions for the program can be accesed by clicking the
Help->@Homepage Menu...

Regards,
Jay

4257. Re: list problems!!!

Yahoo group: PCR1000
Date: 2005-12-31 18:35:44 UTC
From: aceblaggard
Topic: 4248 Message: 4257

Two points about this, first, it's a waste of time reporting each spammer as they'll just use another bot to sign up and send more next week, the members list is probably full of them lying dormant and without any moderation of new posters there aint much we can do about it.

Second, don't believe Yahoo and the bullshit it comes out with, they couldn't really care less. I've been trying to get them to do something about some racist abuse in another list I'm on, first they sent a standard reply then after I hassled them for a real reply they said they couldn't mediate in group arguments even though the evidence of racial abuse is quite clear for all to see in the archive and remains so. Further follow ups to them go unanswered so draw your own conclusions on their 'concern'.

Finally, the one and only moderator/list owner appears to be Ken Johnson and his email address is bouncing so it's unlikely you'll get any help from him. There are at least two more PCR groups and both appear to be spam free, http://groups.yahoo.com/group/ICOM_PCR1000/ and http://groups.yahoo.com/group/PCR-1000 It could be time to drop this list in favour of the other two and leave the spammers to it.

Hi Matt,

I've one last possible solution for this. I've done some digging and have found the list owners telephone number in Guernsey! I was actually after a current email address but that doesn't seem to exist so I might have to resort to ringing him up and find out if there's any chance of transferring ownership or adding some of us as mods. I'll keep you posted.

Hi Frederico,

The 9600/packet socket is the discriminator output and can be used for data decoding. AIS, pagers and mobitex are all modes that require or benefit from using this output.

Jeff, not sure how you get this group (via reading on web or emails) but I get all messages via email. You might want to try Popfile. The best part is it's open source and free. It's the best anti-spam tool I've found.

http://popfile.sourceforge.net/

I've been using it a long time and after a little training 99% of all spam is detected and deleted automatically. All that crap that spammers are sending goes straight to my trash folder. Basically I don't even know there are spammers. I had to review the deleted messages to see what you were speaking of.

Just a tip.

MW

Topic: 4269 Message: 4269

Hi everyone, sorry if this post is slightly off topic, but I thought it might be interesting for members to know that I am listing a Palm 3c PDA on e-Bay (item number) 5849215543.
I have been using this PDA for about a year using software IP1KC to run the Icom IC-PCR1000 in colour and in full scan mode, without any problems, the software is still installed and ready to go, all that is needed is a FULL null modem cable adapter or lead between the two devices.
Rgds Bob.

From: aceblaggard
Topic: 4266 Message: 4274

Getting hold of the admin goes something like this...

The owner's email address "ken at odpt.freeserve.co.uk" is bouncing, googling it lists an old Demon email address and his amateur callsign 2U1EKH. The Guernsey call book has an entry for him and BT lists his phone number. I phoned it but the person who answered said he hasn't lived there for a long time and has no forwarding details. There is a Ken Johnson who has posted to an online forum for Guernsey within the last year but is only listed as guest status so again no details. There are only four K Johnsons listed in GY5 so I rang them all :) Believe it or not I spoke to his cousin who unfortunately doesn't know of his whereabouts these days but has taken my number just in case he bumps into him.

With no current email address or contact details, I think we are stuffed. Unless someone can put out an APB on him I think it's time to jump ship which will be a shame, this list is quite active and has the biggest number of subscribers (hence my detective work) although I've no idea how many of them are spam bots and dead addresses. Yahoo have been there usual unhelpful selves by first stating they wont add any mods or change list owner even though it's obvious the current one is AWOL. They have suggested we start a new group and 'invite' existing members to that, I waiting to hear back on the best method of sending out 2000 invites. They did do one thing, they've reset Kens email address from bouncing, really useful when the bounce is caused by the listed ISP not knowing the account name, useless gits.

So looks the best option is to move to another PCR list, both these appear spam free.

http://groups.yahoo.com/group/PCR-1000 has 933 members and is more active than
http://groups.yahoo.com/group/ICOM_PCR1000 that has 580 members

Paul

4276. Re: I guess based on all of the BULLSHIT spam that this group is now dead

Yahoo group: PCR1000
Date: 2006-01-03 19:55:32 UTC
From: John Taylor
Topic: 4266 Message: 4276

Paul, one of the things we have done in several other groups I belong to (and moderate) is to not only make all new memberships be approved by a moderator, but set up certain criteria to help eliminate new users coming in under false pretenses just to further their crud. The main rule is, any new application for membership must have a verifiable identification that is a minimum of 6 months old. This means if a person creates a new Yahoo or Hotmail, or any web based identity, and it is less than six months verifiable, then the applicant MUST provide some other means of identification or they simply do not get approved. PERIOD! This has completely eliminated spam in our groups, and has been very little effort on the moderators to keep up with. There have been a few cases where the individuals refused to provide any other identification other than the new web based one they just created. Oh Well ... we'll miss em' ....;)

Additionally, I located another email address for Ken and have sent him a message ... So far it has NOT BOUNCED!!

4277. TrunkPCR Update 0.7.183 Available

Yahoo group: PCR1000
Date: 2006-01-05 02:18:57 UTC
From: Jay
Topic: 4277 Message: 4277

Hi all,

You can now download TrunkPCR Version 0.7.183 from the website:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a couple bugs:

Dec 09,2005 - -----: Changed Text Editing in MOTO Custom FreqPlan.
Dec 09,2005 - Added: Preliminary Settings for the PCR-1500.
Dec 09,2005 - Added: Show Known Freqs in Display Panel when in Freq mode.
Dec 12,2005 - Added: Frequency Error reporting from PCR.
Dec 13,2005 - -----: Refresh CC Activity when updating Custom/Extended
Freqplan.
Dec 13,2005 - -----: Text Validation in Custom/Extended Freqplans.
Dec 16,2005 - Fixed: Show Freq Centering with propper Mode/Filters.
Dec 23,2005 - Fixed: Reloading stored info when New Bank Inserted.
Dec 23,2005 - Fixed: Reloading stored info when New Channel Inserted.
Dec 23,2005 - Fixed: Adjusting stored info when Bank Deleted.
Dec 23,2005 - Fixed: Adjusting stored info when Channel Deleted.
Dec 23,2005 - Fixed: Setting Volume on StartUp.
Dec 23,2005 - Added: AutoSet Frequency Ranges.
Dec 23,2005 - -----: Editing of Duplex Frequency.
Dec 26,2005 - -----: BandScope Adjustments.
Dec 26,2005 - Fixed: Adjusting stored info when Freq Text Changed.
Dec 28,2005 - Fixed: BandScope Limit Pic Display.
Dec 29,2005 - Added: Export Found Freqs in Spectrum Sweep.
Dec 29,2005 - Fixed: Sweep Freq Knob Disabled when Sweeping.
Dec 30,2005 - Fixed: Sweep Freq Low/High Text Disabled when Sweeping.
Jan 02,2006 - Fixed: BandScope Disabled when Sweeping.
Version 0.7.183 Released 01/04/2006

Regards,
Jay

From: solarwavecdn
Topic: 4292 Message: 4292

OK folks,

I have set up a new group:

http://groups.yahoo.com/group/icompcr1000

I have set it up so that you have to request to be a member. Once approved you have full access. We can discuss whether we want the group wide open (anybody can join) but posts must be approved, or anybody can post (but that's how we get spam) at a later time. I have personally found that approved members having total posting access works well. If somebody spams us, BAM, there kicked out.

Start sending your requests and a couple of guys have already voluntered to help moderate. If you are presently a member of the PCR1000 group, please say so I know who you are (but I will check).

Hey All,

TrunkPCR Version 0.7.184 is now available at the homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes 2 problems...
Jan 08,2006 - -----: Protection from Editing .Bnk file Frequencies.
Jan 23,2006 - Fixed: Repeat Scanning of more than 1 Bank in
Conventional Mode. Don't know when this happened...
Version 0.7.184 Released 01/23/2006

Regards,
Jay

4300. Weather fax and NAVTEX

Yahoo group: PCR1000
Date: 2006-01-23 12:07:14 UTC
From: David Allin
Topic: 4298 Message: 4300

I am having trouble with receiving NAVTEX and weather fax data. I have tried both SEATTY and JVCOMM32.

The NAVTEX tends to be fine for a few words or maybe even a line or so then go crazy. Weather fax no luck at all.

Any good tricks/experiences on how to get it working, for preference without need to spend hundreds of EUR on SW

Thanks Dave

Yahoo group: PCR1000
Date: 2006-01-28 14:53:38 UTC
From: Stuart Pinkney
Topic: 4302 Message: 4302

Hi to the group
I wonder if anybody can shed some light on this?? I have just bought an ICOM IC-PCR 1000 and also bought at the same time the UT-106 filter. When I removed the lid to fit the filter I found a small circuit board about 2" square on a ribbon cable conected into J12, this board is stuck onto the metal shielding. I've never seen it before in other models and at a loss as to what it's for. I'll send some pictures up to the photo section.

Regards
Stuart

I'll guess you purchased your PCR-1000 used WITH the DSP, already...
and you should have the DSP button working on your software.
Be prepared for all those that might want to purchase a NEW dsp board...

Hi Skip

This circuit is not a DSP it's conected into J12 the DSP conects into J3 and J4 the DSP button in the software only lit up once the filter had been fitted.
This is why I'm trying to find out what this circuit is..

Regards
Stuart

I found J12 on the schematic... I'm not sure where it goes to, or even the designations of the signals. I'm now trusting this is a NEW unit that no one has ever 'hacked'.
The 'service manual package' is 26 MB, so it's a bit much to email.

From: yeryry
Topic: 4302 Message: 4306

It's almost certainly the UT-107, for decoding weather data etc from carriers transmitted along with broadcast FM stations in Japan only..

See http://www.icom.co.jp/products/receiver/ic-pcr100/index.html

If you could take some close high-res pictures of it and upload them to http://imageshack.us or similar that would be good..

From: Stuart Pinkney
Topic: 4302 Message: 4307

The pictures are now up under PHOTO's have a look and see what you
think???
I've tried to make them as clear and focused as possible. You will
also see the DSP filter in the back ground.

Regards
Stuart

Has anyone had any luck getting the PCR1K to work with an Optolinx as a 2-Level Data Slicer. I have been trying to use the discriminator output on the PCR1K and can't seem to get it to work. Any suggestions on set-up would be greatly appreciated.

Thanks,
Jr Bob D

Jr Bob,
The Packet/data tap is more a pure Data/packet output, then a discriminator output there's filtering and and a cap in your way. You could try tapping the NFM decoder chip directly at pin 9 of IC10 a TA31136, make sure to get IC10, as the PCR has 2 TA31136 in it (IC8).

Ray,

Thanks for the reply. Is there a way to test the "Packet" connection on the PCR1K? I hook up a speaker on the port and all that is heard is static. Is this correct?

Also, are you saying the Packet is not the best for base audio?

Thanks again!
Jr Bob D.

Bob,
First,
It's most likely ok.
The discriminator/data tap is before the squelch and the audio filtering that you "hear" when listening to the audio output, and when receiving data from off the air you don't want or need all that filtering. So yes "noise" is normal. I guess you would hear something if tuned to an active frequency, I.E. the weather service. I've never tried it or needed to.

Second,
Base band audio = Discriminator, different name same thing.
YES, It's not a "pure" discriminator tap I.E. connected directly to the chip through a capacitor. The packet jack is really just for out putting packet/data as it's well designed to do that. There are programs out there that can use a sound card line level input to decode the Data received from the jack. I'll leave that up to you to find them.

Here's a quick spot test. Shut off your CRT. Buying a LCDisplay
cut a lot of noise. But that's just one of many sources.
Grounding is also important. A properly grounded radio is like driving
on a freshly paved highway, for a strangely similar effect. Every microvolt
your ground gets 'lifted' from 0.000000volts gets reflected back into the
radio. That is why your 'AC power' ground isn't a good place.
Another trick would be to replace your antenna with a 'dummy load'.
That will point out the noise via your PC, and powersupply.
Also, run your PCR from a 12 battery. I use a 12V car 'jumper battery'.
And, a DSP unit can help, not solve the problem, but make it easier to live with.
Good Luck and 73,
Skip

When I first got my PCR1000 it was unusable because of the supplied RS232 cable. I replaced it with a screened cable and it was usable.

When I went from a CRT to LCD display it got better too.

Finally if you have Ethernet, try different cables as, in my experience, Ethernet cables seem to have different RF characteristics.

The CRT -> LCD display helped me to.Ironically the other big help was when I used a USB/9pin RS 232 cable.My p/c,at that time,did not have any serial ports so I got the USB cable.I still use the USB/serial cable,even though my *new* p/c has serial ports,because of the noise factor.I have no idea if it's the cable itself,the use of USB or a combo of the two but it does indeed make a positive difference.

4331. TrunkPCR Update 0.7.185 Available

Yahoo group: PCR1000
Date: 2006-02-27 07:09:02 UTC
From: Jay
Topic: 4331 Message: 4331

Hi all,

You can now download TrunkPCR Version 0.7.185 from the website:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a couple bugs:

Jan 26,2006 - Fixed: Edacs Hunt CC On Data Loss.
Jan 27,2006 - -----: Limit Pic Off Now when Trunking.
Jan 29,2006 - Fixed: Current Bank updated if changed in Channel Organizing.
Jan 29,2006 - Added: COM Port Status Indicators (Ctrl-Q).
Feb 03,2006 - Added: Trunk Settings Window Position Now Saved.
Feb 03,2006 - Fixed: Group/Radio Counts Updated in CC Activity when Deleted.
Feb 04,2006 - Added: More Short-Cut keys to Menus.
Feb 08,2006 - Fixed: Adding New Group ID as HEX in Trunk ID Editor.
Feb 08,2006 - Fixed: Adding New Radio ID as HEX in Trunk ID Editor.
Feb 08,2006 - -----: Increased Width of Trunk ID Editor.
Feb 11,2006 - Added: Display Misc Messages in CC Activity - taken from Dump.
Feb 12,2006 - Fixed: Private Calls in MOTO doesn't save Radio ID as a Group ID.
Feb 12,2006 - Fixed: One Moto SysID Message was being treated as a Call Message.
Feb 13,2006 - Added: Moto CW Id Freq/Chan Now Noted in CC Ativity.
Feb 13,2006 - Fixed: "Delete Off Air" in CC Activity - 1 Entry now Removed.
Feb 17,2006 - Added: Group Desc now Editable from Patch List in CC Activity.
Feb 17,2006 - Added: More Descriptions to ***Unknown Radio Messages***.
Feb 20,2006 - Added: Moto Diagnostic Messages in CC Activity.
Feb 26,2006 - -----: Changed I.F Filter to 15khz when 3600 Baud Selected in Trunk Settings.
Feb 26,2006 - -----: Group/Radio ID's Erased in Trunk Settings when confirmed.
Feb 26,2006 - Fixed: Editing ID's greater than 32767 from CC Affil or Control List.

Version 0.7.185 Released 02/26/2006

Regards,
Jay

Well, here in the UK, have today recd and fired up a PCR-1500.

No prob with drivers etc., but didn't bother to reboot so spent a frustrating few hours trying to get some sound down the USB. The Rx speaker fired up no prob.

Have used ReCall-Pro for recording for years, so will try and continue using same.

Have been using the 1000 for several years non-stop, literally, so will have to read the book again to remind me what everything does on the 1500

The current feed for Northern California (NorCal) Fire at
www.publicsafetyfeeds.com is running
a PCR-1000 as the feed radio. It feeds both Teamspeak and Winamp.

4342. TrunkPCR version 0.7.187 Update Available for downloading

Yahoo group: PCR1000
Date: 2006-03-18 03:15:03 UTC
From: Jay
Topic: 4342 Message: 4342

This update fixes a couple bugs and adds 2 NEW Options:

Feb 27,2006 - Fixed: Setting Reverse Polarity while Trunking.
Mar 01,2006 - -----: Increased Max Radios Again...
Mar 05,2006 - Fixed: Private Calls in MOTO Display and Resume.
Mar 06,2006 - Added: 2nd Receiver Option.
Mar 06,2006 - Added: Priority Calls (only using 2nd Receiver Option).
Mar 07,2006 - -----: Modified "Hunt on Dataloss" Again...
Mar 08,2006 - -----: PCR-1500 Firmware Code Now Recogonized.
Mar 08,2006 - -----: Trunking Resumes Now when TrunkBank Right-Clicked
(Move to TrunkBank).
Mar 08,2006 - -----: Trunking Resumes Now when TrunkBank Left-Clicked
(TrunkBank De-Activated).
Mar 09,2006 - -----: Trunking Resumes Now if a Group is set as
Locked-Out.
Mar 15,2006 - Fixed: COM Ports higher than 9 Now usable on XP.
Mar 16,2006 - Fixed: Trunking Banks now Disabled for Conventional Scan if
previously set.

Version 0.7.187 Released 03/17/2006

1) Second (Dual) Receiver Option.
For this option to work, you need to have a second receiver with a
discriminator tap.
With the cable you had plugged in the Packet Connector on the PCR,
plug it now into the "Discriminator Out" connector on this radio.
(You may have to change the Reverse Polarity in Trunk Settings for it to
decode)

2) Group Priority Levels.
This option will only work if the Second Receiver Option is used...
You can now program a priority level for each individual Group ID.
The Highest Priority is 1 and the Lowest is 99, Default set to 50.
Emergency Calls are designated Priorty 1, Private Calls is set to 2...

3) Minimum Support for the PC/R-1500 at this time...

Thanks, I am finding this very useful.

Which reminds me: There is one thing I always wanted to ask
but keep forgetting:

Do you need some sort of a licence from Motorola if you
decode their code? I mean, is the code patented in some way?
For example, if I develop trunking code for EDACS and LTR,
do I need to buy some licence from somebody? And how do I
get the description of the code?

4348. Re: [PCR1000] Re: Computer noise

Yahoo group: PCR1000
Date: 2006-03-18 15:34:09 UTC
From: Doc
Topic: 4324 Message: 4348

Well, I have some RFI caused by my win98 computer running PRO-1000
software, but it only causes interference to a TV located within inches
of the computer.
The way to "creect" it is to move the TV away from the computer, but
Part 15 says that you have to accept any interference caused by this
device.
One other way, is to make sure you have everything properly grounded.

From: contranl
Topic: 4350 Message: 4350

.

Anyone have a list of "Birdie" frequencies in the PCR1000 ?

I like to compare them with those i found in the R1500:

http://www.tetrascanner.com/icom-r1500-birdies.html

Thanks !

Hi Pat,

You need a licence from Motorola and G.E. if you are going to "Sell" your programs.
Motorola is giving the author of Aus-Trunk a hard time about it...
I, on the other hand, Do NOT Sell TrunkPCR... I accept Donations...
(A Very Fine Line) That I don't cross...

Regards,
Jay

There is no such thing as a "list of birdies".
Each radio is different from others, and the geographical location as
well as the position on your bench or table in your room will vary.
Also, what you may interpret as a birdy, may well be intermod.
There may be somne folks who will disagree with me, but the above is my
experience.

Doc.

HI Doc..i have to disagree
Let me give you a definition of "birdies"

Birdies are signals generated in the scanner itself
they are caused by for example oscillators.

Since every PCR1000 or R1500 is designed the same and uses the
same oscillators (crystal-frequecies)...there will be the same
birdies.

To find birdies in a scanner you DON'T connect the antenna
since you only want signals coming from inside the scanner.

The geographical location has nothing to do with it
The position on the bench neither
Intermod has nothing to do with it either.

...simply because the antenna is NOT connected

So YES there is a list of birdies and they are the same
in all the scanners of the same type.

While I've had alot of scanners,some with more birdies
than others,I cannot remember ever getting a birdie on
my pcr1000.Not saying they don't exist.Just not very
many.

4363. CTR-BlueAir for the PCR-1000 now available

Yahoo group: PCR1000
Date: 2006-03-27 06:16:49 UTC
From: Lynn Hansen
Topic: 4363 Message: 4363

Hello all,

I have just released a new Bluetooth interface for the PCR-1000 that works with CTR-Rcvr software for the Pocket PC and CTR-PCRcvr software for the PC.

Using CTR-Rcvr and CTR-BlueAir you can easily take your PCR-1000 mobile/portable without lugging a notebook PC along for the ride.

The new unit is available in kit form or fully assembled and tested. Visit my web site for details, www.lynovation.com <http://www.lynovation.com <http://www.lynovation.com/> >

4364. Ongoing saga of rs232 ports

Yahoo group: PCR1000
Date: 2006-03-27 15:18:59 UTC
From: peterxrm
Topic: 4364 Message: 4364

Hi
I have made various posts on my dilemmas over my shiny new laptop and a lack of rs232 ports.
USB/rs232 adapters caused intermitten conflicts so gave up on them.
I have had to add an external PC card that gives me two more rs232 ports. It seems to work AOK into the PC card slot of the laptop.
When I dock the laptop and place the card in the dock port it rings up a port conflict-I am awaiting a response from the laptop/dock station manufacturers' (Acer) on this conflict.
I use the Icom software for my pc Rev 2.2-however this only allows a port connection up to port 10-my pc auto loads Bluetooth & WI-FI so ports up to 10 are used-I require to set port 14 to the Icom software.
Any Ideas?
I don't want to re-assign the auto loading ports elsewhere as a deep trawl shows they are used by more than one item. Tried it and ended up with a right mess!
The Ham Radio Deluxe software works AOK but I am use to the Icom software.

From: jdrazorscooters
Topic: 4365 Message: 4365

http://www.kinetic-avionics.co.uk/sbs-1.php

Has anyone any experience using the SBS-1 with a PCR1000? In case you are not familiar with the SBS-1 it allows you to track Mode S transponder equipped aircraft on a virtual radar screen on your PC monitor. It interfaces with the PCR1000 to allow 2 clicks to any frequency.

Pretty amazing toy, been thinking about getting one. The site above has photos of the software in action.

Cheers,

MW

Peter,

Although Windows XP can support up to COM256, using any port greater
than COM8 is often problematic.

Pretty much every USB-to-Serial and PC Card device that I have seen
will let you manually bind to a specific COM port, although you do
need to take care to choose a free port.

I cannot imagine how the devices in your notebook or notebook +
docking station could possibly take up so many ports.

Bob

I'm not quite sure what your needs are, but after I bought my Dell Inspiron 1100, I found that it did not have very many options as far as the ports were concerned. I bought a TARGUS Port replicatior. It plugs into a USB port and provides one serial, one parallel, two PS2 ports and two usb ports It also has a wired network port. It is plug and play on an XP machine, and comes with a disk for win98 and earlier machines. I found that rather than fool around with post assignments, I just bought a cheap (50bucks) older laptop running win98. My pcr-100 works fine with no problems.

4369. PCR 1000 for sale.

Yahoo group: PCR1000
Date: 2006-03-31 18:24:26 UTC
From: valenfor
Topic: 4369 Message: 4369

I have a PCR 1000 for sale with original box. It has seen limited use (less then 50 hours) and been mainly collecting time on the shelf. I need to sell it and would like to get it into a good home where it will get used. I paid $540 for it originally in 2004 from Ham Radio Outlet, I am asking $300 firm. I can accept payapl.

Please email me directory with questions or if you are interested valenfor@...

Thanks,

Kevin

Yes, I've seen this device off ebay, at their site.
My question is, , ,
If you bought a software controlled radio to run on a comnputer, why
would you want to run it as a stand-alone??

It's not a problem finding an antenna in that range. Just go to any friendly commercial radio shop and ask them to order you one. They are available from several different sources. Here's one:

From: michel_vr5k
Topic: 4302 Message: 4383

Hi Stuart

Could you get more info about your "strange" additional board ?
Are there any markings on the PCB, or on the IC's, or any IC brand ?

If this is the UT107 unit (a DARC decoder), did you notice any
additional software window, showing something close to this screen : ?
http://www.icom.co.jp/products/receiver/ic-pcr100/index.html
(please scroll down)

I am interested in this issue, because it seems that DARC slowly
develops in european countries, too. Finland, Denmark has already
available networks providing weather/news/road/... informations, and
Paris is about to start such a service too, in the next months.

Thanks
Michel

Hi Michel

Thanks for your email. I'd forgotten all about that thing, it's a UT107 as you thought. I spoke to ICOM and they confirmed it, but the downside is you get nothing using the UK version of the software. So I guess it will only work with the Japanese version and you can't read that so it's obsolete. Damm shame because that would of been great.

Regards
Stuart

4386. New version of Shortwave Log released

Yahoo group: PCR1000
Date: 2006-04-15 06:30:07 UTC
From: Robert Sillett
Topic: 4386 Message: 4386

A new version of Shortwave Log has been posted, and this version adds a small, but important, feature for PCR-1000 users. For over two years now, I have completely overlooked the CTCSS tone command. (I guess it's now obvious that I never use my amateur radio license!)

This new version adds CTCSS tone support to the Radio Control Server component of Shortwave Log.

You can download Shortwave Log from http://www.shortwavelog.com

I did a Google search for PCR2500, selected the first result in Japanese and selected translate. Here is the un-translated URL

www.icom.co.jp/products/receiver/ic-r2500/

If what translated is true, this will be really cool, two receivers in on small computer controlled black box. Pictures, specs and pricing (in yen) are on the page but I did not see any date of availability.

A dual diversity receiver for the same price as the 1500.
This is something worth waiting for. Good thing I waited
and didn't buy a 1500 when the 2500 are so much better!

Ubbe.

I thought the PCR-2500 is the PCR-1500 with the control panel option for a few dollars more.
Apart from that, has anybody any links to reviews about the PCR-1500?
Is it a better performer than the PCR-1000?

Fred.

Topic: 4396 Message: 4396

PCR Remote - Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100,
PCR-1000 and PCR-1500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or
Windows Media Encoder will enable you to hear your radio from a remote
location over the internet...

Regards,
Jay

Hi Friends!!!

I mess up my pcr-1000 and I lost my eeprom backup. Now I'm needing help.
My PCR-1000 is a Canadian open version (202 351 102A) , serial number 0701242.
I tried some backups, that I found here, but all are giving some error. I think this is because my PCR is open. Please, send to my email or post in the file area a PCR-1000.RAD for this version or close of this version.
Thanks.

As amazing as it may sound many people do not realize how easy it is to LEGALLY stop paying for their groceries! This is how the one hour television show began for the company whose website is at: http://dealsofthecentury.com I thought it was very interesting and decided to check it out. I am very skeptical by nature so the first thing I did was check out the company. I contacted the Better Business Bureau and found that the company has had no complaints lodged against them, I also contacted Paypal who has verified this company. They told me that they verified the company's licenses, bank accounts and other paperwork indicating to them that the company is legitimate. Then I started asking co-workers and friends about this program and to my surprise 6 out of the 10 people that I spoke with were already using this program. They told me how pleased they were with it and how much money they had saved and are currently saving. So I decided to sign up for their sampler (which offers one of every product they carry) program on 4/11/06. On 4/18/06 I received my complete membership package and the fun began. Using their program and the free lifetime membership that it includes I went to the supermarket ready to make a killing. The cashier rang up my grocery bill and it came out to $239.87 then I presented her with the coupons I received from this program and I saved $223.38 - my final bill was only $16.49! The cashier wasn't the only one shocked. This program has changed my life!

4407. Re: [PCR1000] pcr1000 and win95

Yahoo group: PCR1000
Date: 2006-05-11 05:45:25 UTC
From: acatherder@comcast.net
Topic: 4405 Message: 4407

PCR-1000 runs ok under Win95. It's just that you have to make sure that you're not using a Null-Modem cable for the interface from the radio to the PC...also, there's a registry hack that prevents the serial port from timing out...I'll scrounge it up if I can get the time...right now, at work and the registry hack is at the house.

From: tbkirky
Topic: 4408 Message: 4408

I bought one of these units on eBay and guess what, no instructions for installing! Does anyone have a copy that you could send me by email or fax? Also, this unit is enclosed in a little leather case - I've never seen that before. Am I supposed to remove it? It would have to be cut away with a blade. Thanks for any help.

From: Fred
Topic: 4405 Message: 4410

There's some other Windows and DOS software here http://qsy.to/pcr/control.html

On later operating systems, other software (including "HAM Radio Deluxe") do far better justice to the capabilities of the PCR1000 than the Icom supplied stuff.

:-)

4411. SSB Reception

Yahoo group: PCR1000
Date: 2006-05-14 07:12:10 UTC
From: peter451594
Topic: 4411 Message: 4411

Hi chaps, i have never owned or used one of the Icom pc controlled receivers, but i am feeling the urge to get one. I can appreciate their capabilities for scanning, however i will mainly use one for ssb reception in the HF band.
The question, just how good are they on ssb?

Any thoughts will be appreciated.

Regards.

From: Robert Sillett
Topic: 4411 Message: 4413

The PCR-1000 does a decent job at HF reception. But it is not as good of a shortwave receiver as a receiver that only receives 500 kHz to 30 MHz.

If SSB is your primary mode of listening and if you are not concerned with having an all-band receiver capable of picking up VHF & UHF, I would recommend that you get something like the Icom IC-R75 or Ten-Tec RX-320D. Both are better than the PCR-1000 on HF and both can also be computer controlled.

Also the Ten-Tec RX-320D has (if I remember correctly) 28 filter sizes, which provides much more flexibility than the stock 2.8 kHz filter on the PCR-1000.

Bob

DSP UT-106 is really brilliant and leaves me super dialogues impossible
without, because antenna not consequently. if not there is the UT-107 which
is a software filter and on "TalkPCR" the DSP is integrated and in way
software too. Cordially.

Be careful not to overload you pcr1000 with a longwire.... I damaged my
radio with one. The front end gets overloaded very quickly....

Just my experience, with HF and PCR1000.

Wht get second best? The WinRadio G303, or better still, G313, are by
far superior to both of these.

See http://www.winradio.com/g3 .

And continuously variable filters on the G303 or G313 give you even greater
flexibility.

Hi Peter
I have to agree with Patrick-the Winradio series 303 or 313 are
excellent HF receivers with a myriad of software controls and facilities.
Add accuracy and ease of use also.
Winradio 313 also extends from 9kHz to 180MHZ all mode.
Well worth exploring-download the software and try without the receiver
to check out the functions
Top that with a manufacturer that actually updates the software and will
communicate with you should you have a question.
What better after-care do you need?-beats Icom hands down.
regards
dave G8SZX

A lot of hams suffering upgrade fever will sell their "old" PCR1000s cheaply. SSB filtering is practical but you could try software to process audio via your sound card.

With the UT106, it's an excellent general coverage receiver and works very well with a 16 foot whip located well away from computers and TV. Use a preselector for your preferred HF bands (Yaesu made a nifty little one).

I'd add my thoughts that the PCR-1000 was badly let down by the original software. The free "Ham Radio Deluxe" software I've begun using has made an immense difference and is an ongoing project supporting many other radios.

Regards,

Fred.

PCR Remote - version 0.5.020 Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100,
PCR-1000 and PCR-1500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or
Windows Media Encoder will enable you to hear your radio from a remote
location over the internet...

Updates:
May 17,2006 - Added: Direct Entry of Frequency using keyboard.
May 17,2006 - Fixed: Entry of Frequency when Double-Clicking Frequency Text.
Version 0.5.020 Released 05/17/2006

Regards,
Jay

4423. PCR Remote - version 0.5.22 Beta is Now Available

4428. RxPlus Summer Special & New trial period

Yahoo group: PCR1000
Date: 2006-05-30 16:53:10 UTC
From: Noel Bouchard
Topic: 4428 Message: 4428
Attachments: 1 described; binary payloads are missing from this source WARC

Hello SW listeners !

For most of us, summer is a rather quiet period on the SW listening side ...
But here is a good reson to get back to it !

I am offering a summer special on my RxPlus
Controler / DSP audio Processor / Digital decoder / DB Manager / software:
All details at: http://www.cam.org/~noelbou/RxPlus

You can now get RxPlus for only $49.99 !
That's MORE than 1 / 3 off the regular price of $79.99.

+--+
RxPlus has been reviewed in Monitoring Times (Aug. 2005):

"... RxPlus has become my standard monitoring program against which all
will be judged"
John Catalano, MT August 2005

See the full review at:
http://www.cam.org/~noelbou/RxPlus/RxPlusMT_Review.pdf

+--+

NEW Free TRIAL Period:

For those of you who already have used the trial period, the latest
version will grant you
another 30 days free trial period., so that you can try the latest
version (V1.94).
You cn get the new 30 days free trial by re- installing the latest version.
If you never installed RxPlus, you will also get the 30 days free trial.

+--+

Noel Bouchard
RxPlus Developer

Yes, they are. Providing they are of INTEREST to the Group.
We should really encourage Third Party Software development. These are
some of the BRIGHTEST people, creating software on their own time.
And sharing it with us.
Also, let's not forget about the folks building external interfaces for the PCR.
Or you can but them from Icom, when they get around to helping the PCR-1000
users.
Even the FCC has given up excluding 'commerical business' from taking place
on the 'ham' airwaves. NO, you can't broadcast ads, but you can call for a pizza!

Noel can this software be used with a TCI-8174 and TCI-8172 I have both of these recievers and would like to see if this would work with it.
I stated that I would like to see a CW decoder built into this fine software you have produced.
You say this does a fine job with ritty and PSK ect.
I was wondering does mean I can see the ritty decoded on the front panel screen?
If so I would love to give it a try.
THanks for you hard work.

Thank you Skip ! It is nice to see that some peoples understand the issues about developing software and markting it for such a small market that SW listeners ...

> Pourquoi il parle pas Fran?ais ton Rxplus?

D?sol? cher ami, mais la demande ne justifie tout simplement pas une version en Fran?ais ...

> advertising should be posted with the prior permission of the moderator.
> (Personally, I'll stick with "Ham Radio Deluxe")

Did you ask the moderator for this one ;-) (lol) Or only commercial ware needs to ? Just joking don't take it bad ...

Seriously i did not know that we could go through the moderator since the group is "unmoderated" ... I will do this next time ....

P.S. My (unnamed / commercial) software has been released for over 2 years and as far as i rembember i have posted about it only but a few times over this period ...

Hello to Noel,

PCR1000 software is certainly a good topic for discussion and I'd like to reply to your response.

I said "...advertising should be posted with the prior permission of the moderator" and by this I meant founder, owner, responsible person or whoever runs a forum that you have to go through a joining process before being accepted and allowed to post.

Unwanted posts still find a way in and on some forums you see people blatently promoting their businesses to sitting targets - some very vulnerable. Fortunately, as many give freely of regular good advice and their long experience with mere mention of their professional interests should a reader wish to follow-up directly.

My suggestion is that in the case of a professional anxious to advertise a commercial (implying profitable) software, it seems courteous, less assumptive and good business to check beforehand. Refusal at that stage is not public - but - it might be that an announcement with a link woud be preferred to a full advertisement or there might be a sensitivity born of past experiences. It might even be that the (moderator, whoever) might have some good leads or suggestions to help promote the product.
That you "will do this next time" was good to read.

A sting in the tail is how advertisements do attract scrutiny and comparison. I bought one of the earliest PCR1000s and for a long time my enjoyment was severely limited by the Icom software. I tried other (some paid for) but my mention of "Ham Radio Deluxe" was as a recently impressed new user of that constantly evolving freeware - developed (to paraphrase Skip) by "...some of the BRIGHTEST people, creating software on their own time. And sharing it with us ".

Software is very much "horses for courses" and there's value in knowing what exists - and what it will do for you. Your own (unnamed but remembered) software does look interesting and well reviewed and I hope your adverts (not too often please) will yield returns.

I hope I've explained my line of thought but what say others here?

73,

Fred.

I also agree that anything to do with PCR-1000 receivers especially new software.
It doesn't matter if the cost is free or the software developer wan't s few bucks.
This type of informations should be encourage at all times.
This is a great site for all of owners of the PCR 1000 receivers.
Noel keep up the good work.

4439. Working with active antennas?

Yahoo group: PCR1000
Date: 2006-06-01 07:43:25 UTC
From: Robbins, Matty
Topic: 4439 Message: 4439

Hi All

Since I do not have room for a full long wire antenna I was thinking of getting an active antenna. I was thinking of two options. MFJ-1020C (Indoor antenna) or the outdoor option MFJ-1024.

I have a few question that I am sure I can get some answer on this great forum.

1) since this are active antennas will there be a problem (or danger) to the PCR1000 from overloading?

2) Does anybody have experience with these antennas since I did not find hardly any info or review of them on the net?

Thanks

Matty

4440. Re: [PCR1000] Re: [Digest Nr 1148] - PCR1000 Software - A topic for discussion.

Since I was the one who asked if commercial ads were allowed, please let
me elucidate.
I was ONLY asking the question, and NOT complaining.
It seems that some people here are very sensitive, so I just thought I
would point this out.
Also, I noticed that it was crossposted to many other lists..
THAT, I know, is not very good manners.

What's a PCR-1500?

BTW, cool idea. What is the lowest latency solution that you know of for streaming the audio? I've been using WME but the four to eight second delay is dreadfully annoying.

Icom has released a new radio that goes up to 3,300mhz.
It's been out for a couple of months now...
There's also a PCR-2500 coming out soon too.

One of the users has reported teamspeak as being a low latency setup.
You can grab Teamspeak at http://www.goteamspeak.com .

From: Robert Sillett
Topic: 4435 Message: 4443

Windows Media Server has extremely low latency and can support a very large number of connected clients. The trouble is that it is part of Windows 2003 Server, which is a tad expensive for home use.

Real Helix also has low latency and can be found in a free, five-user version.

The Apple Quicktime server can be found in an Open Source format under the name Darwin Streaming Server. It is also quite effective.

Microsoft, Real, and Apple are your tier-1 providers. Everything else is specialized. Here are some other options:

* Unreal Media
* Team Speak
* Skype
* VLC Media Server

Bob

It is documented in the TalkPCR help file, but here you go:

Format of the `.FQL', (frequency lists) files used by TalkPCR.

The file is a comma-separated variable ASCII file. There are 19
fields per entry, they are defined below.

1 Frequency, Decimal number, with or without leading zeros

Examples:
0.198 =0.198MHz
0015.070002 =15.070002MHz

Default is 0.0MHz, but this will cause an error, as the radio cannot
tune 0MHz.

2 Detector mode, ASCII hex pair, default=02, AM.
00=LSB
01=USB
02=AM
03=CW
04=Not used
05=NBFM
06=WBFM

3 Bandwidth, ASCII hex pair, default=02,15k
00=2k8
01=6k0
02=15k
03=50k
04=200k

4 Description, Text field, default""
Note that a description cannot have a "," in it!

5 Volume, ASCII Hex pair, default=00, mute.

Range is 00 for mute, to FF full volume.

6 Squelch setting, ASCII Hex pair, default=00, open.
Range is 00 for open, to FF full squelch value, note level squelch
starts halfway at 80.

7 Tuning Step, Mkformat, Default=25k.
Examples:
50 = 50Hz
12k5 = 12.5kHz
100k = 100kHz
33k3r = 33.3333333kHz
1M0 = 1MHz

8 IF shift, ASCII Hex Pair, default=80, centre.
Range is 00 for to FF

9 AGC state, either 0 for slow, or 1 for fast, default 0, slow.

10 Attenuator state, either 0 for off, or 1 for on, default 0, off.

11 AFC state, either 0 for of, or 1 for on, default 0, off.

12 Noise Blanker state, either 0 for off, or 1 for on, default 0,
off.

13 Scan Flag state, either 0 for on, or 1 for off, default off.

14 Srv text field, default=""

Text for the Srv or service field.

15 Location text field, default=""

Text for the Location field.

16 Duplex off set, Decimal number, with or without leading zeros,
default="", none.

Examples:
1.6 =1.6MHz
0.6 =600kHz

17 Tone squelch, ASCII Hex pair, default=00, off.

18 VSC, Voice Squelch, either 0 for off, or 1 for on, default 0,
off.

19 DSP, Digital Signal Processor, ASCII Hex pair, default=00, off.

Matt,

It is my guess that it is just the front end.
The radio stills behaves using TalkPCR, just does
not receive any signals. I even confirmed
the ROM contents - and all is fine. So my best
guess is fried front end.

There is usually a couple of capacitors and a couple of diodes that get fried.
The one I bought really cheap because the front end was blown had this very problem.
Like Skip says if you can get the noise level to go up and down I could probably save it.
It just depends on how far down the strike went.
The way to know is send it to me and we can go from there or you can send it to ICOM which might cost you a lot more.

From: Dan Cotsirilos K9DTC
Topic: 4461 Message: 4461

This the commercial version of the RX-320. This radio blows away the PCR-1000 on the HF bands. 34 DSP filters etc, full sensitivity and with this version the dynamic range, image rejection is superb!

This is a fantastic computer controlled radio. here are eham reviews about it.
http://www.eham.net/reviews/detail/4999
Comes with software and RS-232 cable. $275

I have integrated the FCC latitude/longitude information into my
Probe database, what questions do you have?
Honestly, I think is an even better solution than Mappoint these
days.
If you get your FCC data from Percom's Spectrum online database you
can have it export the frequencys as a Google Keyhole .klm file.
You can then take the file and add it as a layer into Google Earth.
You can then use all the features of Google Earth, plus see all the
transmitter sites. It is really cool.

The one I bought really cheap because the front end was blown had this very problem.
Like Skip says if you can get the noise level to go up and down I could probably save it.
It just depends on how far down the strike went.
The way to know is send it to me and we can go from there or you can send it to ICOM which might cost you a lot more.

While I am a technician /engineer by trade I have not worked on any other Icom I am going to try my hand with a Icom 71A if it ever gets here.
I won it on ebay several months ago and the seller Ham is giving me the run around as to when he is going to ship funny he has my money but no receiver.

4474. What software

Yahoo group: PCR1000
Date: 2006-07-26 11:14:12 UTC
From: Randy True
Topic: 4474 Message: 4474

Hello from a new PCR1000 owner. At the risk of getting a whole bunch of "read the archives", I didn't have time to puruse 600 software related posts.

I'll be using Probe1K for Vhf/Uhf. I'm very familiar with Perry's software, and I have found none better.

What is the concensus, or is there one, for the HF part of the receiver?

I have RadioComm 4.5 and the Icom software that comes with the receiver.

Thanks,
Randy True

Hey, Randy...
List Hint #1... New question... NEW SUBJECT.
'What software' pertains to SPAMMING THE LIST;
your message doesn't... and probably gets trashed by many...
thinking it's about spam...
I use (and help moderate) talkPCR. But there's also several other
out there, swlog LOGS your listening to the internet... so if you
found something, everyone learns about it quickly.
There are several. I think you may be going around it the wrong way.
It's like asking a library to publish a BOOK about all the BOOKS in the
library. Of, course, dial-up ruins most good internet experiances.
73 and have a good day...

Check out SWLog or Ham Radio Delux or RXplus.
Each has it's strong points, but all are great programs for HF!

Randy,

Try key word or subject searches with Yahoo's search
functions.

The HF receiver can overload with long antennae and
benefits from a preselector.

Thank goodness there's better than the Icom software.
Ham Radio Deluxe is my favourite just now.

Make sure the "wall wart" supply doesn't make your
radio run too warm. Mine's always cool at 12V.

DSP = Digital Sound Processor. So it's audio.

I beleive DSP = Digital Signal Processing.

My TenTec RX350 provides DSP at the IF stage.
I have a Timewave DSP-599zx, which provides DSP on the audio.

Big difference if you can clean up the signal before it reaches the
audio stage.

O.K. You are right, but in this case it is audio as it is connected
behind the demodulator.

Wolfgang

UT-106 works its magic in the audio portion of the receiver. Sure would have been nice if it were in the IF, but unforutnatly, that's not the case here.

Agree, there is none.

> I dont think he is making a living off this site.

And what if he actually *was* making living out of it, where exactly
would be the problem?

I am finding it unbelievable that someone would use words such as
"greedy motherfucker" simply because someone wants to charge for
his goods/services!

No-one is obliged to buy his CD ROM, but if Lindsay sells a lot of them
then I would call this a success and applaud his initiative. Obviously
they wouldn't sell if the purchases wouldn't consider them a good value.

Under capitalism, trade is done to *mutual* benefit, and no-one is
forced to buy each other products. To force one to give away one's
goods or labor for free is communism - and the good old Soviet Union
has already shown us in practice how "well" this works.

And one of the motivating forces of communism is envy, which I suspect
was the primary motivation of the original poster.

4493. PCR1000 Support to APTDecoder

Yahoo group: PCR1000
Date: 2006-08-01 17:14:03 UTC
From: Patrik Tast
Topic: 4493 Message: 4493

Hi all,

If you are receiving *APT weather satellite images from NOAA satellites with your pcr1k, I have
now added support for your receiver to APTDecoder.
I have not tested a Serial->USB cable or the new PCR, just with a straight RS232 cable.

I have programmed it to use the narrow FM 50 kHz bandwidth. There is also a simple tuner with enough features
needed for us weather folks http://www.ptast.com/apt/decoder/images/pcr1k_tuner.jpg

You'll find my received NOAA weather satellite images at
http://www.ptast.com/apt/logs/daily/index.html
(received with the R2FX-receiver http://www.df2fq.de/)

Get the opensource APTDecoder http://www.ptast.com/apt/decoder/

*Automatic Picture Transmission

Regards,
Patrik Tast, Finland

Hi there. I have also tried to get rid of the 5 minute pop-upp on my version of Talk Pcr 2.4F2 without success - I thought I had a clean one but the POP UP still comes up - is anyone able to let me have a clean / cracked version. It would be appreciated. Many thanks Nathan

Many thanks for your helpful replies. However, I did originally download the 2.4F2 version from mahy's site and this is the version I am running - the pop-up says "Talk Pcr is now free ware" and "you have run this program x times". I am running on Windows 2000. I have tried reinstall and was thinking that it may be a registry bug or some thing. Am I better going to version 2.4 even though it appears to be an earlier version?

Any further tips would be appreciated - I love the program and would pay £10 to stop the pain every 5 minutes!

Nathan

From: Peter Morrison
Topic: 4503 Message: 4503

Hi everyone
I only recieved my PCR1000 over the weekend and am delighted with it. I bought it from a nice guy in Stockport. who ha it from new,even original box in pristine condition. Tried it at length over the weekend and am very,very impressed.
If you would care to tap my callsign into QRZ.COM you will find a little more about me and my interests. For some reason QRZ shy about divulging my email add, but eHam.net captured full, up to date bio and display it quite clearly.Am using Icom 2.2 software and am pleased with it. Not too impressed with Talk pcr however,
Regards Peter Morrison

4510. Optoelectronics Digital Scout

Yahoo group: PCR1000
Date: 2006-09-14 15:37:40 UTC
From: Ian
Topic: 4510 Message: 4510

Does anyone with a PCR-1000 also use a Optoelectronics "Digital Scout" to input frequencies "on the fly"? This seems like a great way to scan and input frequencies in an unknown area.

4511. Re: Optoelectronics Digital Scout

Yahoo group: PCR1000
Date: Unknown date
From: Ubbe
Topic: 4510 Message: 4511

You can only let the pcr1000 monitor the frequencies you have in you analog or digital scout's memory or the ones they captures live.

While you are out of capturemode you can step through the memory and the pcr1000 will be tuned to the displayed frequency.

I find Unidens CloseCall feature of being much easier to handle and gives a smaller package with many more options of how you capture and use the frequencies.

Ubbe.

I've got one and it works great with the PCR1000.
The cable from them is a joke for $60. You can make
it yourself for $5.

I've been thinking about selling my digital scout and PCR1000
cable as I don't use it anymore. If interested, email me off list.

A few months ago there was a person who posted a link for a free program for decoding weather satellites. I dont remember which group he posted in but I know it was one of the PCR gorups. If I can recall it was sometime between MArch of this year foward.

Please help,

Glenn

Try this program link. It does APT Decoding.

HYPERLINK "http://www.wxtoimg.com/"http://www.wxtoimg.com/

Hope this helps.

I found the message and it was back in August. The program was/is called APTDecoder but the link is dead. Does anyone know where I could find this program?

Thanks,

Glenn

Hi Glenn,

Yeah, the link was broken between Sunday (17 September) 21:00 and
Monday 09:00 UTC due to a computer failure at my web-site provider, sorry
about that.

Please try again
http://www.ptast.com/apt/decoder/

4520. Re: Optoelectronics Digital Scout

Yahoo group: PCR1000
Date: 2006-09-18 23:36:29 UTC
From: Ian
Topic: 4510 Message: 4520

Am I just dense, or is my Digital Scout not working as it should! It seems to be basically "black box" operation - turn it on and let it find frequencies. Where I live I receive all kinds of signals with my PR PRO-96 digital trunking scanner, but the Souut just sits there, has not found a frequency at all! I've put on a couple of different types of scanner antennas, as well as a big Radio Shack discone, and still no frequency capture. The manual is a bit shy of the basics, but it can't be that hard! What am I missing?
Ian

Patrik,
Your program looks great but I have to sit down and learn it.
I do understand about satellite communications since I used to activly work UO-14,PCSAT and AO-27 a few years ago but I lost my rotator from a lightning strike.
Right now I dont think Ihave enough antenna to get a good picture.

The Scouts are considered "near field" receivers and won't pick up anything (even connected to a large antenna) unless it is relativly close.

4525. Re: Optoelectronics Digital Scout

Yahoo group: PCR1000
Date: Unknown date
From: Ubbe
Topic: 4510 Message: 4525

The Digi Scout force you to constantly adjust the squelchlevel depending of what background level of noise you have. If you don't do that it will perform very poorly. Actually in analog captures the Scout40 easily outperfomes the Digital Scout.

Best bet is to use a filter to only pass the frequency band of interest to a Scout. You could use 1/2 wave open ended stub or short circuit ended 1/4 wave stubs as bandpass filters.

Ubbe.

4526. TrunkPCR version 0.8.200 Now Available

Yahoo group: PCR1000
Date: 2006-09-23 03:31:24 UTC
From: Jay
Topic: 4526 Message: 4526

TrunkPCR version 0.8.200 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

I've been testing this new version using a PCR-2500 that has been graciously loaned from Vincent Battle... P25 Card support is still undergoing and I need your feedback to fix any kinks. To activate P25 decoding, you will have to click the FSK Mode button. It will change to P25 instead.
All of your active Control Channels will need to changed to P25, other channels will need to be changed to FM...
Any old channels that were set to FSK will have to be changed to FM and "Stored", otherwise you will get strange results when listening...

This update fixes a few bugs and has a few changes:

May 04,2006 - Added: Channel Selector using a List Display - 1 Click Tune.
May 07,2006 - Fixed: Group/Radio ID Descriptions now updated on main window.
May 08,2006 - -----: Group/Radio ID Descriptions can now be Clicked ONCE to edit.
May 09,2006 - Fixed: Multiple Displays of Frequency in CC Activity, if LCN=0.
May 09,2006 - Added: List of System Pages in CC Activity.
May 09,2006 - Added: List of User Status Updates in CC Activity.
May 09,2006 - Added: Audio Spectrum Display.
May 10,2006 - Fixed: Control List display in CC activity when Afiliation Reset Clicked.
May 12,2006 - Added: 6 Watch Group Lists in CC Activity, Set in Trunk Settings.
May 12,2006 - Fixed: Logging Buttons in Dump Display if 'Dump.Log' NOT Opened.
May 12,2006 - Fixed: Logging Buttons in Misc Display if 'Misc.Log' NOT Opened.
May 13,2006 - Added: Time Stamps to Dump and Misc Log Files.
May 18,2006 - Added: KeepAlive Function. Default was ON in Previous Versions.
May 18,2006 - Added: Raise DTR Function. Default was ON in Previous Versions.
May 21,2006 - Fixed: Dual Receiver mode in Edacs.
May 21,2006 - -----: Edacs LCN 26 to 31 Report Messages. No longer used as active channels.
May 21,2006 - Fixed: Updating Stored Freqs when Channel Editor Saved.
May 22,2006 - -----: Increased Max Groups and Radios Again.
May 22,2006 - -----: Increased Max Banks and Channels for $50 donations.
May 23,2006 - Added: Direct Entry of Frequency after using any knobs or menus.

May 30,2006 - Fixed: External Speaker Selection for PCR-100 when pluged-in or out.
June 04,2006 - Fixed: COM Status Display when Spectrum Sweep Enabled/Disabled.
June 08,2006 - Added: Decoding Wave Files for Moto/Edacs Trunking Systems.
June 15,2006 - Added: Block Data Calls in Edacs.
June 20,2006 - Fixed: I-Call Reporting in Edacs.
June 22,2006 - Added: ESK Selection in Edacs.
June 23,2006 - Fixed: Edacs Dotting was set to Zero when Trunk Settings loaded.
June 24,2006 - Fixed: Scanning in Conventional Mode when ScanBank Count = Zero.
June 29,2006 - Fixed: Menus Enabled/Disabled when Sweep Spectrum Selected/Deselected.
June 29,2006 - Added: 7.5 khz Step Frequency...
July 14,2006 - Added: MPT-1327 Trunking Support. (Minimal at this time)
Aug 18,2006 - -----: PCR Type Setting now Automatic. Menu Removed...
Aug 18,2006 - Added: More Support for PCR-1500/2500...
Aug 24,2006 - Added: Searching Tone for CTCSS & DTCS Tone Squelch...
Aug 26,2006 - Fixed: Saving SoundCard Settings.
Aug 26,2006 - Added: Select SoundCard Settings From Trunk Settings.
Aug 28,2006 - Fixed: Saving Group Watch Settings.
Aug 28,2006 - Fixed: Adding a New GroupID from TrunkID Editor.
Aug 31,2006 - Fixed: Entering a Frequency above 2ghz from keypad.
Sept 05,2006 - Added: Locking Out a channel during Scanning now Resumes Scanning.
Sept 13,2006 - Added: Follow Active Frequencies in BandScope. (Double-Click sets Watch Level)
Sept 19,2006 - Added: Duplex Offset Frequency for each Scan Bank.
Sept 21,2006 - Added: Duplex +/- Offset Buttons control frequency look-up.
Version 0.8.200 Released 09/22/2006

A new option in the BandScope will allow you to follow the active freqs according to the signal level. Double-click on either side bandscope when there is black area or the center bar. A Red line will appear indicating the watch level. This is turned on in the BandScope Menu...

MPT1327 Support is limited at this time... I'll need some input from users who have this system in their area to complete this trunking scheme...

Regards,
Jay

4527. p25 card for pcr1000

Yahoo group: PCR1000
Date: 2006-09-23 03:50:36 UTC
From: rhamil2000
Topic: 4527 Message: 4527

Has any progress been made adapting the p25 card for the pcr2500 to work in the pcr1000? Who has tried and failed? There is a lot of interest by the Mil band monitors on the nonencripted utility bands in southern Gulf Coast area.Sure wish we had during Katrina aftermath.

From: nt1g@comcast.net
Topic: 4527 Message: 4528

A disaster radio?
Look into the Icom R-20 or the AOR-8200. They both have the display 'built-in'. Along with the 'batteries'. And a functional antenna. Then go to a marine store and get a 'waterproof' bag, to keep it dry.
A PCR-1000, with a 'cobbled display', hooked up to a 12 Volt battery, along with some 'external antenna', and a GOOD RAIN STORM, sounds like a disaster right there...
Skip
Also, a cheap set of folding earphones, similar to what the airlines issue, will be a great relief if you have to listen for an extended time.

4536. PCR Remote - version 0.6.30 Beta is Now Available

Yahoo group: PCR1000
Date: 2006-10-04 01:47:44 UTC
From: Jay
Topic: 4536 Message: 4536

PCR Remote - version 0.6.30 Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100, PCR-1000, PCR-1500 and PCR-2500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or Windows Media Encoder will enable you to hear your radio from a remote location over the internet...

Updates:
Aug 07,2006 - Fixed: BandScope Display.
Aug 20,2006 - Added: 10 Selectable Banks.
Sept 05,2006 - -----: Increased Channels to 150 Per Bank.
Oct 03,2006 - -----: Removed PCR Selection, Now Automatic.
Oct 03,2006 - -----: Changed 3 Khz Filter to 2.8 Khz (Actual Filter).
Version 0.6.030 Released 10/03/2006

Regards,
Jay

4539. TrunkPCR update 0.81.203 Now Available

Yahoo group: PCR1000
Date: 2006-10-16 11:24:23 UTC
From: Jay
Topic: 4539 Message: 4539

TrunkPCR update 0.81.203 Now Available for Downloading from the homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

Oct 06,2006 - Fixed: Hunt on Data Loss using PCR-2500 in Dual Rcvr Mode.
Oct 06,2006 - -----: Recovery Rate info now shown in Dual Rcvr when
selected (PCR-2500 Only).
Oct 06,2006 - -----: Changed how Frequency is Set when on Voice Channel
(PCR-2500 Only).
Oct 06,2006 - -----: Dual Rcvr now remembers Last Channel used (PCR-2500
Only).
Oct 07,2006 - Fixed: If Mode on Channel was saved as P25, was defaulting
to WFM when loaded.
Oct 10,2006 - Fixed: Changed Weather Alert Frequencies for PCR-1500/2500.
Oct 14,2006 - Fixed: Editing Group ID Descriptions in Trunk ID Editor
(Again...).
Oct 15,2006 - Added: TRAIN Canceller Editor for PCR-1500/2500.
Oct 16,2006 - Added: DV and P25 Mode Selection in Search Limit Editor for
PCR-2500.
Version 0.81.203 Released 10/16/2006

Regards,
Jay

I've noticed on forums that when something comes up
for sale and someone picks up on something to
criticise, a spate of nastiness like a feeding frenzy
can begin.

Not very healthy, is it?

Fred.

I agree with Fred, the very first email I got of the user group was so filled with foul language and vituperation against a software writer who was trying to earn a crust that I almost abandoned the group in disgust Fortunatley I did not act immediatley becouse the webmaster informed the group , within the hour,said member had been given the bums rush becouse his remarks were not acceptable.The member who posted the info was trying to be helful for goodness sake. If people are prepared to look around eBay they will come across amazing PCR1000 bargains ie the guy who put up a PCR1000 plus a Toshiba laptop to run it. He put it in entirley the wrong section, without a reserve and got the princley sum of £145 for the entire package. I was delighted buy my PCR for £190, a few days later someone won one complete with DSP and a huge amount of commercial software for £205. If people care to tap my callsign into eHam.net they will see why I am not easily impressed. A little tolerance please fellow members

Subject: Re: [PCR1000] Re: Very special unit for sale on eBay !

I've noticed on forums that when something comes up
for sale and someone picks up on something to
criticise, a spate of nastiness like a feeding frenzy
can begin.

Not very healthy, is it?

Fred.

What ever happened to: "The customer is always
correct?" or "He's just asking a SIMPLE question?"
Besides, I don't think the disclaimer, "As-Is" is viable
if the buyer DOESN'T have an opportunity to see it
before the transaction place. If you describe it as
working, or perfect, or virtually new, but the buyer
finds otherwise, As-Is refers to a working or perfect
or V.N. unit, which the seller HAS to provide.
I AUDIT circuit boards for a Logistics Group (you spend
$6K on a board repair and the board still fails the same
test upon return, I get the board and I test it and oversee
repair.) I've learned if I ask about particular board's status,
the fancier the answer ("I just replaced a memory chip and
64 bit multiplier/divider") the longer it's going to take to get out.
The good boards have SHORT answers.

Hi Skip.

Yes - It's a predatory scene where both customers and
sellers are vulnerable and fraud feeds upon trust.
That aside, the average seller surely can do no more
than describe the item - as fairly as they know how.
A less than "ideal" description shouldn't attract
aggressive comment.

Is it not preferable for both sides to show good
intent and make best effort to complete the bargain?
That includes questions and answers exchanged before
bidding ends.
Like in driving, "If in doubt, hold back".

Regarding your $6k board repairs, I've found that
better answers aid fault finding but the worst range
from a blunt "doesn't work" to a fairy tail of
abandoned bungling.

Regards,

Fred.

The "customer is always right", but you are not right nor a customer either...

You are definitely not used to the way used electronic is sold on eBay.
used electronic is "always" sold as-is, it's up to the buyer taking it or leaving it,
that's why the seller profile is a good tool in these cases...
Why before you cast your aggressive questions don't you read my eBay profile
with more than 200 feedbacks (100% positive)? that might help you...

If you are shopping for a good PCR1000 you should consider my unit, if not, please ....

4556. Re: [PCR1000] Re: Very special unit for sale on eBay !

Yahoo group: PCR1000
Date: 2006-11-05 16:06:26 UTC
From: drpepper
Topic: 4541 Message: 4556

That's why I always state "AS-IS, AND AS DESCRIBED"
The customer is very seldom "always right", but the above words protect the seller, and also protect the buyer. If it is not "as described" then the deal is off, and the buyer is protected, ALSO, the seller is protected if it is not "as described"
DOA should always be protected, too.
ALSO,. , , 100% feedback doesn't really mean much.
Negative feedback given to someone for any reason is usually shot back to the giver, even if unjustified.
All 100% means is that YOU have not GIVEN anyone any negative feedback.

Remember, there are a lot of devious, mean spirited people out there in the world.

Doc.

From: masottaus
Topic: 4541 Message: 4557

1) Item misrepresentation is an implicit concept contemplated in
every single transaction clearly defined by eBay rules.
2) You are wrong; I have given negative feedbacks and I still have a
100% positive feedback.
3) this one was my last input on this thread; all of you guys have
too much free time...

Sincerely
Patrick

WENDY, , , , , ,

This is an international forum for discussion about the iCOM PCR-1000
radio and related subjects.
I find your post not only offensive, but also stupid.
Do you think that YOUR voting precinct is the only one in the world?
Are YOU the only person in the world?:
stupid person, , , , , ,

As an incredibly boring oldster who tried to inject just a tiny SWL element into what just used to be a very very interesting forum for the PCR 1000 ie I benifited from much more than one piece of advice that led led to greatly increased enjoyment, I find that a tiny cotery "yuk yuk " etc have captured the group. If no one else out there agrees and the group is a meeting point for tiny minds debating entirley unrelated topics please let let me know and I will unscribe immediatley. On departing I will thank endless people who have posted a number of sites that have pointed me to both excellent, cash saving software. If indeed "thats life in the fast lane "and "vote for for someone in whatever block it is" is the future of this group. then god help the fuiture of a group I was pleased to belong to.
Please fellow PCR -1000enthustiatsts fight back

Whether Elliot Spitzer on Row C is some inmate or
petty politician hardly matters but she's probably
turned more interest against him than for.

Sense prevails when one can ignore transients with a
quick tap of the delete key. Let the moderator
routinely deal with her like.

Fred.

Hi
I was wondering if there is any software that will record the sound on the PCR 1000 and also record the time and freq. tuned into a file .I am using "scanrecord " at the moment and it works very well but I would like a prog. that would record the frequency as well
Regards
Chris

Chris:

If you don't mind using two programs & correlating their data to get what you're after, my PcrMC program will control the PCR-1000 (as a scanner, for instance . . . I can't tell exactly how you are using the receiver from your original post, so that's just my guess as to your specific application . . .). PcrMC has a "debug" mode that, when turned on, will record in a debug log all commands going to the receiver and all status coming back from the receiver, with each entry time-stamped from the PC's clock. Combining PcrMC with ScanRec and using the timestamps in both, you can then correlate sound with frequency, etc.

If you (and/or anyone else for that matter) are interested, just send me an e-mail off-list & I'll be happy to send you the ZIP file (our files section for this Yahoo group is so full, there is no room to upload even the very small ZIP file) containing the executables & several "program" files that show how to make use of the scanning features, etc. Again, PcrMC was originally written to run under DOS, but it also works very reliably within a DOS window on Win95, Win98, WinME, Win2K, & WinXP, with no special "software gymnastics" required !!

Charles,

If you join the Talk PCR user group, you can find it in the files
section. Or you can download it from here - this was th
e latest version put together by Pete Mahy - he wrote it - however it
may have a nag screen

http://www.qrosoft.co.uk/tpv20/tpv2_99d.exe
Hopes this hepls

4568. Talk PCR Progam

Yahoo group: PCR1000
Date: 2006-11-08 22:54:03 UTC
From: CHARLES YOUNG
Topic: 4568 Message: 4568

Bill I tried your url that you sent to me
It took me to somer where else.
Betwen Google and all Yhaoo Groups that talk about IC 1000
they all sent me to a dead end
I do belong to this group and a few more

4593. Re: Taming PCR1500

Yahoo group: PCR1000
Date: 2006-11-20 19:50:41 UTC
From: Robert Sillett
Topic: 4578 Message: 4593

The PCR-1500 builds upon the command set for the PCR-1000. Although Icom has not published either command set, one can find reversed engineered command sets for the PCR-1000 on the Internet. I do not believe that a reverse engineered command set for the new functionality in the PCR-1500 has been published yet.

A slight, but significant, difference between the 1000 and 1500 is that while the 1000 starts at 9600 bps and then is kicked-up to 38,400 bps, the 1500 starts at 38,400 bps. So a traditional PCR-1000 program doesn't work with the 1500 because it's at the wrong baud rate.

Bob

4599. Error with TalkPCR registrations

Yahoo group: PCR1000
Date: 2006-11-30 11:08:10 UTC
From: iuverian
Topic: 4599 Message: 4599

Hi everybody,
I'm experiencing some problems when I utilise the audio recording function in the talkPCR program.
In particular I can't listen to the files with the Talk PCR player as they have no indication of the start and end time but I can read only label 1 and label 2. I can hear the files utilising the windows media recorder but I loose some indication as frequency and time stamps.
I utilised a Pentium 4 computer with microsoft XP.
I tried with an old portable computer with Windows 98 and everything works fine.
Thank you for the answers

4600. TalkPCR and Griffin Powermate

Yahoo group: PCR1000
Date: 2006-11-30 15:53:47 UTC
From: Tod Sudmeier
Topic: 4600 Message: 4600

Hello,

A couple of quick things. After a hard drive crash I needed to reinstall TalkPCR. I am now getting the nag screen. Can someone point me to the version of TalkPCR without the nag screen. I looked in the files section here but did not see it. Also, has anyone gotten the Griffin Powermate to work with TalkPCR. Before the crash, all I could get the powermate to do was tune in one direction no matter which way I rotated the knob. Any help would be appreciated.

Thanks

Tod Sudmeier

4602. 10.7 MHz IF Mod?

Yahoo group: PCR1000
Date: 2006-12-01 20:34:38 UTC
From: Mike
Topic: 4602 Message: 4602

Hi folks!

Is there any 10.7MHz IF mod out there?
Best would be a manual to get the if with pictures.
I searched on google, but found nothing.

Mike

From: nt1g@comcast.net
Topic: 4602 Message: 4603

Sounds like a fun project...I know there's a service manual floating
around the internet. Sounds like a good job for a MAR-2 MMIC
buffer/amp. These are avail in a kit with a PC board, commonly
used to 'BUFFER' a CATV ("cableTV"... though CATV stands
for Community Antenna TV) cable signal. I think there's a 'kitster'
on Ebay USA who provides PLENTY of components (with a
couple MMICs) and circuitboard for around $10. I believe I got
my MAR-2 board from Ramsey (15 years ago...).
Good Luck!!!

Yahoo group: PCR1000
Date: 2006-12-02 21:14:41 UTC
From: Patrick Bigelbach
Topic: 4602 Message: 4605

Mike:

The 10.7Mhz IF mod is described on RadioReference's pcr1000 wiki
http://wiki.radioreference.com/index.php/PCR-1000 . The mod looks tough
since it is all surface mount

If you are looking to IF mod your PCR1000 because you want to attach
AOR's ARD25 P25 decoder, then I would suggest moding the ARD25 to accept
discriminator input. That is what I did and found it less difficult.

hi folks i am looking for opinons about this reciever i am thinking of
getting one as a second unit to myaor 8200 mainly to do ssb with but
also some vhf/uhf stuff with , see as i spend so much time with my
pc's it would make sense to stick it on to one of my other machines.
so would it be any good for ssb or would i be better of getting some
dedicated hardware?
all opinions and thoughts apreciated.
thanks

4607. Re: [PCR1000] intrested in getting pcr1000

Yahoo group: PCR1000
Date: 2006-12-04 02:16:41 UTC
From: Mark J Culross
Topic: 4606 Message: 4607

I have owned my first IC-PCR1000 for more than ten years. I liked the first one so much, I bought a 2nd one (used) about a year ago as a backup since, at that time, I heard that Icom had plans to discontinue production & sales of that unit. Prior to earning my amateur radio license about 4 years ago, I was an avid SW listener, mostly listening to amateur SSB & international AM broadcast stations.

In those years of listening, I had several ham friends, & whenever we were on a radio outing, my PCR1000 was typically the "hound dog" . . . I would "find" the stations & they would "work" them. It is a fabulous receiver, often able to hear more on a simple Radio Shack multi-band antenna than the other radios could hear on other "serious" antennas.

I would highly recommend the IC-PCR1000 as a computer-controlled receiver. However, I was definitely NOT impressed by the software that Icom supplied with the unit when I bought mine. It definitely did not do a good job of highlighting all of the capabilities that this receiver has. As I understand, the Bonita software is somewhat better, although I don't personally own a copy.

If you are interested, and if you specifically need a good DOS-based control program, I wrote a program that I call PcrMC. I made it so that the receiver could very easily be controlled as a general purpose receiver, as well as enabling it to act like a scanner, and anything else that you'd like to use it for. PcrMC is FREE !! It runs equally well under Windows as it does under DOS. I actually supply two versions: PcrMC.exe is the strictly text version (80 chars x 25 lines, will also run in a window under Windows) & PcrMC-SA is the DOS graphical version (640 pixels x 480 pixels, will only run full-screen under Windows), providing higher-resolution on the bandscope (with SA standing for sepctrum analyzer).

Either version can run in "demo mode" where you can exercise all of the capabilities, without the necessity to have an IC-PCR1000 attached and/or powered on. Just send me an e-mail at kd5rxt@... if you'd like a copy of the program & the associated "program" files that give examples of using PcrMC to control the receiver.

The PCR1000 is fine radio for VHF/UHF, but IMHO does a rather poor job on HF.
If you want a PC radio which does a good job on HF, I would suggest
the WR-G305e. I can vouch that it is absolutely superb on SSB:
http://www.winradio.com/home/g305e.htm

From: aormk18200
Topic: 4609 Message: 4609

everybody to there own but is there a general consensus that one is better than the other ?
does one perform better over a given frequency range than the other or is it down to software and how well it is laid out to make use of all the functions?
i am looking for civil/mill air and ship shore coverage does one of these out perform the other? i had an frg100 several yaers ago and reacll that was an excellant perfomer for what i wanted to listen to,if i could get one at the right price then i would, but i would like to get a computer controlled unit for conveniance sake as i seem to be spending more time here at my computers than i should or maybe i am looking for the wrong thing and there is anouther option open to me that i havnt seen yet.

many thanks

There is not just one "winradio", but many models, so this question
needs some clarification. The first winradio (WR-1000) RF performance sucked,
even though the software was always better than Icom's. Their next
models showed much improvement, and the WR-1550e was quite on par with
Icom PCR in terms of RF performance, but had heaps better software and support.

Recently I have bought both PCR-1500 and Winradio G305e, and found that
the differences between PCR-1000 and PCR-1500 are only marginal (the
frequency extension is just a cheap and basically useless gimmick) and
do not justify the "upgrade". The G305e is more advanced and performs
better. And of course the software is superb.

I have both Icom PCR2500 and Winradio G305i/PD. The Icom is a superior scanner. My G305 is a better SW receiver. Many more features for SWL on the Winradio. However, if you plan to scan, go Icom. Just my $.02

Hmmm... I am not so sure about Icom being such a superior scanner, here is why:

1. The PCR2500 is specified at 60 channels/second max. The G305 is also specified at 60 channels/second max (don't you just hate the "max" specs, why don't they specify "min" instead?). Icom's reality of "max" means 25 ch/s on my fast PC, where the Winradio easily does 50+ (using "Level" scan).

2. The G305 makes it possible to combine different squelch modes (total 5 modes) with continuous adjustment for each of them, which can be applied to scanning. There are numerous options as what to do when signal is found and many conditions for scan resume, etc., which are entirely absent on the Icom. (I am also finding the layout and philosophy of the Winradio scan control more logical but I agree that this is subjective.)

3. The Winradio is precisely calibrated. So I can set the Squelch level for scanning in absolute dBm, not like with the rather amateurish "S-unit" meter on the Icom. (I do agree this does not matter so much in practice, but in my view it shows the level of professional craftsmanship which went to the design.)

To be sure, I don't want to put down a nice receiver (which the Icom undoubtedly is, and I still like it!), but in my experience it is a slow and rather feature-poor scanner. That's why I prefer to use the Winradio these days.

In terms of SWL, I agree with you there. You surely can't use the Icom for DXing, but the Winradio has still rather impressive HF performance especially considering that it is advertized as VHF/UHF scanner. The Icom's front end is giving up with loads of intermod while the Winradio still holds.

Pat

Icom is a better scanner IMHO. I say that because, I have had much trouble scanning my local police on UHF using my G305. The problem, if using CTCSS tones, the Winradio take about 1 second to decode the tone when scanning most often missing a call. This is the same compliant and memory file I sent to Winradio, whom was able to replicate the same issue on two different computers in there labs. The latest release (version 1.66) is from their findings from my complaint. Problem is I still have that same issue. The only work around with this issue is not use CTCSS tone in the memory file. However, by doing that I get annoying signals form other users that use the same frequencies. That my friend is not what scanning is about.

In addition, when scanning the 200 - 300 MHz region, I get images from an 800 MHz trunking system that is 20 plus miles away! Speed is not every thing in scanning. If the radio takes one second to decode a squelch tone and does not stop when a signal is present, what good is it to have a 60 channel/second scanner?

All of the squelch modes are great if you are monitoring a channel or one frequency at a time. Do not, get me wrong, the G305 is a good receiver, just needs to be improved. My Icom 2500 hardware and software is a neat package and fit's my scanning needs well. Pat, do you own and use an Icom 2500?

Vince, you do need to combine CTCSS with Level to get the fastest possible speed.
The reason is that CTCSS takes time to decode which cannot be really shortened
unless it becomes unreliable (this is because some CTCSS frequencies are very close).
I don't think that any consumer scanner could distinguish (for example) between
77 Hz and 79.7 Hz CTCSS frequencies in 20 milliseconds (which would be just slightly more
than one period of the CTCSS signal). Usually it takes 10-20 periods - hence the delay.

I don't have Icom 2500. I have Icom 1000 and 1500. I understand that the RF and
scanning performance of the 2500 is the same as that of the 1500.

Pat

I do combine level (-90) with CTCSS tone. John at Winradio told me that it takes 1 second when using CTCSS tone to break the squelch. Now I did a comparison with the G305 and the 2500 both using the same antennae with a Stridsberg multicoupler and both radios having the same frequencies, the G305 would be silent and continue to scan while the 2500 breaking squelch and allowing me to hear the transmission. I could see the S-meter move on the G305, but no transmission was heard. When I stopped the CTCSS squelch on the G305, it keep par with the 2500.

Anyway, I have learned to enjoy my G305 in the SWL bands and some limited scan work. Pat question, you know what mode you use to decode weather fax with the Winradio Advance Fax Decoder? The manual does not indicate!

Regards

Vince48

Vince,

If the scanner doesn't stop then would suggest lowering the Squelch Level
setting. 90dBm actually might be a bit high if you are looking for weak signals.

Regarding the fax question, I presume you mean HF fax?
If so, the mode should be USB.

By the way, are you aware of this site
http://www.hffax.de ?
It has some good info about frequencies, etc.

Hope this helps.

From: Rob Moore
Topic: 4609 Message: 4618

Patrick,

I get much better results with both my G303E/PD and my G313E/180 when I
use CW mode to pick up HF Faxes rather than USB mode.

Rob

4619. pcr1000 or winradio?

Yahoo group: PCR1000
Date: 2006-12-13 22:00:30 UTC
From: aormk18200
Topic: 4619 Message: 4619

hi folks been looking around for a few weeks now regards to a new shortwave set and have now been offer a choice of two radios one is the icomr8500 and the other is the frg100 bothe excellant sets the icom is out of my pocket so it looks like it will be the frg1000 i am looking at it on friday and cant wait to get it home all i need now is some good software to run it and bobs your uncle so will let you all know how it goes many thanks for all replys to my first post

piers

4620. Bonito RC45, Win 98.

Yahoo group: PCR1000
Date: 2006-12-16 16:31:37 UTC
From: d_t_emerson
Topic: 4620 Message: 4620

I've been trying to install the Bonito RC45 on to a
Windows 98SE system, and just get this error message:

"The MSVCRT.DLL file is linked to missing export
NTDLL.DLL:RtlGetNtVersionNumbers."

Any suggestions from anyone? Thanks.

4621. Re: [PCR1000] Bonito RC45, Win 98.

Do a search on the net for the file and download it to windows/system.
Good luck,
Ed

4624. PCR Remote - version 0.65.32 Beta is Now Available

Yahoo group: PCR1000
Date: 2006-12-25 11:12:59 UTC
From: Jay
Topic: 4624 Message: 4624

PCR Remote - version 0.65.32 Beta is Now Available for downloading from the homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100, PCR-1000, PCR-1500 and PCR-2500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or Windows Media Encoder will enable you to hear your radio from a remote location over the internet...

This update has a few changes:
Dec 16,2006 - Fixed: Remote Users Volume is now Muted when set from Server.
Dec 17,2006 - Added: Shotcut keys to Menus.
Dec 18,2006 - Added: Chat function between Users and Server.
Dec 18,2006 - Added: Window Heights now adjusted depending on OS used.
Dec 18,2006 - Added: DSP Settings.
Dec 19,2006 - -----: Changed the Frequency Centering Indicator.
Dec 24,2006 - -----: DV & P25 Mode Buttons now display appropriate Tool Tip Text...
Version 0.65.032 Released 12/25/2006

Regards,
Jay

4625. TrunkPCR version 0.82.205 Now Available

Yahoo group: PCR1000
Date: 2006-12-25 15:13:23 UTC
From: Jay
Topic: 4625 Message: 4625

TrunkPCR version 0.82.205 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a few bugs, made a few changes for the PCR-1500/2500 and
added some New Features:

Oct 23,2006 - -----: Group Priority now updated in Main Display when
changed.
Oct 23,2006 - -----: Group Priority now updated in CC Activity Display
when changed.
Oct 25,2006 - Fixed: Some Moto Continuation Msgs on 800mhz were set as
UHF Calls.
Oct 25,2006 - Added: Show Users who are NOT allowed in System Activity
Display.
Oct 27,2006 - Fixed: Active Frequency of Moto Private Call now Displayed.
Oct 30,2006 - Fixed: The Height of All Windows now adjusted properly for
XP.
Nov 03,2006 - -----: Patches show more accurate info. Invalid data came
from Frame Errors.
(Radio ID's could have been mis-interpreted as Group
ID's)...
Nov 03,2006 - -----: Patches now Removed from list when "Delete Patch"
received in data stream.
Nov 04,2006 - Added: Find & Replace text for Groups/Radios in TrunkID
Editor.
Nov 10,2006 - Fixed: After removing ID's in Trunk ID Editor, then
clicking a Trunk Bank BUG!.
Nov 11,2006 - Added: Automatic P25 Mode selection for PCR-2500 in Trunk
Settings.
Nov 12,2006 - Fixed: Display of Frequency in CC Activity using Extended
Freq Plan.
Nov 14,2006 - Fixed: "Run time error 341" When Trunk Started in Scan Mode
BUG!.
Nov 14,2006 - Fixed: Displaying of Groups in Group Watch if CC Activity
Window was Closed then Re-Opened.
Nov 15,2006 - Added: Quick-Tune to an Active Call when The LCN or Freq is
Clicked in the CC Activity.
Nov 15,2006 - Added: Move a Group to a New Trunk Bank when the TB column
is Clicked in the CC Activity.
Nov 20,2006 - Added: Background Color Selection For List Displays in CC
Activity.
Nov 20,2006 - Added: Foreground Color Selection For Each Group and Radio
ID's in CC Activity and Main Display.
Nov 20,2006 - Added: Background Color Selection For Active Call in CC
Activity.

Nov 24,2006 - Fixed: Radio Count in Main Display when Radio(s) Removed in Trunk ID Editor.
Dec 04,2006 - Fixed: DV Mode for PCR-2500 now shown as "DV" instead of "UNK" in Main Display.
Dec 08,2006 - Added: "Shift Key" Combinations controls Scan/Trunk Function Buttons (w/Underscore Char) in Main Display.
Dec 11,2006 - Added: Font Selection For List Displays in CC Activity.
Dec 12,2006 - Added: Font Selection For Each Group and Radio ID's in Main Display.
Dec 13,2006 - Added: Same Font Selection For Group and Radio ID's in CC Activity.
Dec 15,2006 - Added: CC Activity window can now be ReSized.
Dec 15,2006 - Fixed: Display problem in CC Activity when Column Header Width in List Displays adjusted.
Dec 23,2006 - Added: Auto Mode Correction if a PCR doesn't support a certain Mode.
Dec 24,2006 - -----: D-Star Mode button now displays as "DV"
Dec 24,2006 - -----: DV & P25 Mode Buttons now display appropriate Tool Tip Text...
Dec 24,2006 - Fixed: Radio ID/Info updates while conversation continues on same channel. (Change in Radio ID)
Dec 24,2006 - Added: "See Who's Talking" (TM) Feature. With this NEW Idea you can see who's talking on a Group...

Version 0.82.205 Released 12/25/2006

Regards,
Jay

TrunkPCR version 0.82.205 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a few bugs, made a few changes for the PCR-1500/2500 and added some New Features:

Oct 23,2006 - -----: Group Priority now updated in Main Display when changed.
Oct 23,2006 - -----: Group Priority now updated in CC Activity Display when changed.
Oct 25,2006 - Fixed: Some Moto Continuation Msgs on 800mhz were set as UHF Calls.
Oct 25,2006 - Added: Show Users who are NOT allowed in System Activity Display.
Oct 27,2006 - Fixed: Active Frequency of Moto Private Call now Displayed.
Oct 30,2006 - Fixed: The Height of All Windows now adjusted properly for XP.
Nov 03,2006 - -----: Patches show more accurate info. Invalid data came from Frame Errors.
(Radio ID's could have been mis-interpreted as Group ID's)...
Nov 03,2006 - -----: Patches now Removed from list when "Delete Patch" received in data stream.
Nov 04,2006 - Added: Find & Replace text for Groups/Radios in TrunkID Editor.
Nov 10,2006 - Fixed: After removing ID's in Trunk ID Editor, then clicking a Trunk Bank BUG!.
Nov 11,2006 - Added: Automatic P25 Mode selection for PCR-2500 in Trunk Settings.
Nov 12,2006 - Fixed: Display of Frequency in CC Activity using Extended Freq Plan.
Nov 14,2006 - Fixed: "Run time error 341" When Trunk Started in Scan Mode BUG!.
Nov 14,2006 - Fixed: Displaying of Groups in Group Watch if CC Activity Window was Closed then Re-Opened.
Nov 15,2006 - Added: Quick-Tune to an Active Call when The LCN or Freq is Clicked in the CC Activity.

Nov 15,2006 - Added: Move a Group to a New Trunk Bank when the TB column is Clicked in the CC Activity.
Nov 20,2006 - Added: Background Color Selection For List Displays in CC Activity.
Nov 20,2006 - Added: Foreground Color Selection For Each Group and Radio ID's in CC Activity and Main Display.
Nov 20,2006 - Added: Background Color Selection For Active Call in CC Activity.
Nov 24,2006 - Fixed: Radio Count in Main Display when Radio(s) Removed in Trunk ID Editor.
Dec 04,2006 - Fixed: DV Mode for PCR-2500 now shown as "DV" instead of "UNK" in Main Display.
Dec 08,2006 - Added: "Shift Key" Combinations controls Scan/Trunk Function Buttons (w/Underscore Char) in Main Display.
Dec 11,2006 - Added: Font Selection For List Displays in CC Activity.
Dec 12,2006 - Added: Font Selection For Each Group and Radio ID's in Main Display.
Dec 13,2006 - Added: Same Font Selection For Group and Radio ID's in CC Activity.
Dec 15,2006 - Added: CC Activity window can now be ReSized.
Dec 15,2006 - Fixed: Display problem in CC Activity when Column Header Width in List Displays adjusted.
Dec 23,2006 - Added: Auto Mode Correction if a PCR doesn't support a certain Mode.
Dec 24,2006 - -----: D-Star Mode button now displays as "DV"
Dec 24,2006 - -----: DV & P25 Mode Buttons now display appropriate Tool Tip Text...
Dec 24,2006 - Fixed: Radio ID/Info updates while conversation continues on same channel. (Change in Radio ID)
Dec 24,2006 - Added: "See Who's Talking" (TM) Feature. With this NEW Idea you can see who's talking on a Group...

Version 0.82.205 Released 12/25/2006

Regards,
Jay

1. Go to trunk menu

2. Select a group ID

3. on the bottom of the tool bar you will see a :-)

4. Click :-)

5. Select a picture

6. Click accept

7. Quit TrunkPCR completely

8. Open TrunkPCR

New picture will be shown when that group ID is monitored.

Merry Christmas. Jay, GREAT Options, thanks a bunch!

Great ideas, but so far I can not get the picture thing to work properly,
when I get a pic it is usually of the monkey.
Anyone got any success with this, please post methods
Thanks!

I have done that, but I still seem to have to save the individual radios.
Awesome feature, I hope it can be made to work properly.

I can confirm this - I´ve the same problem here under Win98.

The last version of TrunkPcr that worked for me was Ver.06-69
of 2003 (!) - since then ALL updates didn´t work ... :-(
(either "runtime error 13" or "runtime error 6")

I just installed this on my laptop running XP and it will not let me change the com port. It defaults to com2 but yet it asked me to change it. I set it to com5 and it still tells me com2 is in use and willnot start.

Sadly, I am getting constant crashes in the program, never got them in the prior version.
I am trying to capture the actual MS error file so I can pass it along to Jay.

Well I just got this working on XP. I had to load an old version, 0.82.200 and set the com port set up, then just updated to the 205 version. I still have to get it scanning and will do that later.

Hi Chris,

For a temp fix, open Trunkpcr.ini in NotePad.
Under the [Settings] section change "CommPort=2" to "CommPort=5" (Without the quotes)...

You need a change after step #6...

7. Click the "Save" Button... After you click the Accept button on the Picture Chooser, you need to Save the updated Group or Radio Info. (Just as if you edited the description)...

8. Exiting TrunkPCR or clickin the Save Bank Menu will save your changes to the associated Bank File...

Regards,
Jay

----- Original Message -----
From: vince48

Yes, you are right. I discovered this when I re-opened TrunkPCR after shutting down.

From: PCR1000@yahoogroups.com [mailto:PCR1000@yahoogroups.com] On Behalf Of scosgt@...

I have done that, but I still seem to have to save the individual radios. Awesome feature, I hope it can be made to work properly.

In a message dated 12/25/2006 1:50:45 PM Eastern Standard Time, vince48@... writes:

1. Go to trunk menu

2. Select a group ID

3. on the bottom of the tool bar you will see a J

4. Click J

5. Select a picture

6. Click accept

7. Quit TrunkPCR completely

8. Open TrunkPCR

New picture will be shown when that group ID is monitored.

Merry Christmas. Jay, GREAT Options, thanks a bunch!

OK, I just renamed the new TrunkPCR.exe and TrunkPCR.dll files, and put back the previous version. Now that EDACS system works perfectly. Of course, the banks and ini files are the same, I did not make any changes to them.
So, I think something got changed in the code in the newer version. It no longer appears to decode EDACS properly. Sitting here I just heard a code 33 at JFK (aircraft emergency). Back up and running, no pictures (boo).

4641. Re: Bonito RC45, Win 98.

Thanks, Ed. I'm up and running with RC45 now. Your encouragement was
just what I needed.

It was very slightly more involved: because the incompatible version
of MSVCRT.DLL was on the Bonito CD in its install directory, and was
preventing me from installing RC45 at all, I ended up copying the
entire install directory from the CD on to the hard drive, then
overwriting the Bonito MSVCRT.DLL with a good copy of the file, and
finally installing RC45 from this hard drive directory. Even after
the install, I had to overwrite a copy of MSVCRT.DLL that ended up in
the \Program Files\Bonito RC45\ directory, as well as the
\Windows\System\ directory. I used a copy of MSVCRT.DLL I retrieved
from the Win98 install CD to overwrite the ones that the Bonito
software put onto my disk.

Thanks again.

Thanks, Glenn. That patch is for a later version of RC45 than I have.
I ended up restoring MSVCRT.DLL from my Win98 CD and overwriting the
Bonito versions.
I use TalkPCR as my main PCR1000 control program, but just thought
I'd give the Bonito software a try.

4643. Bonito RC45 & PSK31

Yahoo group: PCR1000
Date: 2006-12-29 00:10:05 UTC
From: d_t_emerson
Topic: 4643 Message: 4643

Has anyone succeeded in getting RadioCom 4.5 to decode PSK31 at all?
Even on essentially noiseless signals, I can't get RC45 to give ANY
copy, even gibberish. I'm very familiar with tuning in PSK31, and
usually decode it with Digipan, which gives error-free copy on signals
that RC45 doesn't seem to respond to at all.

Looking at the RC45 manual, there's only one sentence describing PSK,
which seems to have been added as an afterthought. I wonder if the
PSK mode really was implemented at all in RC45, although there are GUI
buttons that claim to invoke the mode.

RC45 seems to work not too badly in either RTTY or CW mode, but PSK
just doesn't seem to work at all, not even badly.

Maybe I'm not driving the program properly.
Are there any tricks I should know about?

Thanks,
73
Darrel Emerson.

4645. APTDecoder 1.0.3.73 Released

Yahoo group: PCR1000
Date: 2006-12-30 21:35:05 UTC
From: Patrik Tast
Topic: 4645 Message: 4645

Hi All,

APTDecoder version 1.0.3.73 released!

If you are interested in APTDecoder sign up at the APTDecoder forum for updates
http://www.ptast.com/apt/decoder/community/phpBB2/index.php

Due to spammers we have disabled the online forum registration.
To register, email aptdecoder@... and prefer a username. We will sign you up a.s.a.p.

==
Changes made since release 1.0.3.72:
==
1.0.3.73
Sat, 30 Dec 2006
- mode and filter settings for PCR tuners
- automatic time synchronization option to Settings dialog tab Custom
- remove antenna button to Settings dialog tab RIG
- made changelog to an external file (c:\aptdecoder\changelog.txt)
- added station name to the application title
Bugfix:
- the flat earth did not update if the ground station changed
Sun, 10 Dec 2006
- ICOM PCR1500 support, Settings dialog tab RIG

1.0.3.73b2
Sun, 19 Oct 2006
- upgraded to ImageMagick 6.3.0
- detailed info text while decoding
- added a next passlist to the log
- made the log more configurable

1.0.3.73b
Tue 3 Oct 2006
Bigfix:
- ICOM PCR1000 was muted when tuned automatically

Please note, I do not have an ICOM PCR receiver so I can not confirm
the changes, I leave that for you to report.

====================
How to Install
====================

If you have version <= 1.0.3.72xxx You need to uninstall and download/install the
big SetupAPTDecoder-1.0.3.73.exe (8.8 MB).

==========

Get the new APTDecoder http://www.ptast.com/apt/decoder/index.html#download
Previous releases by request aptdecoder@...

Happy new year 2007,
Patrik

4651. TrunkPCR update 0.82.207 Now Available

Yahoo group: PCR1000
Date: 2007-01-11 11:25:47 UTC
From: Jay
Topic: 4651 Message: 4651

TrunkPCR version 0.82.207 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update fixes a few bugs:

Dec 27,2006 - Fixed: User Picture now shown in [Edit Group ID] window.
Dec 27,2006 - -----: CC Activity Window now has a Full Screen option.
Dec 28,2006 - -----: Initial COM Port now set to #1.
Dec 28,2006 - -----: Disabled code that Set Thread Priority (Bug Check!).
Dec 29,2006 - Fixed: User Picture removed from display when de-activating
a TrunkBank.
Dec 29,2006 - -----: Moved System Details / Stats from CC Control to a
New List in System Info.
Dec 29,2006 - Added: Clicking on a TrunkBank in Affiliation List now
allows you to edit it.
Dec 29,2006 - Added: Define a Range of Group ID's as Astro Digital for
Auto P25 Decoding.
Dec 31,2006 - Added: Apply Groups Color, Font and User Picture to Radios
when Affiliated to Group or Call Made.
Dec 31,2006 - -----: Changed a bit of code to reduce "Type Mismatch"
errors when loading.
Jan 04,2006 - -----: Removed Auto P25 option since Digital Range now
used.
Jan 05,2007 - Added: Announcement of Emergency Messages.
Version 0.82.207 Released 01/11/2007

1) For PCR-2500 users with a P25 Card, Verify or change the Digital Group
ID Range in the Trunk Settings.
This will help set the propper mode (P25 or FM), used to listen to
Digital & Analog Calls...

Regards,
Jay

I find that every time I do a save bank (which is needed with the show me who is talking) the program locks up shortly thereafter, with the standard notify Microsoft following. This happens all the time on EDACS. Maybe it is a leftover from the splash screen before I registered?

Hey Bruce,

Thanks for the new info update... I'll look over the Edacs part that is saved and see if I can find something there...
Once TrunkPCR finds a valid key, it only changes the maximum allowable limits and turns off the nag screen pop-up. It shouldn't be a problem here, but thanks for helping...

Thanks again,
Jay

Jay

4676. PCR-100 test info

Yahoo group: PCR1000
Date: 2007-01-27 07:22:08 UTC
From: sir_rayfrank
Topic: 4676 Message: 4676

Hi, couldn't find a group dedicated to the 100 so i joined up here. Just ordered an 100 off ebay and need info on what to look for in the way of bug testing. I've got the Icom software and pdf file (printed) and also talkpcr. Don't have the receiver yet and cant check out the icom 100 software, no demo mode so been playing with talkpcr mostly to learn its functions. Looking for info on known issues and how to test for them when radio arrives.

Throw away the Icom software - as quick as you can ;-)

TalkPCR is great! That is want you want to use.

Just my 2 cents ......

Also TRUNKPCR is excellent. You need a discriminator tap, or a second radio with a tap. The PRO-92 is really easy to do a tap, and cheap

4679. ICOM IC-R2500 Receiver for Sale - Unblocked No Gaps

Yahoo group: PCR1000
Date: 2007-01-28 13:51:58 UTC
From: mbr46208
Topic: 4679 Message: 4679

For Sale:

R2500 unblocked FULL version (not the Japanese version)with the UT-106 installed. I am too active in amateur radio, and other projects to enjoy this fine receiver.

Like new, perfect condition. Includes all original manuals, cables, powersupply, box, packaging and software... firmware updated. $950 shipped and insured within the States from 29643.

I will also throw in a new, never installed Discone wideband antenna.

If interested, e-mail: mbr46208@...

From: Matthias
Topic: 4731 Message: 4731

Hi,

for those of you interested I posted an article about the latest toy in my radio shack: an ICOM PCR-1000 black box receiver.

As you can guess there were possibilities for improvements and I could not resist implementing them. Now it can also receive DRM (digital radio mondiale).

You can find the writeup on my homepage at www.dd1us.de

Have fun

Matthias

From: pencasptpt
Topic: 4736 Message: 4736

Hi group,

Did anyone tried the new TalkPCR 3.0 Beta?
The new .exe file was posted in "Files" section.
I tried for one hour with Windows Vista Premium even without
compatibility WinXP or 98 Mode and worked just fine 100%.
Thank you Pete I sincerely hope that everything is ok with you. Nobody
wrote a piece of software like you did for PCR-1000.
Many thanks.

Peterxrm,

I have a link for you, I hope this is what your looking for! The software is called ACARS, it decodes ACARS radio signals from your radio and blots the planes on a map for you. I have used it in the past and it works very well. I have no support for you with this software, I haven't
used it for sometime and sure it has been upgraded since. Good Luck and Happy Listening.

Best one I've found for WEFAX is SeaTTY - not freeware but shareware:-

www.dxsoft.com/en/products/seatty/

It can also be used to decode various other modes as well.

4790. Re: [PCR1000] Re: PCR1000 and Multimode reception and software.

Yahoo group: PCR1000
Date: 2007-04-08 14:56:18 UTC
From: Fred
Topic: 4784 Message: 4790

Thank you Andrew and my thanks also to Jo.

I suppose I am trying to find which software can do
most then pin down to best for modems and best for
sound cards.

I could have said I am in Scotland where weather
forecasts and actuals don't always agree. These
programs look worth trying to see if there's life in
those old modems yet.

It'll be fun finding out :-)

Regards,

Fred.

4794. PCR1000 waterfall

Yahoo group: PCR1000
Date: 2007-04-23 21:19:42 UTC
From: pe4804
Topic: 4794 Message: 4794

Hello group,

I would like to know if there is anyone knowing about software to make a waterfall plot with the pcr-1000. What I would like to have is to see is a waterfall from 10MHz - 15MHz. Not one scan but 50 scans or so in one picture. Is there any software that can do this?

Thanks,
Gert

MATLAB for Windows has a nice demo for its Data
Acquisition toolbox. Basically it generates a 3-D plot
of the spectral analysis of anything coming through
the sound card.

Of course you must add some code for making the
PCR-1000 to be continuouly scanning the 10-15MHz range
but that shouldn't be too complicated since the
PCR1000 programming interface is long known.

From: David Stewart
Topic: 4794 Message: 4796

Hi Gert
The short answer is no. Unfortumately the PCR1000 band scanning abilities is limited to about +- 400 kHz about its current frequency and its IF channel will not support anything wider. You can make it scan from say 10 to 15 MHz but it takes about 30 seconds if you have a reasonable step set in your software. I use Ham Radio Deluxe and it is great used for single band scans.
What you really need is one of the new Software defined radios like the SDR-14 or the SDR-IQ but they require a fast PC and are a bit more expensive than the PCR1000

Best of luck

Dave Stewart

4802. Old PCR1000 goes plop! - then nothing

Yahoo group: PCR1000
Date: 2007-05-04 17:43:11 UTC
From: g4efe
Topic: 4802 Message: 4802

Hi,

Iv'e just acquired a PCR1000 for free (so can't complain)! Have an old Tosh laptopo I'd like to run with it (W95). I've downloaded a prog called icomcontrol. When the software loads I get plop from the speaker (good?) and then, nothing (bad).

I'm using a 9 way cable I had lying around. Should this be null modem or straight through? If it was of the wrong type would the PC say no connection or somesuch.

Also, whatis the correct DC voltage required. I'm running it at 11V at the mo.

Any pointers very much appreciated.

Thanks - MArtin

From: scosgt@aol.com
Topic: 4802 Message: 4803

It is a straight thru. It is 12V tip +, probably need at least close to one amp.
You also have a switch inside to change between internal seaker and the speaker jack.
Download TalkPCR ot TrunkPCR they both work well.
And don't forget to turn the scanner on.

TrunkPCR version 0.85.221 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few Additions and fixes

Apr 17,2007 - Added: Column Widths in CC Activity Lists are now saved.
Apr 24,2007 - Added: CC Activity Window position now saved.
Apr 24,2007 - Added: User/Radio Messages now displayed in User Status
Tab.
Apr 25,2007 - Added: User/Radio Messages can now be edited by clicking on
"#" or "Description" item in List.
Apr 27,2007 - -----: Mode & I.F. Filter Buttons now usable while
trunking.
May 03,2007 - Added: Moto VHF/UHF Calls can now determine if they are
Astro or Analog.
May 05,2007 - -----: Font, Color & User Pic Applied to Radios from Group
Affiliation now Selectable in Group ID Edit.
May 06,2007 - Fixed: User Status File name now changed when renaming a
Bank Description.
May 06,2007 - Added: Pocket Beep test function for PCR-1500/2500 Radios.
May 19,2007 - Fixed: Saving Bank order when just using "Sort by Desc" in
Bank Organizer.
May 19,2007 - Fixed: Selecting propper Bank when the above is completed.
May 19,2007 - -----: Splash Screen will now close 2 seconds after program
is finished loading.
May 19,2007 - Added: You can now Set the Program Speed / CPU Usage.
May 20,2007 - -----: Made a small change in the decoder to catch when a
Group changes frequency earlier.
May 23,2007 - -----: Boolean values saved in TrunkPcr.ini and Bank files
now Read "True" or "False" for all Languages.

Version 0.85.221 Released 05/23/2007

Regards,
Jay

I'm using "TalkPCR 3.0 Beta?" with XP SP2 and a USB-to-Serial adapter.
It's working great. I'd also like to say thanks to Pete.

4817. Newbie - PCR1000 antenna input and usage

Yahoo group: PCR1000
Date: 2007-06-10 10:18:21 UTC
From: Siddhartha Jain
Topic: 4817 Message: 4817

Hi,

I am completely new to scanners so my apologies if the answers to my questions are very obvious. I recently bought a PCR1000 off ebay and am having trouble setting it up.

My current setup:
A radioshack FM Yagi antenna with a 300 to 75 ohm transformer, RG-6 cables feeding into a splitter. From the splitter, a RG-59 cable goes to a Yamaha TX-480 radio and the another goes to the PCR1000.

For the same frequency on FM, I get loud and clear sound on the Yamaha radio and nothing but lots of noise with very faint sound on the pcr1000.

So does using a 75-ohm input on the pcr1000 completely kill off the reception? If yes, what is the best way to get the signal from the antenna to pcr1000? I can't seem to find any 75 to 50 ohm transformers in Fry's or Radioshack.

Any pointers or help is appreciated.

Thanks,

- Siddhartha

From: Siddhartha Jain
Topic: 4817 Message: 4819

Thanks Martin!! That solved the problem although I can still hear some background noise.

What I am really interested in is listening on Channel 6 for spikes in signal strength caused by signals bouncing off a meteor trail from a distant TV station (no channel 6 station in my area). I started off with trying to make it work with FM (hence the Yamaha FM radio) but the FM range is completely jammed in my area.

For this application, is it essential to match the input and get a transformer for 75 to 50 ohm? And what mode on the scanner would be best for this application?

Thanks,

- Siddhartha

There is no new to transform the 75 ohm to 50 ohm, the difference is so small that the loss is minimal. A 75 ohm to 50 ohm transformator will probably create more loss.

To listen to TV audio you should select WFM.

Martin

Siddhartha Jain <siddhartha@...> skrev:

http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

The Server and Remote software allows you to control your Icom PCR-100, PCR-1000, PCR-1500 and PCR-2500 over the internet.
Using Audio Brodcast software such as SHOUTcast, Pirate Radio Broadcaster or Windows Media Encoder will enable you to hear your radio from a remote location over the internet...

This update only has a few changes:
May 12,2007 - -----: Changed I.F. Filter / Mode Buttons Font.
May 12,2007 - Added: ToolTips to Stereo and Frequency Error Indicators.
May 12,2007 - Added: ToolTips to DSP Buttons/Indicators.
May 12,2007 - Added: ToolTips to all Knob Controls.
May 12,2007 - Added: ToolTips in Chat Window and Tone Squelch Setting.
June 21,2007 - Added: ToolTips to Bank Buttons.
June 21,2007 - Fixed: ToolTips for AFC, AGC, ATT, DTMF, NB, TSQ & VSQ displays.
Version 0.65.033 Released 06/21/2007

Regards,
Jay

My PCR-1000 stays on for 18 seconds after pulling the
serial cable out, using qpcr1k.
Swap the serial cable.

4833. TrunkPCR version 0.86.223 Now Available

Yahoo group: PCR1000
Date: 2007-06-25 03:50:52 UTC
From: Jay
Topic: 4833 Message: 4833

TrunkPCR version 0.86.223 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few Additions and fixes:

May 31,2007 - Fixed: Tune-to-Group when "Hunt on Data Loss" is selected in Single Rcvr Mode.
May 31,2007 - Fixed: Tune-to-Group now selects propper Mode for Digital Groups for PCR-2500 w/P25 Card.
June 04,2007 - Added: Display of Known Frequencies during Conventional Searching.
June 05,2007 - -----: Scan Speed Knob now usable in a Trunking Bank when Searching in Conventional mode.
June 06,2007 - Added: Report of New Found Frequencies during Conventional Searching (After Clicking HOLD).
June 07,2007 - Added: "Select All" Button on Search Results Display.
June 10,2007 - Fixed: RR Import of Edacs Frequency Plan (caused Program to crash).
June 11,2007 - Added: Compare GroupIDs with RR Import.
June 12,2007 - Fixed: Saving User Status and Radio Message files for Current Bank only
June 16,2007 - Fixed: Color Display of Edacs Private and Data calls in CC Activity.
June 17,2007 - Added: Display of Rejected Users in CC Activity for Edacs.
June 18,2007 - Added: Display of User Status in CC Activity for Edacs.
June 18,2007 - Added: Display of Adjacent Sites in CC Activity for Edacs.
June 19,2007 - Added: MessageBox is displayed when Export to Excel has been completed.
June 20,2007 - -----: Increased size of Trunk ID Editor.
June 20,2007 - Added: DTMF functions for PCR-2500's Dual Receiver.
June 22,2007 - Fixed: Scan/Search starting when Editing Bank/Channel Descriptions.
June 24,2007 - -----: Selected COM Port is now closed after initial check if radio wasn't previously on.
June 24,2007 - Fixed: Changed ToolTips for Strero, WX Alert and Frequency Error indicators.

Version 0.86.223 Released 06/24/2007

Regards,
Jay

I just replaced the serial cable with no luck. When I use
the "power" icon within the software, the radio operates normally as
long as you're actively giving it commands (volume, changing modes,
frequency, etc...). As soon as you stop giving it commands and
start listening to any given frequency, the radio shuts down after
15 seconds. The radio will come back after cycling the
software "power" button.

It sounds like something is making the PCR not "see" the RTS and DTR
as connected, which will make the PCR-1000 turn off as you described.
Look on page 4 here for more information about what seems to be happening:
http://www.dd1us.de/Downloads/ICOM%20PCR-1000%20rev1v1.pdf

This is usually either a cable or a physical serial port issue.
Good luck.

Is the S meter working? Only because the program polls the S meter,
i.e. there's always a constant stream back and forth, even when you
aren't adjusting the controls. I'll also guess you've tried the free 'talkPCR'
as another test, thought you haven't mentioned a different program.

So far it's been tested on three different computers, two different serial cables, different operating systems, and multiple software programs. (Does the same thing every time)

I have tried talkPCR as well. (sorry I forgot to mention that) When it does "hiccup", the S-Meter and Band Scope "freeze" where they were when it quits. However the frequency, mode, ATT, etc... can be changed, but I just attributed that to the graphical interface "doing it's job". *shrug* :)

4840. Re: PCR1000 - Audio shuts off after 30 seconds...??

Yahoo group: PCR1000
Date: 2007-06-29 07:50:48 UTC
From: pbij2001
Topic: 3509 Message: 4840

Hello all,

If nothing else helps you might try shortening pin 7 and 8 of the
rs232 port of the PCR1000. This keeps the receiver on at all times
even if computer shuts down or is disconnected. I've done this trick
for using a palm that's shuts down (battery save) while the PCR1000
keeps running.

You can do this with a thin piece of copperwire in the RS232 connector
and then plug the RS232 back in to keep it in place.

pinout:

1 2 3 4 5

6 7 8 9
= =

regards,
Paul

4842. PCR100 Sale

Yahoo group: PCR1000
Date: 2007-07-02 01:56:42 UTC
From: old_lew
Topic: 4842 Message: 4842

I just picked up an excellent PCR100 for a good price off the web, guy I bought it from has 4 more. Packing was great and he does PayPal. If anyone is interested just email.
Lew.

4843. IP1kC bandplan changed!!

Yahoo group: PCR1000
Date: 2007-07-03 14:19:44 UTC
From: pbij2001
Topic: 4843 Message: 4843

Hi Group,

I managed to change the IP1kC internal bandplan/step-sizes and a few other things. Also added some bands in the bandplan specially for HF ham/utility.

If you have other bandplan wishes we could make a wishlist here to make a version that's better for everybody.

I optimized mine for local use here in W-Europe.

Rgrds,
Paul

Hi Jonis,

Pictures are not very exiting, what would YOU like to change in the bandplan/steps/modes?

I added an HF bandplan for marine/air/hambands and modded the VHF/UHF outline with 12,5kHz rasters and sometimes 6kHz for nfm (which is often better). If you change band up/down I chose to go to "center of activity" in a band. For example choosing 2m HAM jumps to 145.5MHz// Marine VHF jumps to 156.875MHz//MIL AIR jumps to 243MHz etc.etc
Besides that I changed "AFC" to VSC which is a perfect voice squelch for SSB and I deleted a few stepsizes that I never use (20Hz/500Hz/20kHz(not often used in Europe)and the 1/10MHz steps)
Anything is possible but my knowledge of C-programming is restricted.

I can try modding a version for you and mail it.

Or if more people in the group would like an edited version that's better suited to their country bandplan we could make a version 1.3 :-)

Grtz,Paul

Hi Jonis & others,

I posted "my" version of IP1kC in the files to the left.
Let me know what you think.

This version is usefull in W-Europe.
There are now 56 bands in the band up/down including several added HF
segments. Start freqs are frequencies of high activity but may not be
usefull for others.

Just to give an idea.

Grtz,
Pzul

4847. Mode-S/ADS-B & ACARS Decoding

Yahoo group: PCR1000
Date: 2007-07-07 12:32:18 UTC
From: stuckinthemud_org
Topic: 4847 Message: 4847

Several questions (first OT, but related!)

How widespread is ACARS and Mode-S ADS-B data from aircraft
(accepting that ACARS has been around for a lot longer than ADS-B!).

Does their use extend to light aircraft, or is it mainly commercial
that would be fitted with either system.

Is there any software available for decoding the Mode-S ADS-B on
1090MHz that could use the output from the PCR1000, or is this the
preserve of units such as the SBS-1 because of the transmission type?

I'm interested in basic information (height, heading and speed), so
would I be better just going the ACARS route, or are there enough
aircraft now using the newer system to make it worthwhile?

Thanks!

Jim

Hi Jim;

You might be able to use your PCR-1000 as a front end to a USRP. The
USRP connects to your computer through USB. You can find software in the
open source GNU Radio package.. Eric Cottrell has been making progress
in this area.

4869. PcrMC98.zip added to files section

Yahoo group: PCR1000
Date: 2007-08-01 12:11:04 UTC
From: Mark J Culross
Topic: 4869 Message: 4869

Now that Yahoo! has increased the amount of space in the files
area useable by groups, I have now successfully added a ZIPfile
entitled PcrMC98.zip (98 refers to the version of PcrMC, not
necessarily to any particular veriosn of Windows, etc.). The ZIP
contains the latest version of a program that I wrote a while ago
to allow me to FULLY control my PCR-1000 in many ways that
Icom's included software doesn't support.

The program is FREE, so please give it a try. If you like it, keep
on using it. If not, nothing spent, nothing lost !! The weakest part
is the lack of a HELP file. Instead, I put all of my work into the
program itself, and did my best to make it self-explanatory.

There are actually two executables included in this ZIPfile. The first,
PcrMC.exe is a DOS text-only version . . . it represents my original
program development. Much later in the development cycle, I
decided to implement the same capabilities in a DOS 640x480
graphical version as PcrMC-SA.exe. Both of these run very well
under multiple versions of Windows (Win95, Win98, WinME, Win2K,
WinXP . . . not yet tested in Vista) . . . PcrMC.exe will run either
full-screen or in a DOS window . . . PcrMC-SA.exe will only run
full-screen (Windows restriction).

The basic syntax to run the program is as follows:

pcrmc[-sa] [-com1 | 2 | 3 | 4] [-fast] [-debug] [filename]

Note that all command-line options are case-insensitive.

[-com1 | 2 | 3 | 4] : you can specify the COM port on the command-
line to override that which is recorded in the PCRMC.INI file.

[-fast] : this will skip the pause on the "HELP" screen as the program
is started up.

[-debug] : this will cause a PCRMC.DBG file to be created that will
contain time-stamped entries for each command sent to the PCR-1000
and each status returned from the PCR-1000. Note that when the
receiver is used as a scanner, this debug file can grow quite large in
time !! Be aware of the disk-space requirements by running this for
a long time.

[filename] : you can specify the "program" file that you'd like
PcrMC to initialize with upon startup (it is not necessary to also specify
the file extension as this is assumed to be .PGM). See some of the
included "program" files for examples of how to make use of the
powerful capabilities within the PCR-1000 that Icom's included

Windows program woefully ignores and/or hides from us !!

Good luck & let me know what you like/dislike. It's been quite awhile since I worked on it, but updates are not necessarily out of the question. I definitely still use it all of the time. Even though it works especially well on very old (DOS-only) PCs (since that is what it was originally developed for), it works equally well under Windows (see above).

A couple of notes that may prove very useful are as follows:

ALT-H shows a help screen (the closest thing there is to a HELP file !!)
ALT-A goes into "automatic" (demo) mode which will let you exercise all of the program features even without your PCR-1000 attached
ALT-P starts/stops "program" mode
ALT-S starts/stops "scan" mode
ALT-Q quit without saving configuration
ALT-X exit & save current configuration

Pressing any of the selection keys (for example, O for mode) will cause that field to blink, indicating the selection that can be controlled using the up/down and/or left/right arrow keys to change the selection. Press the ENTER key to complete the selection for that field.

Frequency information can be entered anytime that no other fields are already active (pressing F first is not absolutely necessary). When entering frequency information, you can also use the backspace key to make corrections. As well, you can use the ESCAPE key prior to hitting the ENTER key in order to discard any frequency changes made and return to the previous frequency setting.

Some keys take effect immediately (typically those that alternate between two settings) such as G for AGC on/off, B for NB on/off, etc. Some keys have multiple functions (but with related control) such as P for bandscope...pressing P once will let you select the bandscope speed...pressing P again while the bandscope selection is active will change the bandscope vertical resolution multiplier.

Feel free to e-mail me if you have any questions, comments, and/or suggestions for improvements.

Have fun !!

Mark J Culross, KD5RXT

4874. TrunkPCR version 0.87.225 Now Available

Yahoo group: PCR1000
Date: 2007-08-11 04:49:24 UTC
From: Jay
Topic: 4874 Message: 4874

TrunkPCR version 0.87.225 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few fixes, changes and additionss:

July 03,2007 - -----: PCR Type Selection Menu is back in use (Mainly for Debugging).
July 07,2007 - Fixed: RR Web Import - Comparing Group ID's when a different Bank is Selected.
July 10,2007 - Added: Importing CSV files from Optoelectronics Digital Scout.
July 13,2007 - Fixed: Sort by Frequency in Channel Organizer.
July 14,2007 - -----: 9600 Baud Selection now Disabled for Moto.
July 16,2007 - Fixed: Displaying Active Trunk Banks and resetting Last Active one.
July 17,2007 - -----: Removed Moto "Digital ID Range" selection. Some systems have multiple ranges.
July 17,2007 - -----: Group ID's now have a flag for Digital or Analog and saved in ".Tnk" file.
July 19,2007 - Fixed: Blocking Astro Calls.
July 28,2007 - Added: Radio Watch - Up to 8 different Radios' activity can now be monitored/logged.
Aug 04,2007 - Fixed: Volume, Squelch & I.F Shift values saved if only these were changed.
Aug 05,2007 - Fixed: Old Bug when Squelch Condition constantly changes, while monitoring the Control Channel.
Aug 05,2007 - Fixed: Direct Entry of Frequencies using keypad/keyboard when Freq Button Depressed.
Aug 05,2007 - -----: Removed SQ LED. Background of Squelch Label now changed to display Squelch Status.
Aug 05,2007 - Fixed: Using Up/Down keys on keyboard to change Frequency when Freq Button Depressed.
Aug 06,2007 - -----: When Freq Button is Depressed, you can now change Frequency by double-clicking Frequency Text.
Aug 06,2007 - -----: Loaded BandScopeSpan value now makes sure it's atleast 4 higher than the BandScopeStep value.
Aug 08,2007 - -----: Restructured Edacs code and removed un-needed code.
Aug 08,2007 - -----: Edacs now reports Alternate/Neighbor Sites.
Aug 09,2007 - Added: Diagnostic/Test Messages now shown in a separate display list in System Info.
Aug 10,2007 - -----: Added more error checking to Sound Recorder

Version 0.86.225 Released 08/10/2007

Regards,
Jay

TrunkPCR version 0.87.226 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has 1 fix and 1 addition:

Aug 11,2007 - Fixed: Propper selection of P25 for PCR2500 again :)
Aug 11,2007 - Added: Multi-Select to Group & Radio Lists in TrunkID
Editor.
Version 0.86.226 Released 08/11/2007

Regards,
Jay

OK, maybe it's me, but I don't see an iCall button anymore on my EDACS systems. Is it now automatic, or no more iCalls?

From: scosgt@aol.com
Topic: 4877 Message: 4877

I miss a lot of calls, the unit actually "hits" the transmission, then resumes right away while it is still active. I think I have this isolated to the scan/resume settings.
Here is the problem:
The left side of the scan/resume box is OK, the right side is greyed out. So I can not tell it to resume on EITHER signal loss OR delay. That appears to be the problem. How do I fix this? It is resuming on "signal loss" which is probably just a momentary miss that happens in this system.

Try changing the Dotting number to 260 or so... Or maybe higher?
The progam can be fooled if someone's voice produces a tone in the range of the dotting beep.

The Buttons will show a depressed state depending on the Resume Delay knob settings.
The Right side will be greyed out for trunking, but selectable in a Conventional Bank..

4881. Some info on the PCR-1000

Yahoo group: PCR1000
Date: 2007-08-19 15:53:44 UTC
From: whats it to you
Topic: 4881 Message: 4881

Hey people!

Can you guys tell me what cool software additions I can use with a PCR-1000

Can you guys also give me some audio recordings of the device....receiving 80M signals 40M signals 10M signals.
VHF signals, UHF signals.... civl air signals...
Plain radio station signals, AM radio station signals.

to be more specific...all sorts of signals.

4882. Some audio recording

From: whats it to you
Topic: 4882 Message: 4882

Hey peepz can anyone hand me some audio recordings from this device.
I'm interested in this device, but I would like to hear it's reception
on HF (1 - 30 MHz amateurs and such).
And also on UHF/VHF band.

So if you guys could hand me some audiofiles recorded from this
device, please do

"whats it to you" :

Sorry I don't have any audio recordings from the PCR-1000. However, for an example of the software available to control the PCR-1000, I would recommend that you go to the files section in this PCR1000 group & download PcrMC98.zip.

That file contains the latest version of the program that I wrote a while ago. It is FREE, so please give it a try. If you like it, keep on using it. If not, nothing spent, nothing lost !! The weakest part is the lack of a HELP file. Instead, I put all of my work into the program itself, and did my best to make it self-explanatory.

*** In your case, note particularly the explanation of the ALT-A command below. That command is important for you since you don't yet have a PCR-1000.

There are actually two executables included in this ZIPfile. The first, PcrMC.exe is a DOS text-only version . . . it represents my original program development. Much later in the development cycle, I decided to implement the same capabilities in a DOS 640x480 graphical version as PcrMC-SA.exe. Both of these run very well under multiple versions of Windows (Win95, Win98, WinME, Win2K, WinXP . . . not yet tested in Vista) . . . PcrMC.exe will run either full-screen or in a DOS window . . . PcrMC-SA.exe will only run full-screen (Windows restriction).

The basic syntax to run the program is as follows:

pcrmc[-sa] [-com1 | 2 | 3 | 4] [-fast] [-debug] [filename]

Note that all command-line options are not case-sensitive.

[-com1 | 2 | 3 | 4] : you can specify the COM port on the command-line to override that which is recorded in the PCRMC.INI file.

[-fast] : this will skip the pause on the "HELP" screen as the program is started up.

[-debug] : this will cause a PCRMC.DBG file to be created that will contain time-stamped entries for each command sent to the PCR-1000 and each status returned from the PCR-1000. Note that when the receiver is used as a scanner, this debug file can grow quite large in time !! Be aware of the disk-space requirements by running this for a long time.

[filename] : you can specify the "program" file that you'd like PcrMC to initialize with upon startup (it is not necessary to also specify the file extension as this is assumed to be .PGM). See some of the included "program" files for examples of how to make use of the powerful capabilities within the PCR-1000 that Icom's included Windows program woefully ignores and/or hides from us !!

Good luck & let me know what you like/dislike. It's been quite awhile since I worked on it, but updates are not necessarily out of the question. I definitely still use it all of the time. Even though it works especially well on very old (DOS-only) PCs (since that is what it was originally developed for), it works equally well under Windows (see above).

A couple of notes that may prove very useful are as follows:
ALT-H shows a help screen (the closest thing there is to a HELP file !!)
ALT-A goes into "automatic" (demo) mode which will let you exercise all of the program features even without your PCR-1000 attached
ALT-P starts/stops "program" mode
ALT-S starts/stops "scan" mode
ALT-Q quit without saving configuration
ALT-X exit & save current configuration

Pressing any of the selection keys (for example, O for mode) will cause that field to blink, indicating the selection that can be controlled using the up/down and/or left/right arrow keys to change the selection. Press the ENTER key to complete the selection for that field.

Frequency information can be entered anytime that no other fields are already active (pressing F first is not absolutely necessary). When entering frequency information, you can also use the backspace key to make corrections. As well, you can use the ESCAPE key prior to hitting the ENTER key in order to discard any frequency changes made and return to the previous frequency setting.

Some keys take effect immediately (typically those that alternate between two settings) such as G for AGC on/off, B for NB on/off, etc. Some keys have multiple functions (but with related control) such as P for bandscope...pressing P once will let you select the bandscope speed...pressing P again while the bandscope selection is active will change the bandscope vertical resolution multiplier.

Feel free to e-mail me if you have any questions, comments, and/or suggestions for improvements.

Have fun !!

Hi, it's Tony Linton.
I finally decided I'd had enough of junk mail, and installed a fantastic application that gets rid of it all.
Unfortunately, you are not yet in my trusted senders list!! The only way I'll get your emails is if you follow the steps outlined below:

Here's all you have to do:

1. Press Reply
2. In the body of the reply, type in my AntiSpam Passcode contained in the graphical attachment.
3. Press Send

When I receive this reply, I will know that it was really you that sent me the email and not a
computerized spammer. I will then be able to receive all your mail. This authentication will be
done only once.

Thank you & have a great day,
Tony Linton

From: Jay
Topic: 4891 Message: 4891

TrunkPCR version 0.87.229 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few fixes, changes and additions
Aug 15,2007 - -----: Replaced Timer routines in PCR Control with Timer
controls to test Freeze bug.
Aug 16,2007 - Fixed: Program crashing with PCR1500 and Moto Trunking.
Aug 16,2007 - Fixed: Moto VHF Call Grants.
Aug 17,2007 - -----: Removed RING Picture from COM Status.
Aug 17,2007 - Added: RxData Picture to display status of Received Data from
PCR when COM Status is Active.
Aug 19,2007 - -----: COM Status Menu disabled when Spectrum Sweep enabled.
Aug 19,2007 - Fixed: COM Status Menu set to Saved State when TrunkPcr
starts.
Aug 22,2007 - Fixed: Moto Status/Text Message Ack Responses.
Aug 22,2007 - -----: Selecting MPT1327 in Trunk Settings now Set as
Conventional (until MPT is fixed).
Version 0.86.229 Released 08/23/2007

I received information about obtaining the NOAA satellite images directly from the satellites, as well as lesson guides for such projects, and I would love to try this with my students. I am looking for equipment to do so, and don't know where to start. I have been told by many that the ICOM PCR's are by far the best option, however the price tag is a bit out of reach for a test project. I am trying to find out if anyone has any idea where to start looking for these scanners, preferably used, refurbished, or even real cheap broken ones that I can repair???

This seems to be only a little cheaper, and doesn,t seem to be
versatile enough to work with the geostationary systems. But I am not
as experienced as you most likely are.

I understand your position...but give me a few words.
When I went on my first 'yacht race' (in 1989), I went out and
purchased all kinds of gear(inflatable vest, and tether,boots,
jackets, etc.) everything except a KNIFE. I was going to use
my Vitronix 'Swiss Army Knife'. It's nice and shiny and flashy.
Has All kind of tools. A good decision, I thought..(back then).
NOW, I regard that as one of the POOREST decisions
I've ever made. The springs in the knife rusted and broke...
several of the blades no longer lock.
I kick myself for not getting the 'correct' knife. I've since then purchased
a couple of 'proper' knives, (for sailing) Kershaw and Myerchin
(a folding and non-folding), and would really recommend for sailors
to keep their ' army' knifes safe on land.
End of knife story.
The PCR-1000 is a GREAT general purpose radio. But when they
do that, they compromise with little things that the folks designing
a SINGLE band radio DO.
Visit the LINKS on the lower page and learn more of 'the ART' of
WX bird watching... perhaps talk with them directly.
Don't get DAZZLED by the hardware. Simpler is better, especially
when teaching.

Quick question folks... I'm giving my PCR1000 to my dad.

Whilst getting it together, I have found about 3 AC/DC orphaned
adpaters in the same box!

Can someone tell me which is the correct one.

MPW AC Adapter
Model: T48-12-1000D-3
o/p: 12V 1000mA

or

SIL AC Adapter. Class II Power Supply.
Model number: BD090050G
o/p DC9V 500mA

Paul:

I can't confirm the exact p/n for the supply that came with the PCR-1000 (I use a different supply that is a little "beefier" as I have it running some other peripheral equipment as well, but the PCR-1000 definitely requires 12VDC & the current at 1A sounds familiar). I would vote for the T48-12-1000D-3.

Maybe you will feel alone with std. But lots of girls also get herpes, hpv or other stds. They need love. Maybe casual, maybe lifetime.

The std personal site allows you to create your free anonymous ad and view other girls' profile. You can contact these girls via email, IM or webcam. Flirt and date them. Then...

Maybe you can try it, if you like this service. Here is the entry.

Hi,

My god but this is fun! I love hearing what's going on in town. I do have one problem that is my creation. While editing the trunk ID's I accidently left the 'description' field blank for one group ID and closed the window. Now when I reopen it and try to edit the field (it displays 'false'), it locks the program and it crash/closes. When the freq is active while trunking it just shows 'false' for the group and all is fine. Is there a way to re-edit the field without crashing?

Best,
Scott

PS By the way - as soon as I can afford it I'll donate again! This is a sweet program, nothing else does this as well, or even close!!!

From: peterlissenburg
Topic: 4921 Message: 4921

Hi Guys, just dusted off the PCR1000 and find that it works fine...
for about 15 seconds!
If I change freq or set it to scan, no problem, but once it is just
listening, 15 seconds or so after the last operation it quits. Just
powering down/up via software gets it going again no trouble. Really
think it's some sort of setting or something dumb I forgotten.
And ideas?
Many thanks.
Peter L.

Peter:

The controlling software asserts RTS to hold the receiver active. If you are using a USB-to-serial adapter that does not drive the handshake signals (that is a known fault/weakness of many of the USB-to-serial adapters !!), then the receiver wil shut off after 15 seconds of not detecting RTS active. Is it possible that the last time you used it, you either used it with a different computer and/or a different serial port ??

In case anyone is looking for a good, reliable USB-to-serial adapter, I've copied in some text below that I've sent out on several other Yahoo groups that might also be helpful in this case:

Here's a product that I personally own & highly recommend for anyone that does not have a native serial port: Parallax (a well-known hobby company supporting all kinds of uP development support products & peripherals) offers a USB-to-serial adapter that works fabulously (I use it specifically under WinXP, Win2K, WinME, & RedHat linux). It also has the unique feature that it supports handshake signals (DTR for sure), as well as being USB 2.0 compatible. It is available in two flavors:

1) adapter only (no cable) for $14.95, stock #28030
at <http://www.parallax.com/detail.asp?product_id=28030>

2) adapter plus 6 foot type A-to-mini B cable for $17.95, stock #28031
at <http://www.parallax.com/detail.asp?product_id=28031>

The drivers for these adapters are available for download from the Parallax website at <http://www.parallax.com/html_pages/downloads/software/ftdi_drivers.asp>

I use it for all kinds of things on both my desktop & my laptops (HP, Gateway, Compaq, & Dell) & have NEVER had any trouble with it in any way. It might appear more expensive than your average USB-to-serial adapter, but when you consider the number of messages on the Yahoo Groups regarding "I just bought the XXXX USB-to-serial adapter & I can't get it to work . . . HELP . . . ", this is a product that is well worth the price in quality & reliability !!

Disclaimer: I have no connection to Parallax, other than the fact that I have bought MANY of their products (read that as having sent LOTS of well spent $$$ to them !!), & have integrated many of the items that they sell (both uP's & peripherals) in a large number of my hobby projects, and that I am a happy & continuing customer of theirs.

Good luck with your particular problem . . .

Mark J Culross
author of the free PcrMC/PcrMC-SA pair of programs (look for PcrMC98.zip in the files section) & still a PCR1000 enthusiast . . .

4931. Signal strength format

Yahoo group: PCR1000
Date: 2007-10-24 09:42:18 UTC
From: g8gsq
Topic: 4931 Message: 4931

Hi guys.

I'm trying to make a simple portable controller to use a PCR1000 for signal strength monitoring. The notes I've found on the command strings etc. say that the signal strength is returned as between 00 and FF. Is this as two ASCII characters, or a single 8bit word?

For exampel, does strength 6A come out as "6" and "A" as two separate characters, or as 01101001?

Thanks

Steve

Hi,

>Single 8 bit word, with a value from 0 to 128.
That is wrong!

8 bits (one word) is in hex from 0x00 to 0xFF i.e. from 0 to 255
in decimal (128 dec is the midpoint value 0x80 hex)

Accordingly to the spec it runs from 0x00 to 0xFF (0 to 255)
so 0x6A would be in decimal 106.

To get the singal reading push command I2, in fast mode his is done
automatically.

Patrik

OK. Here's what I found after some playing around.

The outputs come as strings of individual ascii characters, and
there's other stuff as well.

Send in I1? to ask for a signal strength and assume the value is 6A

What comes out is <LF> "I" "1" "6" "A" <CR> <LF> or, in decimal,

10 73 49 54 65 13 10

GM4JJJ lists LD842? as being the same as I1? but on mine it's
different. On VHF FM, LD842? values start incrementing from around
-115dBm signal level whereas I1? values don't change until >-100dBm. I
think I1? values are related to the S meter indication whereas LD842?
is closer to the RSSI.

Steve

Date: 2007-11-24 20:10:02 UTC
From: Jay
Topic: 4969 Message: 4969

TrunkPCR version 0.88.234 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few fixes and 1 addition...
NOTE: Moto Type-I Support will be finished in the next major update.

Nov 23,2007 - Added: Squelch Monitor Button - Opens Squelch/Disables
Voice Squelch when depressed.
Nov 23,2007 - Fixed: Display of PCR2500 Menu when PCR Type is selected.
Nov 23,2007 - Fixed: Tune-To-Group in CC Activity. Broke after giving
this it's own CallBack.
Version 0.88.234 Released 11/24/2007

Regards,
Jay

4970. DVP encryption

Yahoo group: PCR1000
Date: 2007-11-25 01:26:11 UTC
From: hilifer2004
Topic: 4970 Message: 4970

Hi...Is It possible for the pcr-1000 to decode DVP encryption with software? thank's for any info.....

4972. Recieve very low.

Hi Derek, did you purchase it brand new or used? And by "quite deaf",
do mean that both the audio and the rf signal are weak? Or is the audio
OK but the RF strength weak?

Also, what are you using for an antenna? ie: type, location, height,
etc.

Steve

4974. Low receive!

Yahoo group: PCR1000
Date: 2007-11-30 22:12:35 UTC
From: mi0dwd
Topic: 4974 Message: 4974

Hi,

Thanks for the replies, I have improved the receive by restoring the EEPROM with PCR1000BUR programme. I think the EEPROM was corrupt and this was effecting the receive. Its maybe not just 100% yet but its not bad compared with the receive on my 780xlt.

Thanks again.

Derek

4976. pcr100 (not 1000) eeprom backups

Yahoo group: PCR1000
Date: 2007-12-06 23:47:51 UTC
From: richturn
Topic: 4976 Message: 4976

Hi from new Zealand, im new here.
Im wondering if someone could upload their OWN eeprom settings from their PCR100. Just so i can try to upload to mine. Ive found a couple of eeprom files, just wondering if anyone else can do the same.?? So i can try some different ones. I know i should have the alignment done correctly but im trying the "budget" way. Cheerz and Happy Xmas

4979. Trading my RX-320D for a Icom PCR-1000

Yahoo group: PCR1000
Date: 2007-12-09 17:29:21 UTC
From: corbintechboy
Topic: 4979 Message: 4979

Hello all,

I just wanted to let you know I have my RX320D up for trade for a pcr-1000. The 320 is a little shy of 6 months old. It's a great radio and does everything fine but the wife wants to get back into scanning. She gives me rules in how much space I can take up...lol, so the 320 has to go. I kinda figured maybe I could skip selling it and hunting and buying a 1000 if someone just wanted a 320. I will put it on ebay if need be.

You can let me know if interested at corbintechboy@....

Thanks for looking!

Tell her you can set the PCR1000 on top of the RX320 and you only lose an inch of space .... The PCR is pretty good for VHF and up but it's mediocre at best for HF, especially when compared against a RX320 (I have a RX320 and a PCR100) ....

JR

The PCR-1000 is VASTLY superior to the PCR-100.
There isn't TOO many radios I'd trade my PCR-1000 for.
(I sold my PCR-100 for $100 and still feel I got the BETTER end of the deal...)

4984. AR3000 and PCR1000 for sale (London UK)

Yahoo group: PCR1000
Date: 2007-12-13 15:14:47 UTC
From: Ste
Topic: 4984 Message: 4984

Hi,

I have the following for sale following my purchase of a PCR2500:

AOR AR-3000 reasonable condition. Volume knob could do with a squirt of switch cleaner. I'm looking for around ?175.

ICOM PCR1000 with serial lead etc. ?175

Offers welcome on either radio (or both!). Contact me by email, snafu@...

Thanks,

/Steve M1AAO

4986. EEProm Upload

Thanks for your response.
Ok. I bought this second hand from ebay. I knew it wasnt working but thought id take a chance and see if i could fix it. I am by nomeans an electronics whizz, more of a tractor mechanic but i like playing with stuff like this.
I think i have checked most of the voltages and they seem ok.
There has definately been a "meltdown" at those diodes and a hint of smoke. I have ordered some more diodes from Icom New Zealand.
I notice when i run the 2099 progam, in the control panel screen, bottom right hand side there are 5 boxes with voltage levels etc., The 2nd and 4th boxes are empty, no readings. is this correct?
I cant seem to recieve anything and the volume knob doesnt work, but i can hear sound out of the speaker if touch the PCB.
Do you think i may have something else blown up as well as those diodes?? If so,is there a common part that blows on all of them that i could check?? Is this known as "blowing the front end".
Thanks for your help.
Cheers Richard

The front end on the PCR 1000 is very weak but to blow the diodes means it might have been hit by lighting.
I have repaired a few of these but some times they are just plain gone and its time to get another one.

I bet you have a PLL unlock condition which will shut down the audio through discrete off command from the microprocessor to the digital audio volume chip.

Check pin 59 on the big microprocessor(or CP-5 test point) and see if you have 4.7Vdc(undesired) instead of zero volts(desired). If so the PLL IC-8 is signaling your Micro IC-21 that things there are in an Unlocked condition.

From: n4umj
Topic: 4987 Message: 5001

These MA77 diodes are known to fail and I have replaced them in other ICOM receivers as well. Usually the incoming voltage surge from lightning tends to hit the band selector diodes resulting in one segment of frequencies not working at all.

From my notes I have the "Known Good" MA77 diode voltages as follows:

0.7V Forward Biased
1.2V Reverse Biased

These were measured with my Fluke meter in Diode test mode out of cicuit of course.

My particular failed MA77 was measuring 17 ohms in both directions.

I too bought in on a few of those used PCR100's and have had great sucess in getting them up and running.

I was advised by ICOM that the alignment software EX2206 for the PCR100 is not available to the end users and is only available to the service centers so I am in the dark as to how to align my PCR100's. All alignment in this receiver must be accomplished using this alignment software.

There are significant differences in the PCR100 and PCR1000 alignment software and one would be at risk trying to use the PCR1000 alignment software as a substitute as I see it. BackPCR does seem to save whatever EEPROM settings that are in the PCR100 (or PCR100)so that is good insurance for those that want to do that before its too late!

But makes the PCR1000 extremely portable and free of computer QRM...

IP1KC on palm m100/m515 runs steady as can be.
No crashes at all here.

Scanning is slow = true, but not my main interest.

With a trick you can turn off the palm and keep the PCR1000 running.
With memopad on palm os you can make a huge frequency database "in your pocket" wih 99 channels in each memo. The top memo in memopad is the "active" one.

All in all a very versatile combination!!

Although I'm well aware of potential software licensing issues, it sure
would be nice if a copy of EX2206 escaped into the wilds....

Dave,

Both M100 and M515 are old fashioned serial.
I run them both through a nullmodem adapter.
Shortening pins 7/8 (the middle two from the row of 4) leaves the
PCR1000 running while the palm is off. You can even disconnect and
take your palm for other things while the pcr1000 remains standby (on
1 frequency)

Serial palms btw are extremely cheap!
I've tested a few and somehow the M100 and M515 seem to operate the
PCR1000 the fastest. Processor speed doesn't seem too important, palm
os version and serialdata handling seem to define the speed.

Palm M100 is dead cheap (2nd hand $15) and works great. Also runs for
ages on standard AAA batteries which is handy "in the field".

I love the combi PCR1000/M100. It's my bedside receiver with the
illuminated and touch sensitive M100 as remote controller.Just great.

73'
Paul

5010. AFC

Yahoo group: PCR1000
Date: 2007-12-19 21:33:02 UTC
From: frv06560
Topic: 5010 Message: 5010

Hi,

I am writing yet another PC control program for the PCR1000.
I have been trying to figure out how the AFC actually works. If I am in FM or WFM mode and I switch the AFC function on, my serial port scanner does not detect anything, in other words the ICOM control software does not send anything to the radio. All the info i have on the PCR1000 protocol does not say anything about the AFC function. Intereseting, isn't it?

Can anybody shine some light on this?

Cheers

FV

"Check pin 59 on the big microprocessor(or CP-5 test point) and see if
you have 4.7Vdc(undesired) instead of zero volts(desired). If so the
PLL IC-8 is signaling your Micro IC-21 that things there are in an
Unlocked condition."

Hi, it seems that you are correct. i replaced those diodes but its
still the same. I do have 4.84v at CP5.
Have you any suggestions as to what i may do next??
Also i notice that when using TalkPCR the IF shift knob is greyed out,
is this normal?? Thanks in advance for any help. Merry Xmas
Cheers Rich

Hey Frans,

Actually, the info is there.
It all depends how you respopnd to the "Frequency Centering" codes...

The AFC Function is what you make of it :-)

Hi Rich,

Replacing the PLL IC-8 fixed mine.

I have seen PLL failures in other ICOM receivers and the normal indication of that is a flashing display of the operating frequency or dots.

Appears the firmware designers decided to leave this out on the PCR100 and just plain and simple shut down all audio out leaving the user unaware of any specific fault other than a dead unit...Thanks...

IF shift greyed out on the PCRTalk proabably means this feature is not included on the PCR100. I am using IC-PCR100 Ver 1.1 software and it has no IF shift feature.

I could find no other source for the PLL chip other than ICOM America and I must give them credit for still supporting these older receivers.

By the way a slip of the testprobe at CP5 to ground will briefly give you audio out and then maybe you can evaluate what's happening with the receiver. This fools the CPU into thinking the PLL is working. Mine had some signals but lots of swishing and oscillations. The spectrum scope will probably still work for you.

Good Luck on the repair!
Ed

Hi Dave,

Palm Zire 31 will not be the easiest way to go, I'm afraid...
You need to convert to serial, then null modem, then keep the pcr on while palm/or USB converter goes to sleep. A lot of weak links and difficult to detect comm-problems.

A serial palm is pushing out the right data right away but may be less fancy (but cheap)
Big screen: Palm III XE (monchrome) Color: Palm M515. Both run perfectly.

If you back up using Icom's EX-2099 it is also wise to manually wright down "your" specific PCR data. I've noticed data go wrong in the eeprom even using back up programs...
Wrighting down is tedious but gives you a future guarantee of re-installing your PCR data by hand.

73!

If there is no signal on the RF metering AD converter in the microprocessor then you get an automatic mute .... I have a PCR100 that looks to have a bad AD converter so I get an output mute but if I bypass the volume IC I get an output through all the demodulators, it tunes just fine, the AGC and analog portion of the meter circuit works clear up to the micro but I get no signal levels (Stereo light works on the FM BCB though since it uses a seperate input) so scanning doesn't work ... luckily the guy who sold it to me on eBay gave me a full refund including shipping and told me to just keep it but it's not worth going to the trouble of getting and installing a new micro if it's even available

Soon it's going to be a computer controlled wide range RF generator for my lab once a figure out a convenient way to convert displayed frequency to the actual VCO frequency ... I bought it mainly for weather sat reception so I'll probably grab the ceramic filters and homebrew on myself

Mine had the PLL UNLOCK from IC-8 and therefore no CLK or DATA were allowed to be sent from the CPU IC-21 to the AUDIO Volume control chip (which is digitally controlled) IC-23. I first thought the IC-23 chip was bad but the scope revealed no DATA pulses to it compared to a working one.

What got me started on this was the Bandscope was showing signals just fine but no audio or S-meter were present.

PIN 59 on the CPU IC-21 is another place you can check for the PLL unlock(actually called LCT)and a voltage there is bad news.

> ... luckily the guy who sold it to me on eBay.....

That may have been the fellow that I bought a few PCR100's from. Seems that they have disappeared though for now but quite a few were going up for auction on ebay in the past year or so.

That project sound fun...!

I used my Realistic PRO-2004 Scanner and ICOM R75 for a while as signal sources before I got my Hewlett Packard Signal RF Generator.

Take care,
Ed

I'm pretty sure I checked there and everything was OK but I may be
thinking of the L1AD PLL lock input, and I assume I'm getting a lock
since the stereo IC locks (The stereo light works which was my clue
that the receive was OK and just muted) You can make it scan, it's
just never stops on a signal ... I suppose the PLL could be locking
but I'm not getting a lock signal to the micro ... Probably worth a
look, it shouldn't take long to check it

Unfortunately it's too late to get an antenna up now, I did build a
nice quadrafilar helix antenna but there is no way I'm going up on the
roof to mount it now, especially since we either get an icestorm or a
snowstorm every weekend for 5 straight weeks counting today

> I used my Realistic PRO-2004 Scanner and ICOM R75 for a while as

Most of my test gear is for HF ... I'm also toying with the idea of
using it as a LO in a converter for my 70MHz W7ZOI designed spectrum
analyzer to extend it's range

Topic: 5020 Message: 5020

Hello to the group. I have a PCR100 that I bought off the web, not ebay but that's where it came from before I bought it off of another ham. It scans but never locks on to a signal and also no sound what so ever. I can watch it scan and it just keeps on scanning even though I can use my base rig and listen to the stations like our local police or our local repeater and they aren't even slowing the pcr100 down. Any ideas? I have checked some of the CP's and I think I have the right voltage but I can't be sure as my eyes aren't as good as they once were. Any ideas at all would help. I have downloaded the manuals both op and service and they aren't any help. Thanks and God Bless
Rev. Carl

Where did you find a new version?

In the files area are the old 1.0 version and a new zip with the old 1.0 version but with added supporting visual basic files if you happen to miss those and you also need to run SETUP to unpack and install all files with that version, including the ex2099.exe

Both version works and both zip's download and unpack without any errors when I tried 10 minutes ago. Try using a different method to download or perhaps you have something running in the background hogging CPU resources.

Ubbe.

Hi Carl,

EX2206 is the alignment software for the PCR100 and EX2099 is the alignment software for the PCR1000. There are major hardware differences inbetween the two radios and the EEPROM setting is about like a fingerprint uniquely varying from radio to radio.

I am currently repairing several PCR100's and luckily not all of them require the use of the alignment software but some do and I currently have no source for the alignment software. I was advised by ICOM that it's for ICOM dealer/service usage only(which I am not).

As for your failure if it is one of those parts units off ebay it may have multiple component failures like some of mine did. I think this was due to the heavy commercial usage of these and the environment in which they were operated.

Once up and operating these PCR100's give the PCR1000 a good run for the money(except for the missing SSB of course).

Thanks for the info Ed, I knew that the software was different but I guessed that it would read the same as far as the pll was concerned. I am probably wrong on that. But it was worth a shot. So I guess I just have to bite the bullet and send it to Icom. I just hate to see the bill. Thanks again for the info. God Bless.

Topic: 5020 Message: 5027

Tonight I lifted one end of resistor R127 and mine came back up, I
have a signal on the meter now and scan seems to work just fine

The lock outputs on the PLL seem to work (I probed them with a scope)
but are weak and don't pull up to ~5V like they should but they aren't
low either as they would be in an unlocked condition (Note the
transistor is an inverter and changes unlocked=low to unlocked=high
for the micro)

Icom runs each lock output through a diode and then to the transistor,
while the data sheet reference diagram ties the outputs directly to
the transistor ... tomorrow night or this weekend I'm going to try
bypassing those diodes and hooking the resistor back up so the
built-in biasing resistors in the transistor can help pull the outputs
back to high

JR

That is sort of what I discovered when my Test probe inadvertently touched ground at the CP5 test point. But at that point there was lots of swishing and other noises present that should not have been there either.

> The lock outputs on the PLL seem to work (I probed them with a
> scope but are weak and don't pull up to ~5V like they should but

I repaired an R8500 with a bad PLL and they were summed as well by two diodes into a common point back to the Microproccesor. I think the R8500 used two seperate PLL chips on seperate PC boards. The PCR100 uses only one PLL but it is a dual unit chip.

On my bad PCR100 my scope only saw waveforms at IC8 Pin 3 and 18 and they were sort of half rounded or distorted at the tops. Freeze spray would increase the amplitude of them but not return it to a working state(worth a try anyway.)

Pin 3 on my bad unit had a 3.5 vac p-p signal present and Pin 18 had a 0.3 Vac p-p signal.

Replacing the Dual PLL IC-8 fixed mine and I did not research it anymore. Next time I get into repairing the remaining PCR100s here I think I will do some further probing into the waveforms at the PLL.

Good luck on that! Luckily I had a working PCR100 here and was able to do some quick A/B comparisons. I try not to repair anything this complicated without having a working spare close by to do comparisons to. The ICOM service manual leaves a bit to be desired in that area.

At first I tried using my PALM IIIc to operate the PCR100 with while on my workbench but eventually the Scope, Meter and other parts of the test bench ended up being relocated across the room beside my office computer!

By the way the UNIT which I encountered that I suspect had a corrupted EEPROM was showing some very odd values on the BACKPCR program data file. Lots of values with just 80 or 90 and no letter values (HEX) as would normally be seen in a good EEPROM read.

I orginally suspected the EEPROM in mine but it checked OK or at least close to what most normally see

Bypassing the diodes didn't work but it did make it easier to see which half of the PLL wasn't locking, in my case its the IF not the LO which explains why it seems to work perfectly went I lift the resistor which sends a lock signal to the micro ... I believe the PLL is actually locking, it's just the output LD is bad .... It's odd how mine worked for about a half an hour and then suddenly tweaked out on me

I'll probably replace the PLL chip if it's not too ourageously priced but for now at least it is usable .... Today I'm going to add the discriminator mod and see how trunking works .... I got this mainly for weather satellites but who knows when I'll be able to get my quadrafilar helix antenna up on the roof, I could put it on the ground out front but I suspect the trees will affect reception

Thanks for the input, the service literature barely mentions the PLL unlock input and it doesn't even show up on any of the block diagrams or in the theory of operation sections, I knew I was getting a signal as well as AGC action and signal meter levels back to the main micro so I suspected a bad AD input on the micro .... working on all those SMT devices isn't for the weak of heart and weak of mind but I've been doing SMT rework since the mid 90's when I worked for a Sony, Sharp and Nintendo authorized service center back when people actually fixed consumer devices instead of pitching them in the garbage and buying a new one

5031. PCR1000, Vista, and Serial/USB

Yahoo group: PCR1000

From: David Guretzki
Topic: 5031 Message: 5031

I'm wondering if anyone has had good success with running the PCR1000 on a Windows Vista system. I have a new Dell laptop with the Vista Home Premium system installed and want to run my PCR through it. (I still also have an older Compaq laptop that works fine, but am wondering if I can make the switch).

My questions are:
1) Does anyone have a recommendation for the proper USB/Serial adaptor in this case? (I've seen some suggestions in the archive, but notice they are all assuming 98 or XP).
2) Any tips for making sure the PCR will work on a Vista system?

Thanks for any help!

David

I've been running a PCR-100 under Vista with no issues but I'm using a standard serial port ... I do run a RX-320 under Vista using a USB to Serial adapter, I'd recommend a Keyspan, they seem to be the most trouble free ... Get a good USB adapter and I doubt you'll have any issues

Fact of the matter is I've had less of a problem with Serial and Parallel port devices under Vista than I did with XP .... as far as programs go, unless they say they are for Vista I run them in WinXP SP2 compatibility mode ... The only radio program I've had an issue with under Vista is WXtoImg which crashes even using the Vista Beta so I switched to a relatively new Open Source project called APTDecoder

5034. TrunkPCR version 0.88.236 Now Available

Yahoo group: PCR1000
Date: 2008-01-04 07:41:17 UTC
From: Jay
Topic: 5034 Message: 5034

TrunkPCR version 0.88.236 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few fixes...
NOTE: Moto Type-I Support will be finished in the next major update.

Dec 26,2007 - Fixed: Some Search Settings in Dual Receiver were using
saved settings from Main Receiver.
Dec 26,2007 - Added: Support for 2 Sound Cards. (1st for Decoding CC, 2nd
for Recording Conversations.
Dec 26,2007 - Fixed: Playing Back Recording on Propper Sound Card.
Dec 30,2007 - Fixed: PcrComm control, Signal Responses dumped after
EEprom was Read.
Jan 01,2008 - Fixed: Last Channel Used in a Bank after Saving Updates in
Channel Organizer.
Jan 02,2008 - Fixed: Another Registration Problem with Windows Vista.
Version 0.88.236 Released 01/03/2008

Regards,
Jay

5035. USB-Serial converter and VISTA

Yahoo group: PCR1000
Date: 2008-01-07 14:21:48 UTC
From: David Guretzki
Topic: 5035 Message: 5035

I thought I'd report to the group that I have had good success with a Cables Unlimited USB to Serial DB9 Converter (http://www.cablesunlimited.com/products/Prod_Individual3.aspx?groupcode=I3274) working on a laptop with Vista Home Premium edition. On my Dell laptop, at least, I needed to change to com4 in order to get the connection, but once that was set, I had no problem using a number of the programs I have for the PCR1000. The suggested retail price is $29.99, though I was lucky to get one for $26.28 (Canadian) at a local electronics supplier. The converter also comes with an extra length of USB cable and a small CD of drivers.

Disclaimer: I have no connections whatsoever with Cables Unlimited.

Well ain't that just fine and dandy .... Icom America doesn't have the
PLL chip in stock and don't know when or if they are getting more ...

Oh well after lifting the resistor the unit seems to be working just fine

5039. Serial RS232 cards for later computers:

Yahoo group: PCR1000
Date: 2008-01-12 03:59:08 UTC
From: Patricia (Elaine) Gibbons
Topic: 5039 Message: 5039

For all of the modern desktop PC's without real DB9 RS232 ports, there is a solution ..

I recently installed a card in my HP Mediacenter PC that gives me two
real
RS232 com ports.

It is made by Superlogics, and is a model "DSerial-PCI" and provides two DB9 , RS232 ports and the cost is about $40.00 ...

See: <http://tinyurl.com/2kj72h> http://tinyurl.com/2kj72h

<http://www.superlogics.com> http://www.superlogics.com

<http://www.superlogics.com/rs-232/port-expanders/dserial-pci/97-1454.htm>
http://www.superlogics.com/rs-232/port-expanders/dserial-pci/97-1454.htm

Note that the card is backward compatible with older operating systems, and the com port numbers can be reassigned ..

Hope this helps ..

Elaine

An easy fix I'am using right now running 2 scanners (PCR1K & BC996) at once is a usb2ser box.
This adds 4 serial ports wkg thru 1 USB port and is simple to install. Add a docking station and
your even better setup.

From: jpiscopo15
Topic: 5043 Message: 5043

Hi,

I have an ICOM PCR1000; unfortunately without the serial cable. I have made several cables using the ICOM's pin out information contained within these messages but all will not work. I am using a 9 pin serial port on a PC with Windows XP and using Talk PCR which worked perfectly when I had the original cable supplied with the receiver. Now I just get an error dialogue "TalkPCR 2.4F2 Com Error TalkPCR failed to receive a response from your radio". If anybody can give me the exact 9pin ☐ 9pin configuration (with any additional links to keep the receiver powered up) then I would be very grateful. Thanks.

5046. Decent buy on icom PCR-100's

Yahoo group: PCR1000

From: old_lew
Topic: 5046 Message: 5046

Dishman on ebay just listed a few for $110 shipped item number
200194917301
They have been hard to find as of late. These are service pulls and do
have a 7 day money back guarantee.
Not related, have no interest in seller just wanted to pass it on to
the group.
Lew.

From: n4umj
Topic: 5020 Message: 5048

Hi JR

ICOM did offer the NIS part to me but the price was
a bit unrealistic and I am not a dealer so that
even lower tier pricing was not applicable to me.

This is also an obsolete part on the electronics
parts market and is available in large quantity
orders mainly through parts brokerage houses
with minimum orders that are quite high.

Unfortunately MCM, Mouser, and NTE don't work
when researching inventory on this one.

Contact me if you are still interested in
repairing the PCR100 as I have some favorable
news.

Hi Loren,

I used an old Palm3C which was laying around here without any use.

Yes, the older palms feature a serial port. They did not yet have a USB port.

Yes, there is free software available.

You can find a description of my setup including the software on my homepage at www.dd1us.de
Please look in the folder Ham Downloads and scroll down to the file with the description
" <http://www.dd1us.de/Downloads/ICOM%20PCR-1000%20rev1v1.pdf> A new toy in the Radio Shack: the ICOM PCR-1000 wideband receiver (a review and tips for improvements incl. DRM)"

If you have further questions then please let me know.

Good luck

Matthias

Hi Loren,

I use a Garmin Ique 3600 GPS receiver that runs on Palm OS5, along
with
IP1kC written by JJ in Tokyo.
http://www.geocities.com/jjintokyo/

You can also use a hardware controller by giulianoi0cg,
on ebay http://myworld.ebay.com/highq_it/: look ast eBay Item number:
9704595338 for pics...

5059. S Meter value to input level

Yahoo group: PCR1000
Date: 2008-02-10 19:06:23 UTC
From: patrik_tast
Topic: 5059 Message: 5059

Hi All,

Do you know the function how to convert the S meter reading, 0 to 255 value, as a function of input signal level (dB)?

I'm using the PCR1k for receiving NOAA APT on the 137 MHz band using 50kHz Narrow FM.

Any help appreciated,
Patrik

5060. Re: S Meter value to input level

From: bagmouse7
Topic: 5059 Message: 5060

This was studied quite a bit when Pete was writing TalkPCR.
In the help file you will find a section tiled "Talk PCR dBm
Calibration."

Here is the text:

To provide a more meaningful signal reading, I have spent a lot of
time investigating the PCR1000 signal strength possibilities.

The result of this work is the Talk PCR, CaldBm function.

This mode reads the raw AGC line of the radio, this provides a means
of seeing signals that are just over the noise floor, to signals that
are up to □10dBm. To convert this data into a dBm value, TalkPCR
uses a two-dimensional look up table, and interpolates between the
calibration points, to produce a new dBm value. In fact there are
two tables, WBFM50.Cal and AM15.Cal, as the detection method is
different when in WBFM to other modes.

The PCR1000 has 8 distinct RF bands,

0-1.6MHz,
1.6-15MHz,
15-30MHz,
30-50MHz,
50-150MHz,
150-350MHz,
700-1300MHz.

Calibration points are taken at each band edge and several points in
between. Calibration levels are -120dBm to 0dBm in 5dB steps. The
calibration tables are plain text if you wish to view them.

The result of this calibration is that, on the calibrated radio, the
new dBm value is accurate in all modes to within 3dB over the whole
band from □115dBm to □20dBm. Other radios will not be as accurate,
as the calibration tables will not match.

Reports on how accurate this calibration works on your radio would be
appreciated.

TalkPCR Help Ver 2.4, QROSoft Ltd

You can look in the WBFM50.Cal and AM15.Cal files and see the mapping
of raw AGC values to dBm.
Good luck.

Just a minor typo in the help file.
If you look at the .cal files readings have been taken at 350, 442.3,
520.3, and 699.999999.

Topic: 5059 Message: 5064

Hi all,

Just a note how I'm using the S-Meter calibration coefficients from
TalkPCR 2.4F2 wbfm50.cal.

For frequency 137.100 MHz (NOAA 18) I interpolated coefficients
between 121.500000 and 149.999999 MHz. Now I got a new array of
coefficients for only 137.100 MHz.

'level,-120,-115,-110,-105,-100,-95,-90,-85,-80,-75,-70,-65,-60,-55,-50,-45,-40,-35,-30,-25,-20,-15,-10,-5,0
137.100,0,42.094737,51.094737,60.094737,69.094737,78.094737,87.094737,96.094737,105.094737,114.094737,123.547368,132.547368,142.547368,151.452632,
159.452632,166.905263,174.357895,181.357895,188.810526,196.263158,203.263158,210.715789,218.168421,226.621052,231.905263

After that I interpolated the reading (I1?) to dBm eg value 60 -> -105
dBm (+ decimals)

Patrik

Hello,

I don't seem to see any change when I turn on and off my AGC using AM and receiving aircraft. Does it work in all modes? How do I check to see it is working? At what signal level does it start to cut back on the signal? Should I see a difference on the S-Meter?

Loren WA7SKT

5070. Invitation to join Radio Communications themed Yahoo Group

Yahoo group: PCR1000
Date: 2008-02-22 04:06:22 UTC
From: Dave
Topic: 5070 Message: 5070

Hello,

Members of this Yahoo Group, you are invited to check out and join these groups:

PCR2500 Yahoo Group
http://groups.yahoo.com/group/pcr2500/
The PCR2500 Yahoo Group is your place to discuss and trade information about the new iCOM IC-R2500 and IC-PCR2500 dualwatch, digital mode, diversity, computer controlled or stand-alone scanning receiver (with optional APCO P25 and DStar digital decode).

PCR1500 Yahoo Group
http://groups.yahoo.com/group/pcr1500/
The PCR1500 Yahoo Group is your place to discuss and trade information about the iCOM IC-R1500 and IC-PCR1500 computer controlled scanning receiver.

Radio Gear Yahoo Group (radiogear)
http://groups.yahoo.com/group/radiogear/
The Radio Gear Yahoo Group is your place to discuss radio communications gear, accessories, and other radio communications equipment. Some items of discussion may be antennas, software, meters, audio attachments, microphones, speakers, headsets, modules, filters, GPS, etc. This includes gear for ham radio, scanners, receivers, GMRS/FRS, business radio, marine radio, aircraft radio (AM), etc.

Thank you for your continued support of this Yahoo Group and thank you for checking out the above Yahoo Groups.

PCR2500/PCR1500/RadioGear Group Moderator

5073. PCR Remote version 0.66.035 Now Available

Yahoo group: PCR1000
Date: 2008-02-25 13:24:37 UTC
From: Jay
Topic: 5073 Message: 5073

PCR Remote version 0.66.035 Now Available for Downloading from homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

Backup Your Files first Before Installing This Update!!!
(PcrRemote.ini and PcrServer.ini)

For Users who have Sent a Donation, please send your Registraion Info (Under the Help Menu) so I can create and send out your key file to set up your new limits...

This update only has a few Additions, Changes & Fixes:
Feb 08,2008 - Fixed: Reduced COM Ports to 16 (Max Supported by MS COM Control).
Feb 09,2008 - Added: Server PassWord to Control Access from Remote Users.
Feb 09,2008 - Added: Speed Governor on Knob Controls.
Feb 09,2008 - Added: COM Status LED's in Server Display.
Feb 12,2008 - Added: Load/Save Bank options to Server's File Menu.
Feb 12,2008 - Added: Load/Save Profile options to Server's File Menu.
Feb 19,2008 - Fixed: Reading Registry Items in Vista 64 Bit OS.
Feb 22,2008 - Added: External Display of DTMF Results.
Feb 23,2008 - Added: Duplex Frequency Offset.
Feb 24,2008 - Added: Scanning of All Banks.
Feb 24,2008 - -----: Increased Number of Scan Banks and Channels According to Donation Ammount.
Feb 24,2008 - Added: Selection of Server in Client now Shows Correct Associated Connection Port.
Feb 24,2008 - Fixed: Entering data in Server ComboBox or Port TextBox, No longer entered in Frequency.
Version 0.66.035 Released 02/25/2008

Regards,
Jay

5077. U.S. & World Radio Discussion Group (Invitation)

Yahoo group: PCR1000

From: Antônio Schuler
Topic: 5077 Message: 5077

Dear PCR1000 friends

We want to invite you for the group U.S. & World Radio. Below a brief description.

U.S. & WORLD RADIO DISCUSSION GROUP

This is a discussion group for those interested in U.S. & World Radio, covering traditional, terrestrial broadcast, international shortwave and satellite radio. If it has to do with local, regional, domestic U.S. or international radio, or just plain general radio, and you have an interest, we invite you to join.

Whether you are a current, seasoned radio profesional, or someone who just has an interest, or possibly a radio historian, you are invited to share your radio stories, photos and sound from the past while we also look at present day radio and its future.

To join us:
http://groups.yahoo.com/group/usworldradio

All are welcome!!

Greetings!!

Marc Tyll (Owner)
Antônio Schuler (Moderator)

5078. 10.7MHz tap

Hi Loren,

please have a look at my website www.dd1us.de in the folder "ham downloads". You can find there an article named "A new toy in the Radio Shack: the ICOM PCR-1000 wideband receiver (a review and tips for improvements incl. DRM)".

I hope this is what you are looking for. If not please let me know.

Best regards

Matthias

5083. Want to sell PCR-1000

Yahoo group: PCR1000
Date: 2008-03-16 17:59:09 UTC
From: dave
Topic: 5083 Message: 5083

Hello,

I'm looking to sell my PCR-1000 and I don't know what a fair asking price might be. I bought it in 2004 and it seems to be working as well as day 1. I have the firmware backed up etc.

Just too much radio for me, I never really listen to shortwave, etc and it just seems a waste to use it for conventional scanning when I have many scanners that do that better.

Anyhow, what should I ask for if I put it up for sale?

5084. Re: [PCR1000] Want to sell PCR-1000

5086. Re: [PCR1000] Want to sell PCR-1000

Yahoo group: PCR1000
Date: 2008-03-17 02:08:08 UTC
From: Mark J Culross
Topic: 5083 Message: 5086

Matthew:

Go to the files section & look for the file PcrMC98.zip. It contains the latest version of the program that I wrote a while ago. It is FREE, so please give it a try. If you like it, keep on using it. If not, nothing spent, nothing lost !! The weakest part is the lack of a HELP file. Instead, I put all of my work into the program itself, and did my best to make it self-explanatory.

There are actually two executables included in this ZIPfile. The first, PcrMC.exe is a DOS text-only version . . . it represents my original program development. Much later in the development cycle, I decided to implement the same capabilities in a DOS 640x480 graphical version called PcrMC-SA.exe. Both of these run very well under multiple versions of Windows (Win95, Win98, WinME, Win2K, WinXP . . . not yet tested in Vista) . . . PcrMC.exe will run either full-screen or in a DOS window . . . PcrMC-SA.exe will only run full-screen (Windows restriction).

The basic syntax to run the program is as follows:

pcrmc[-sa] [-com1 | 2 | 3 | 4] [-fast] [-debug] [filename]

Note that all command-line options are case-insensitive.

[-com1 | 2 | 3 | 4] : you can specify the COM port on the command-line to override that which is recorded in the PCRMC.INI file.

[-fast] : this will skip the pause on the "HELP" screen as the program is started up.

[-debug] : this will cause a PCRMC.DBG file to be created that will contain time-stamped entries for each command sent to the PCR-1000 and each status returned from the PCR-1000. Note that when the receiver is used as a scanner, this debug file can grow quite large in time !! Be aware of the disk-space requirements by running this for a long time.

[filename] : you can specify the "program" file that you'd like PcrMC to initialize with upon startup (it is not necessary to also specify the file extension as this is assumed to be .PGM). See some of the included "program" files for examples of how to make use of the powerful capabilities within the PCR-1000 that Icom's included Windows program woefully ignores and/or hides from us !!

Good luck & let me know what you like/dislike. It's been quite awhile since I worked on it, but updates are not necessarily out of the question.

I definitely still use it all of the time. Even though it works especially
well on very old (DOS-only) PCs (since that is what it was originally
developed for), it works equally well under Windows (see above).

A couple of notes that may prove very useful are as follows:
ALT-H shows a help screen (the closest thing there is to a HELP file !!)
ALT-A goes into "automatic" (demo) mode which will let you exercise
all of the program features even without your PCR-1000 attached
ALT-P starts/stops "program" mode
ALT-S starts/stops "scan" mode
ALT-Q quit without saving configuration
ALT-X exit & save current configuration

Pressing any of the selection keys (for example, O for mode) will cause
that field to blink, indicating the selection that can be controlled using
the up/down and/or left/right arrow keys to change the selection. Press
the ENTER key to complete the selection for that field.

Frequency information can be entered anytime that no other fields are
already active (pressing F first is not absolutely necessary). When
entering frequency information, you can also use the backspace key to
make corrections. As well, you can use the ESCAPE key prior to
hitting the ENTER key in order to discard any frequency changes made
and return to the previous frequency setting.

Some keys take effect immediately (typically those that alternate
between two settings) such as G for AGC on/off, B for NB on/off, etc.
Some keys have multiple functions (but with related control) such as
P for bandscope...pressing P once will let you select the bandscope
speed...pressing P again while the bandscope selection is active will
change the bandscope vertical resolution multiplier.

Feel free to e-mail me if you have any questions, comments, and/or
suggestions for improvements.

Have fun !!

Patrick Masotta's PCR1000BUR in the files section works well for recalibrating the frequency as it has a bargraph type of adjustment where you can center in on the frequency while listening.

5100. AC Hum on audio

Yahoo group: PCR1000
Date: 2008-03-26 00:40:06 UTC
From: Loren Moline
Topic: 5100 Message: 5100

Hello,

I noticed when running my receiver I could hear a hum in the speaker when I hoked up the antenna showing there was a ground loop. Running Spectran showed lines at 60 and 120HZ.
First thing I did was to use some audio isolation transformers on the output of the receiver to the computer and that got rid of the hum and of course the line at 60Hz. Stil had the 120Hz line so I changed the power supply to a regulated switching supply and the 120Hz line was gone. Now I have no garbage between 0 and 200HZ.

From: Patrik Tast
Topic: 5100 Message: 5102

Hi Loren,

I agree and disagree.

I agree on if you have a "bad power" connected your receiver you will hear more "garbage"
Though, I have not seen yet a receiver that does not recommend a regulated power supply?

I then disagree that you are cured (100%) since most of the AC noise is coming through your antenna
from nearby power lines and that is tricky to cure (power company stuff).
You will most likely hear that garbage (at 60/120Hz) again when it is very dry at your place (station).

We who receive NOAA POES APT on 137 MHz suffer the same as you noted and have noted that
when there are clouds over the receiving station the AC interference tend to be less but as soon as it gets dry
we are in trouble.

Sample image AC interferred image at
http://www.poes-weather.com/~patrik/tmp/ac-noise.jpg

Good though that you found the major problem source.

From: DSNman@comcast.net
Topic: 5100 Message: 5103

Patrik,

The hum is not coming in on the antenna..I am listening to S-band through a downconverter located 50 ft from my receiver. The hum could be the result of using power from 2 different sources. It is not static..it is a regular ground loop and I am positive it will not return.

I Had left the Group 2 years Back due to the Crap Spam.....I thought
that the so called Moderator at the Time had Stoped it...and rejoined,
but not so

I real dont think there is a Moderator as in a discussion with
Yahoo.co.nz today they said no one is listed and they are getting fed
up with people starting groups and not moderating them.....I to will
be leaving unless rtheres a 100% action from our so called usless
moderator

No other SW or Ham group I belong to suffers from CRAP SPAM like this
group, and after dxing for more than 55 years I dont need it.

What angers me is how spammers can get away with their pollution and senseless digital graffiti. Freedoms involve responsibilities but the very freedom to cause such havoc is in itself a deprivation of freedom.

International tracing methods are known to be highly advanced yet prosecution is rare. It seems more a case of the "Powers that be" who need solutions to impotence!

5141. Let's Elect a NEW Moderator

Yahoo group: PCR1000
Date: 2008-04-02 00:03:25 UTC
From: Jay
Topic: 5141 Message: 5141

Hi All,

I contacted Yahoo about this groups SPAM problem and the lack of an active Owner/Moderator and they have a solution for us. We just need to elect a NEW person to take over as moderator and Yahoo will modify this person's account to Moderate Status :)

Below you will find the reply from Yahoo...

So, I will include myself as a possible candidate for the job...
If you would like to be added to the list, add your name below in a reply message.

People to be considered:
1.) CraazyC
2.)
3.)
4.)
5.)
6.)
7.)
8.)
9.)

<--- Snip ---->
If you you would like to select a new moderator please use the group's polls feature to create a poll. Then list the Yahoo! IDs, or email addresses, of a few members who would like to be a moderator as these will be the choices for the poll. You will need to announce the poll to your group and ask the members to vote on who they would like to be moderator. Please allow the poll to remain open for a period of at least one week. Once the poll has closed, please email a reply back to us and we will appoint the "elected" moderator.
<---------->

Regards,
Jay

I agree. Although I've not been visiting much to this forum in recent months, it was due primarily to all the spam that is getting past the filters, absence of a proactive moderator, and more or less a general proactive exchange of ideas, thoughts and technical discussions on the PCR series of recievers. I'm all for a new moderator; maybe even more than one, seeing as we all have to have some form of income and that it's not always easy to run a moderated bbs singlehandedly.

Sent: Tuesday, April 01, 2008 8:03 PM
To: PCR1000@yahoogroups.com
Subject: [PCR1000] Let's Elect a NEW Moderator

Hi All,

I contacted Yahoo about this groups SPAM problem and the lack of an active Owner/Moderator and they have a solution for us. We just need to elect a NEW person to take over as moderator and Yahoo will modify this person's account to Moderate Status :)

Below you will find the reply from Yahoo...

So, I will include myself as a possible candidate for the job...
If you would like to be added to the list, add your name below in a reply message.

People to be considered:
1.) CraazyC
2.)
3.)
4.)
5.)
6.)
7.)
8.)
9.)

<--- Snip ---->
If you you would like to select a new moderator please use the group's polls feature to create a poll. Then list the Yahoo! IDs, or email addresses, of a few members who would like to be a moderator as these will be the choices for the poll. You will need to announce the poll to your group and ask the members to vote on who they would like to be moderator. Please allow the poll to remain open for a period of at least one week. Once the poll has closed, please email a reply back to us and we will appoint the "elected" moderator.
<----------->

Regards,
Jay

Yep, it would be nice to have more than one moderator, but for now, yahoo said they will appoint the "elected" moderator, meaning one one for now. Which is better than none :)

Good to hear that this group "finally" got a moderator?

What about Jim's hard work? In my opinion you should have made an effort "times ago" and contacted yahoo.
I wote for Jim's new group <http://groups.yahoo.com/group/PCR_1000/> and tell yahoo to drop this.

Don't forget to purge the spammers when you get elected. Immediately cuts down on the junk. Shut down the open membership and moderate that as well. They'll quit trying after a while. If you need a backup, let me know.

Hi John,

Yep I agree. Plus going through the message archive and removing all spams and placing those authors in a banned from group state.

But we still need more candidates for the moderator.
If no one else volunteers by the 8th, I'll create the poll on the 8th and add the names of the latest active users in this list (to satisfy Yahoo's Request)...
(Patrik_Tast, BagMouse7, ScoSgt, JohnStark and Matthias if they don't object as being a "Place Holder")

The poll will start on the 8th and end on the 15th. I will then reply to the message from Yahoo on the 15th, alerting them that the poll has ended and set the winning candidates' status to moderator...

Jay

From: Andrew
Topic: 5154 Message: 5154

Hi all,

I've been following all this with great interest, 'cause the spam problem started quite a while ago in this group.

Good to see that things are now moving in the right direction.

I will vote for anyone who has a serious interest in keeping this group going, and moderating it properly.

The whole point of this sort of specialist interest group is to share ideas and things, and we can do without all the recent crap.

AW.

5163. New poll for PCR1000

Yahoo group: PCR1000
Date: 2008-04-08 21:00:50 UTC
From: PCR1000@yahoogroups.com
Topic: 1832 Message: 5163

Enter your vote today! A new poll has been created for the
PCR1000 group:

Who would you like to be your New Moderator?
The Top 2 people in the list have shown interest in becoming your new Moderator, while the rest are "Place Holders" and may not have time to moderate the group.

Poll will CLOSE on April 15th...

Jay (CraazyC)

o Jay/CraazyC (crazycalifornian@...)
o Paul (yahoogroup@...)
o BagMouse7 (bagmouse7@...)
o ScoSgt (SCOSGT@...)
o JohnStark (johnstark@...)
o Matthias (dd1us@...)
o Patrik_Tast (patrik@...)

To vote, please visit the following web page:
http://groups.yahoo.com/group/PCR1000/surveys?id=2687291

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

Yahoo group: PCR1000
Date: 2008-04-10 02:53:54 UTC
From: dvd_lvtt
Topic: 5166 Message: 5166

OK, here goes:
I have noticed within the last 24 hours, my PCR1K drifts off frequency.
It sits at ambient (23C), not near any EMI or RFI sources. I didn't
note the degree of drift, but as soon as I get another chance, I'll
light off the Sig Gen and see how much drift it has over time. Just
fishing for ideas and suggestions..

Hi Ryan,

"Ham Radio Deluxe" is my favourite for when I'm in a
listening mood.
http://hrd.ham-radio.ch/

It's a potent freeware that's constantly updated and
for many receivers including PCR1000 (which still have
high value IMHO).

Regards,

Fred.

Hi Ryan,

"Ham Radio Deluxe" is my favourite for when I'm in a
listening mood.
http://hrd.ham- radio.ch/

It's a potent freeware that's constantly updated and
for many receivers including PCR1000 (which still have
high value IMHO).

Regards,

Fred.

Hi Ryan,

there is also RadioControl, which supports many other receivers beside the PCR-1000 and will also
get IC-PCR1500 support soon, if you need a frequency database, memory files, scanning etc.

The URL is www.radioctl.com

Still waiting on Yahoo to do their thing...

A different person replied and said we need more than 1 choice, eventhough we had 7 and said we may have to create a New Poll?
I replied back and stated that we had 7 choices and asked them to reconsider their decision, otherwise we'll be flooded by SPAM for an addition few more weeks...

Maybe if a few more users sent an email to Yahoo, they might change their mind a bit sooner :)

What angers me is how spammers can get away with their
pollution and senseless digital graffiti. Freedoms
involve responsibilities but the very freedom to cause
such havoc is in itself a deprivation of freedom.

International tracing methods are known to be highly
advanced yet prosecution is rare. It seems more a
case of the "Powers that be" who need solutions to
impotence!

I use a PCR-2500 and yes I have used it for satellite images. I get crap pics because I only have a discone at the moment but maybe you've heard of WXtoImg? This program takes care of all the frequencies for you so you don't have to worry about that. It also has integrated PCR control I think.

From: Jay
Topic: 5227 Message: 5227

PCR Pro version 1.12.253 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/PcrPro/PcrPro.html
This update has a few Additions, changes and fixes...

Apr 04,2008 - Added: Direct Frequency input using keyboard.
Apr 04,2008 - Fixed: Entering Frequency in Freq TextBox.
Apr 05,2008 - Added: Auto-Connect at Startup.
Apr 06,2008 - -----: Importing Corrected Talkpcr Fql files.
Apr 12,2008 - Added: AFC, AGC, ATTN, NB, VSC and DSP settings Saved for each Channel.
Apr 13,2008 - Added: Channel Display Grid that allows you to edit Channel Settings.
Apr 13,2008 - Fixed: Scan Speed knob initial setting.
Apr 14,2008 - Fixed: Reset Scan Button when No Scan Banks Selected to Scan.
Apr 14,2008 - -----: Removed Scan Delay Menu.
Apr 14,2008 - Added: Scan Delay Settings Button.
Apr 14,2008 - Fixed: Update Freq Display in Frequency Search.
Apr 14,2008 - Fixed: Selecting Channel Scan Button, then changing channel caused Bank/Channel Scan State to be Reset.
Apr 14,2008 - Added: Display of Scan Speed / Delay value when adjusted.
Apr 15,2008 - Added: Update Channel Display during Scanning.
Apr 15,2008 - Fixed: Removed "Check Mark" from Organize Banks menu.
Apr 15,2008 - Fixed: Scan Up and Down buttons only scanning upwards.
Apr 15,2008 - Fixed: "No Bank Selected" when Scan Bank button depressed.
Apr 16,2008 - -----: AFC Button now only enabled in 6kHz/15kHz FM.
Apr 16,2008 - Fixed: Noise Blanker now activated by NB Button.
Apr 18,2008 - Added: Duplex Offset Frequency setting for All Channels.
Apr 18,2008 - Fixed: Changing CTCCS Settings now have an effect.
Apr 18,2008 - Fixed: Setting of DTCS Options when changing channels.
Apr 18,2008 - -----: Dual Receiver for PCR-2500 should be working now.
Apr 18,2008 - Fixed: Windows Height Adjustment for Vista PC's.

thanks for the update, it's nice to be able to type a frequency directly into the box. I use a PCR-2500 on a Windows XP Pro machine with SP2.
1) does version 1.12.253 support the USB codec sound driver? I found when using the program the only sound I could get was from the speaker on the PCR-2500, I couldn't get any sound from my PC speakers, and I selected the USB codec as my input audio device. Other stuff played from the speakers fine so my sound settings were ok. My usb audio codec device is version 5.1.2535.0 date 01/07/2001 provided by Microsoft.
2) also, I found that after exiting the program my mouse button would lock up and nothing would respond to a click. In the task manager I noticed the pcrpro.exe was still running and I had to manually end the process and then my pc came back to life.
3) the program also crashed when I tried diversity but that could have been a one-off, I didn't try it again after that.
Along with these bugs it's worth mentioning my pc is a pile of old crap, soon to be replaced so that could be one reason for the problems I had. Even using Icom's own controller software my pc sometimes suddenly reboots.

Hi Tony,

1). If the USB Audio is selectable in your Windows Sound Card settings,
then that part is working as expected.
I don't beleive it's a USB Driver problem, but rather how Icom handles
USB Audio. If you can use the Windows Sound Recorder (Selecting the USB
Audio device) and record the sound out of the PCR, then the drivers are ok!

2). This could be due to the Donation Screen poping up in the background
before closing, I'll have to run some tests to see if I can duplicate it...

3). Hmmm, maybe something not being handled right from the response of the
2500 going into diveristy mode? I'll take a look and see...

Thanks for the report,
Jay

the usb codec driver can be selected in the windows control panel as an audio input device but windows will not provide a mixer for it. The volume and advanced buttons for it are greyed out, so this could be the problem and yes, the Icom software probably does handle it differently.

> 2). This could be due to the Donation Screen poping up in the

> before closing,

you know I've got a feeling in my bones the donation screen could be the cause of a lot of troubles with the program. I can't back this up with anything but it could well be the spanner in the works.

In PCR Pro, click the Menu Button -> Options -> Sound Card Setup, if you can see the "USB Audio" selection on the device list, then you can use the windows sound recorder to record the audio from the PCR as a test...

I wouldn't say that... It may interfere with closing on the first run, but as far as causing problems while the program is running, nahhhh - don't think so :)

Jay

yes windows sound recorder will record the sound from the scanner while running PCR Pro but it won't route the sound in real time to the PC speakers. The only sound I get is from the little speaker on the Icom box. After doing a short recording in WSR I clicked stop, had to close PCR Pro. I then got 'Icom PCR Scanner Control has encountered a problem and needs to close. We are sorry for the inconvenience.' and I clicked close. My PC then locked up and the sound was still coming out of the scanner box. I switched the Icom scanner on and off and sfter a few seconds this cleared the problem and my PC came back to life. I was then able to play the sound recording and I heard that it did record the scanner sound.
The problem I have is that I get no sound from my PC speakers when running PCR Pro. Hopefully someone else out there might read this and try their PCR-2500 with PCR-Pro. This would establish whether the problem was with my computer or with the program.

Hi Tony,

Thanks for the feedback...

Ok, I'm just verifying that the USB Audio was infact turned on through
software.
I'm thinking that Icom Records and Playsback the USB Audio at the same time
to acheive playing back on the speakers instead of acting like a passive
Line-In or Mic Input...

I'll have to look into why the program is stuck in a loop and which one. I
do have code in place so that if the PCR's power is turned off, that it
exit's some loops, so that's a good clue where to start looking...

You might also want to ask the users at the PCR Pro Yahoo Group:
http://groups.yahoo.com/group/PcrPro/

Tony,
Thanks for the heads up on the program. I built a "turnstyle" antenna some years ago, and had moderate success with it, used a 20dBm gain preamp tuned for the 130-140 Mhz band. Omni polarization. Since I've been playing with the "big boys" in Sats, mostly 6Ghz to 18Ghz I've had little time to play down in the lower frequencies...but...with life changing around me, I will probably be getting back into the monitoring side again with a vengeance...

I use a PCR-2500 and yes I have used it for satellite images. I get crap pics because I only have a discone at the moment but maybe you've heard of WXtoImg? This program takes care of all the frequencies for you so you don't have to worry about that. It also has integrated PCR control I think.

5238. PCR Remote version 0.67.037 Now Available

Yahoo group: PCR1000
Date: 2008-04-25 03:01:54 UTC
From: Jay
Topic: 5238 Message: 5238

PCR Remote version 0.67.037 Now Available for Downloading from homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemote.html

This update only has a few Additions, Changes & Fixes:
Mar 02,2008 - Added: StatusBar to Display Scan Speed/Delay values plus Date
& Time.
Apr 05,2008 - Added: Auto-Connect at Startup.
Apr 06,2008 - -----: Importing Corrected Talkpcr Fql files.
Apr 09,2008 - Added: Saving/Loading Scan Delay Window Position.
Apr 12,2008 - Added: AFC, AGC, ATTN, NB, VSC and DSP settings Saved for each
Channel.
Apr 13,2008 - Added: Channel Display Grid that allows editing of channel
settings.
Apr 18,2008 - Added: Duplex Offset Frequency setting for All Channels.
Apr 18,2008 - Fixed: Windows Height Adjustment for Vista PC's.
Apr 21,2008 - Fixed: Resume Scanning after changing Channel Scan Option.
Apr 21,2008 - Fixed: Updating Client's Bank/Channel display after Clicking
Hold.
Apr 21,2008 - -----: Changing Scan Speed knob now shows "Sample Time" in
miliseconds.
Apr 22,2008 - -----: Client now remembers Last Selected Server.
Version 0.67.037 Released 04/24/2008

Regards,
Jay

5239. PCR Pro version 1.12.254 Now Available

Thanks to all the members who helped.

5248. TtunkPCR doesn't work.

Yahoo group: PCR1000
Date: 2008-04-30 06:26:14 UTC
From: nimrodat
Topic: 5248 Message: 5248

Hello
I installed TrunkPcr in my IBM Thinkpad 600E laptop(pII).
The search mode is going well(I can listen to conventional broadcast),but when I start the "trunk" mode-my laptop doesn't hear anything! it searhes and searches without receive any voice.
I've tried several TrunkPcr versions,changed the O.S. from WIN XP to WIN 98,checked the cables and the power supply-everything looks good but the system won't work.
To complete the picture-the system is tuned to MOTOROLA 800 IIi,the ComPort is o.k. and the packet "blackbox" output-is connected to the laptop mic input.The mic recording level is right and not overloaded.
In another laptop it works well-so the problem is probably in my IBM Thinkpad 600E laptop.
Any idea?
Thanks.

Hi,

Have you tried reverseing the polarity in the Trunk Settings?
If it works well in another laptop, then it's just a matter of choosing the right settings...
Check or change the sampling rate and the O'Scope display to see that it is in fact not being overloaded (waveform display stays within the height of the O'Scope display)...

It's works on my IBM ThinkPad 380 :)

Regards,
Jay

Hi,

Have you tried reverseing the polarity in the Trunk Settings?
If it works well in another laptop, then it's just a matter of choosing the
right settings...
Check or change the sampling rate and the O'Scope display to see that it is
in fact not being overloaded (waveform display stays within the height of
the O'Scope display)...

It's works on my IBM ThinkPad 380 :)

Regards,
Jay

5254. PCR1000 packet output

Yahoo group: PCR1000
Date: 2008-04-30 17:59:52 UTC
From: Loren Moline
Topic: 5254 Message: 5254

Hello,

I am wondering what is the difference between the packet output and
the audio output on the PCR1000. Is it frequency response?

What programs use this output?

Loren WA7SKT

From: scosgt@aol.com
Topic: 5254 Message: 5257

Packet output, or discriminator output, is a raw audio signal that has not
been processed, so it is "pure". It is used for the control channel on trunking,
and to receive and download various types of data.

Search the web for discriminator output

Hi Loren
it is close to a "discriminator tap", providing a wideband output
suitable for data decoding, as far as I am aware
Audio output would have some de-emphasis applied.

Tony,et al,
I looked at the packet output signalling and looked at the screen caps that were on the site that Jay listed elsewhere.
It's interesting that the filtering on the packet socket is *not to good*. Especially if you're decoding MSK or GMSK data streams, those drop outs can definitely mess up decoding really bad.

5270. Noise on HF

Yahoo group: PCR1000
Date: 2008-06-20 12:51:24 UTC
From: Paulo T Castro
Topic: 5270 Message: 5270

Hello all,

i´m suffering with very much noise here.
I can´t receive anything on HF bands, the
noise climbs up to S9+40 on certain freqs.
All the units (ICOM IC PCR1000 + KENWOOD
TS2000, ANTENNA G5RV + all computer hardware
, ETC.) are grounded.

How to know with simple tools if the ground
rod is correctly instaled, since the rod is
inserted bellow the floor, inside the walls?

Anyone have an idea how to deal with this
noise? How to homemade some sort of device
or methods to kill or maybe attenuate the
interference?

If someone have interest in really know about
they sounds like, i have a any samples of noise in
mp3 format.

73s for all and many thank´s in advance.

Paul

Topic: 5270 Message: 5271

Hi Paul.

It sounds like you have some very noisy device near you.

What I would do is get a portable AM radio and walk around your house / yard neighborhood and see if the noise gets stronger or weaker.

Also try switching off devices in the house one by one and listening.

Light dimmers, flat panel televisions and electric motors are often sources of broadband RF noise.

You may also have the problem I do with noisy power lines.

I have a power line right behind my house that occasionally gets very noisy and wipes out most of the HF spectrum.

I suspect a bad ground or insulator.

I am trying to track down the bad pole and report it to the power company.

You might try touching the antenna of your radio to the ground rod and see if it gets quieter.

A properly grounded rod should have almost no noise / signal on it.

I am lucky enough to be on the ground floor of a house and I drove a 2M long ground rod into the earth right outside my shack.

I then ran the thickest wire I could find from it to a copper pipe bolted to the back of my bench.

I then ground all of my equipment to the copper rod with thick wire.

Good luck on the hunt for noise.

Cheers....dave.

5272. Serial 2 USB ON PCR 1000

Yahoo group: PCR1000
Date: 2008-06-21 01:33:10 UTC
From: iain_stevens69
Topic: 5272 Message: 5272

Hi Everyone,

I am so pleased that I found this cool group for fellow owners of the amazing PCR 1000.

Help needed, when I bought my unit when they were first released I had a RS 232 serial cable, I have heard that you can connect a cable that is RS 232 9 pin one end and USB 2.0 the other, I have bought such a cable that was recommended to me by my local ham radio shop dealer.

I would like to know how this cable is installed when I installed the software that came with the unit it is set to RS 232 but it does not allow you to change it to a USB cable mode.

Any help would be appreciated

Iain
iain_stevens69@...

P.S A big thank you to the founder or founders of this cool group

5273. Re: [PCR1000] Serial 2 USB ON PCR 1000

Hi Iain
You will likely need to use the software for the PCR1500 or some of the 3 rd party software u can get, rather than the software for the 1000. It was not designed for USB.
Hope this helps
Kathryn.

Subject: [PCR1000] Serial 2 USB ON PCR 1000

Hi Everyone,

I am so pleased that I found this cool group for fellow owners of the amazing PCR 1000.

Help needed, when I bought my unit when they were first released I had a RS 232 serial cable, I have heard that you can connect a cable that is RS 232 9 pin one end and USB 2.0 the other, I have bought such a cable that was recommended to me by my local ham radio shop dealer.

I would like to know how this cable is installed when I installed the software that came with the unit it is set to RS 232 but it does not allow you to change it to a USB cable mode.

Any help would be appreciated

Iain

I have found since the introduction of the "mini-flourescent" tubes that screw into the light sockets that they are notorious for RFI / EMI from the circuits embedded in the bases. G.E. is horrible. (I don't use flourescents, I have MS and am sensitive to certain lighting types...sucks.)

Hi
As far as I know the RS 232 to USB converter cable emulates a serial connection via USB so the PCR 1000 thinks it's connected to a RS232 socket when you go to options / com ports you should see the converter listed if not try the ports one at a time
all the best
Chris

Hi Iain,

When you install the 232-USB adapter software it will configure the cable to appear as a new COM (serial) port, you should also be able to change the port number using either the control panel or the adapter utility app. Once you have figured out what com port is assigned to the adapter it's just a case of setting your PCR control software to the corresponding port. Be warned though, not all cables work correctly. I have one here that IDs as a Prolific, it works fine on one PC but refuses to talk to anything on the serial end when installed in another PC, both systems have a VIA USB chipset and XP SP2.

I got mine from Ebay for $300.

There is one on there now but the seller has an unrealistic starting bid of $650.

Keep checking on Ebay.

Cheers....dave.

5279. VLF on PCR-1000

Yahoo group: PCR1000
Date: 2008-06-23 21:07:39 UTC
From: bushbat2002
Topic: 5279 Message: 5279

Hi all.

I have successfully been receiving VLF (30 Khz - 300 Khz) on my
PCR-1000 by connecting it to this VLF upconverter:

http://home.att.net/~jacksonharbor/lfconv.htm

It's a simple kit and you will need to put it in a box but it
upconverts 30 - 300 Khz to either 4 Mhz or 10 Mhz.

There you can set your PCR-1000 to start tuning at 4 or 10 and work up.

In my case, 10.212 Mhz is really 212 Khz, aircraft beacons etc.

Great fun.

Cheers....dave.

5280. SV: [PCR1000] VLF on PCR-1000

Yahoo group: PCR1000
Date: 2008-06-23 22:41:47 UTC
From: Tobbe
Topic: 5279 Message: 5280

Hi,

I receive vlf on my PCR1000 without a converter Had wrong antenna but if I had changed from the Dressler ARA-2000 to the Wellbrook ALA-1530 I had probably heard more.

Heard now, just a check:

129.1 kHz DCF49 in Germany, ascii

147.3 kHz DDH47 in Germany, rtty

77.5 kHz DCF77 in Germany, time, very weak

Maybe the vlf converter is more sensitive than the radio itself, that I don□t know anything about.

Regards

Torbjorn in Sweden

5281. All-round Antenna

Yahoo group: PCR1000
Date: 2008-06-25 11:37:14 UTC
From: John
Topic: 5281 Message: 5281

Hi all. I am new to the group and to the PCR1000. Just bought mine on Ebay for $345.00 CND. Considering that until the 1500/2500s came out the 1000s were selling up here for $800.00 new I think I got a reasonable deal. Anyway, I am looking for a antenna for this radio. I have been looking at the PAR ENDZFED antenna and it looks preety good. However, I have limted space and the other antenna I am considering is the AOR SA7000. Just wondering if anybody has this antenna and can tell me how well it works, specificly for SWL.

Loking forward to using the radio and perhaps contibuting to the group in some small way. THX

JT

From: Tony
Topic: 5281 Message: 5283

yes JT I have the AOR SA7000, it's a good antenna if you need discretion and if you have limited space but my discone is better for above 50MHz. The SA7000 will pick up frequencies higher up but these higher frequencies always come in fatter and clearer on the discone - which is a Diamond D130.
The SA7000 is better for shortwave though and in that band and I drive mine with an RF shortwave amp. If there is some distance between your scanner and the SA7000 (as there is with mine) you need to use suitable cable or the higher frequencies will be lost. My SA7000 is away from the house down the garden on a tall pole and I was told by AOR to use RG123, which I did. Overall I'm pleased with it but that's because I have the PCR2500 which is a diversity scanner and I use both antennas at once. For the higher frequencies the scanner always chooses the discone.

From: John
Topic: 5285 Message: 5285

I guess I'm just too old school. I've had this radio for a while but I just can't get used to
tuning it through the computer. I like knobs and buttons. So before I go out and buy a $300.00 antenna I have decided to sell the 1000 and look for an older shortwave set such as a Kenwood or Icom. The PCR 1000 comes with the original box, manual, antenna, serial cable,
power supply, and software on two floppies. If you are using XP you can download software from Icom's web site free to run the radio on that OS. This radio also has the DSP module installed. Price is $350.00 US and that includes insured shipping to anywhere in Canada and the lower 48 of the USA. Otherwise shipping will be a little more. I'd consider a trade for something like a Kenwood R2000, or R5000 or an Icom R70 or R71 or something like that(with knobs) Post or email me if interested. I will wait about a week then I'm going to post on
Ebay. THX

Hi Art. As you say the radio looks mint. I have done some research and found that over all people are quite happy with the 8800 save for the blinking LCD problem. From what I have read problem seems to be linked to bulbs with the fix being to replace with LEDs which you have already done. It seems to fit my needs and I am willing to trade if you are interested. I have two things. 1) Are you looking for some cash with the PCR1000 or a straight trade? 2) Were you aware there is a PCR1000 on Ebay at the moment that has the DSP module and has a bid of about $150.00 at this point. I am certainly not trying to steer you away from my radio but I would hate to see you give up the Yaesu if you didn't have to. Let me know what your thinking and we'll see if we can work a deal. BTW I will send you some pics tomorrow when I get home from work.

5290. A few days now with the 1000 and?

Yahoo group: PCR1000
Date: 2008-07-09 00:55:38 UTC
From: vistamc69
Topic: 5290 Message: 5290

Recieved the 1000 quickly from Universal radio, I have tried a few control programs like Ham Radio Deluxe, Pcr Pro, Talkpcr, IcomControl3.3.
I recieved Icoms software version 1.3 but can't find the newest version anywhere does anyone know where I can download it? I would like to compare it to the others.

From: John Schneider
Topic: 5291 Message: 5291

Good afternoon,

I had one of these wonderful black boxes within a year after they were introduced. Well...kids came along and I had to let it go (I still have the registration code for TalkPcr which I purchased the same month it became available). I am now in the market to re-purchase and am looking for a used unit in excellent shape. Please email direct with price and condition.

Thank you for your time.

Icom software version 2 (compatible with XP) superseded ver 1.3 and you should find it among other programs in this forum's "Files" http://groups.yahoo.com/group/PCR1000/files/
My favourite is Ham Radio Deluxe and sites with links/software include
http://qsy.to/pcr/control.html
I haven't tried "IcomControl3" - what's it like and where from?
Fred.

Fred:
You have found the correct ZIP file which contains the program & associated files . . .
Sorry, I don't understand what may have given the impression that it would be specific for any particular region (maybe the *.pgm files, but you can create one of these for any collection of frequencies & ranges that you might desire . . . I just happen to live in the US, so that's what most of the files pertain to, but that's definitely not because of any programmed-in limitations, etc.).
Most importantly, though, unlike Icom's own software, PcrMC/PcrMC-SA can definitely control ALL of the functions of the PCR-1000. As just one example, look at the "step-size", which is an exhaustive list, compared to the very limited "definition by band" that they support. As yet another, especially take a look at the flexibility of the spectrum scope, compared to their pathetic limitations, etc. (sorry, I can get very emotional when we are given such a powerful tool as the PCR-1000, but then limited to what we can do with it using the supplied software).
Something that may appeal to users of older (laptop) PCs (like me), PcrMC/PcrMC-SA can be run from either Windows or DOS.
If you need more info just let me know . . .
Good luck & most of all, have fun !!

Hi Mark,
Yes - the .pgm files gave me the clue and no doubt others will have made up some for other regions :-)
I share your feelings about how Icom made a marvel - then crapped on their own doorstep with their program.

Also can admire concise, crisp programming that does the needful :-) (Enormous Windows programs less so).
A readme / help file included in the zip is always useful - as would be advice ref why/which of the two programs suit what best?
I'll give it a try.
G'nite:-)
Fred.

5300. Linux eeprom backup software?

Yahoo group: PCR1000
Date: 2008-07-23 13:54:46 UTC
From: dchurch24
Topic: 5300 Message: 5300

Hi All,

I have just become the proud owner of a second-hand PCR1000 - due to be delivered tomorrow.

I use Linux exclusively at home and have found plenty of software about for controlling the PCR.

However, reading around the Internet, there are lots of sites that say "you MUST backup your eeprom" etc...

Is there any software I can use under Linux to back the eeprom up before I get started?

If not, I suppose I could always take the box into work and back the eeprom up on my work (windows xp) machine, but I would rather be able to do this at home.

Thanks in advance! ;-)

5302. SWBC A08 Rev. 8 and SWLog Build 3127 Released

Yahoo group: PCR1000
Date: 2008-07-25 01:30:01 UTC
From: Robert Sillett
Topic: 5302 Message: 5302

Revision 8 of the A08 SWBC Schedules has been posted to the Shortwave Log web site. The SWBC schedules are published in industry-standard XML format and also come in variants of the defunct ILGRadio format.

Shortwave Log Build 3127 has also been posted and has several improvements to RCS (Radio Control Server) and the QSL module.

SWLog and its RCSweb interface allows for a receiver to be put on the Internet with either the IIS or Cassini web servers.

5304. help requesttalkpcr

Yahoo group: PCR1000
Date: 2008-08-04 20:27:52 UTC
From: franky_beneteau
Topic: 5304 Message: 5304

Hello group

I have been using my pcr1000 for a few years now with talkpcr 2.4.

All was well untill i downloaded the exe for ver 3.0beta and copied it to the talkpcr directory with the old version, all sortds of error messages later so I uninstalled and deleted all traces of talk PVR and downloaded 2.4.

Unfortunately now it starts ok but cannot import marine database found on the files section and the software just stops and dissapears off the screen

any help appreciated, I would also like to know if there is any working updates to PCR talk or other apps that work well under windows XP

Many thanks

franky

Hello Franky, This is going to be very short as this afternoon i wrote a long reply and when i tried to upload it, it promptly disappeared. Just now i did it all over again and stone me!, it disappeared whilst i was typing it.

So basically, try what i am using for my PCR1000. It's free and incredibly comprehensive with user setupable options. Ham Radio Deluxe is the baby. Download it this instant Hi. That's it. I quit while i'm ahead....Bye! 73 Brian (g0hdi)

Hello franky, well i can't help you with Talk PCR i'm afraid.
However, there are alternatives of course.

I have had a PCR-1000 for years also. I tried Talk PCR briefly way back but didn't like the seperate screens. I like it all tidy and filling the screen in one so to speak. I therefore went for Bonito Radiocom 5, then settled with Ham Radio deluxe. This is a downloadable freebe as you probably know, and if you like playing with settings as i do, you'll have a ball with this prog. All sorts of colour arangements to play with. Customise the bands, put tags on dial to click on fav frequencies, all sorts of things you can do with it. You'll play for hours Franky. you can sweep your own defined spectrun band too to see where the activity is. Click on a peak and you're on frequency. Great for the broadcast bands, i find.

Worth a downloading for play. You can always elbow it afterward if you don't fancy it. Straight serial lead, and no probs with dongles.

Inluded with the prog now is DM780, which i use to drive a SignaLink interface and FT-897 for Feld Hell, my fav mode. However, as a SWL you can use it for RX various modes, such as the above, BPSK31, Throb, RTTY, Olivia, DominoEx and MT63. It does rx SSTV but i prefer MMSSTV (Yes, another freebe *smile*). Of course if you are into rx'ing mega modes, Multipsk (Yet another freebe)is hard to beat. Got the lot, even packet and wx fax. Just connect a lead into the line in/mic in from from your PCR1000 speaker out.

Trouble with Bonito,is you need their dongle for it to work. And RadioCom 6 cost 200 quid, so if you have an anorexic wallet, it's gotta be HRD,right?.

As i say, i use HRD for my PCR1000. I also have an IC-718 which refuses to TX anymore, so i use that as a RX with Radiocom 6 driving it. I leave that normally on 5.680 (Kinloss Rescue), as that is about the only frequency worth listening to with the conditions (sun spot cycle wise) as they are *sigh*..

MMSTV is a brilliant SSTV rx prog by the way, as you just tune to 14.230 say and sit back let it do the biz. Very sensitive, automatically detects the mode being sent and auto starts, corrects slant and saves all your pics if required.

Hope i have been of some help my friend.

Have fun. 73 from Brian (g0hdi)

5320. Problem with Vista?

Yahoo group: PCR1000
Date: 2008-09-10 06:36:05 UTC
From: davoh42
Topic: 5320 Message: 5320

My PCR1000 worked with my old computer running XP. After installing on my new machine running Vista Ultimate, and with a serial board installed, it runs OK for about 10 secs, then comes up with the message "Communication Failed. Cannot access receiver". However, everything seems to be working except the span display is frozen. Pressing "Retry" or powering off then on brings span display back to normal for another 10 secs. Have tried changing compatibility all the back to W95, but still get the message. While the 1000 is perfectly usable, it would be nice if everything worked. Any help would be appreciated.

Also, I have not seen any reference to serial port settings required for the 1000. The settings I have are: 9600,8, none,1 with no flow control. Is this correct?

David

The percon files will need to be converted into the format that the prc 1000 will need to decode the information, just remaning the percon file to MCH will NOT allow you to ues the files. If you do this it will either bomb or give you jiberish.

I do not have the format that is expected for the prc1000 but others may have the info. You also need the information on the format of the percon files to do the conversion. The percon files CAN be converted to work with the prc1000 but it may lack some of the setting that the prc1000 is expecting. The frequencies in the percon file are good to convert and may need editing to the MCH format. Other information in the percon file may not be needed in the conversion , or some information may be lacking.

Usually, you can do the editing in a text file editor to make the changes. Be on the look out for a computer program that will do this for you, I think there are a couple still out there on the net in some of the SWL sites.

I hope this helps, and dose not totally confuse you.

One thing I should also say is that even if you download the MCH files in their proper format, you still need to "Manually Load/Read" the file into the program you are using...

Just copying the MCH files to the program's folder is not enough, the program does not search the installed folder for MCH Files, nor will it load them for you automatically...

5328. Wanted PCR-1000

Yahoo group: PCR1000
Date: 2008-10-22 09:33:03 UTC
From: Paul Dransfield
Topic: 5328 Message: 5328

Anyone in the UK have a pcr1000 they are not using any more?

Condition not important. as long as it works. Software not required not even the antenna. Cable would be useful tho not essential

Please send me an email or reply to this message.

TIA.

Paul

From: Mark J Culross
Topic: 5341 Message: 5342

xradionut:

I searched for "PCR1000 commands" & found the following (this is specifically
from http://roderickmann.org/stuff/PCR-1000%20commands.txt):

EEPROM UNLOCKING

Don't play with these unless you have a verified backup of your own PCR-1000 EEPROM
contents

You need to unlock the protection even to READ the EEPROM contents.

The Unlock Codes are:
GC01
GCF0

Note the response to both the above commands is G001

Read Command:
LD0xx? xx= eeprom address 00 to 7F
Replies LD0xxyy yy = data in location xx

Write Command:
LD0xxyy xx = address yy = data to write
Replies G000 if OK

To put protection back on again turn the PCR-1000 off and on again.
Use the software command H100 or the switch.
The baud rate will then return to 9600.

Good luck & BE CAREFUL !!

Mark J Culross

Date: 2009-01-11 03:29:16 UTC
From: Jay
Topic: 5344 Message: 5344

TrunkPCR version 0.89.242 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

This update has a few Additions, Changes and fixes...

NOTE: Moto Type-I Support should be finished in the next major update.

Feb 04,2008 - Fixed: Import Bank Showing "Read-Only Property" Error.
Feb 05,2008 - Fixed: Editing RadioID from Affiliation List.
Feb 05,2008 - Fixed: Editing Fonts for RadioID's.
Feb 08,2008 - Fixed: Reduced COM Ports to 16 (Max Supported by MS COM
Control).
Feb 09,2008 - Added: Speed Governor on Knob Controls.
Feb 19,2008 - Fixed: Reading Registry Items in Vista 64 Bit OS.
Feb 20,2008 - Fixed: Naming of Search Limt Bank after Inserting New Entry.
Feb 20,2008 - Fixed: Search Limt Bank Tab's Caption after Renaming
Description.
Feb 21,2008 - Added: Skip Known Frequencies in Search Limit Scan Banks.
Feb 22,2008 - Added: Search Limit - Saved Channels to Known Frequencies.
Feb 22,2008 - Fixed: Sub Receiver's "Increment Frequency" using Limit
Search.
Feb 22,2008 - -----: Changed how Search Limit Results are saved.
Feb 22,2008 - -----: Known Frequencies are now ReLoaded after a channel is
deleted.
Mar 02,2008 - Fixed: Setting Search Limit Tab descriptions when Loading a
Different Profile.
Mar 14,2008 - Added: Importing Other Radio Formats now include
Volume,Squelch,IF Shift settings.
Mar 22,2008 - Added: LTR Decoding (Not decoding 100% yet).
Apr 05,2008 - Added: Auto-Connect at Startup.
Apr 06,2008 - Added: Saving BandScope's Follow Active Freqs & Identify Known
Freqs settings.
Apr 06,2008 - -----: BandScope's Follow Active Freqs & Identify Known Freqs
settings Set at Startup.
Apr 06,2008 - -----: Importing Corrected Talkpcr Fql files.
Apr 12,2008 - Added: AFC, AGC, ATTN, NB, VSC and DSP settings Saved for each
Channel.
Apr 13,2008 - Added: Channel Display Grid that allows editing of channel
settings.
Apr 16,2008 - -----: AFC Menu now only enabled in 6kHz/15kHz FM.
Apr 18,2008 - Added: Duplex Offset Frequency setting for All Channels.
Apr 18,2008 - Fixed: Windows Height Adjustment for Vista PC's.
Apr 25,2008 - Fixed: Bank Info Saved when Channel Lock-Out is changed.
Apr 25,2008 - Added: Display of AFC, AGC, ATTN, NB and VSC settings in
StatusBar.
Jul 25,2008 - -----: Changed how the Control Channel Activity Window is

created.
Jul 25,2008 - Fixed: Keyboard shortcuts now work when CCA Window is displayed.
Jul 31,2008 - Added: Running History of Group Calls.
Jul 31,2008 - Added: Running History of Radio Affiliations.
Jul 31,2008 - -----: Inactive Frequencies now cleared when not in use for 5 seconds.
Jul 31,2008 - -----: Inactive Patches now cleared when not in use for 5 seconds.
Jul 31,2008 - Fixed: Faulty display of "Radio Unknown" Decription.
Aug 10,2008 - Fixed: Channel Hit Counter for PCR-1500 & 2500's main receiver.
Aug 10,2008 - Fixed: When De-Activating a TrunkBank, the User Picture is only hidden if the TrunkBank was active.
Nov 26,2008 - Fixed: Group Alerts now display correct Group Color.
Nov 26,2008 - Added: Abort Alerts on Group Alert Display.
Dec 02,2008 - Added: Running History of Active Control Channel Use.
Dec 06,2008 - Added: Inactive Frequency and Patch TimeOuts in Trunk Settings.
Dec 07,2008 - Added: Abort Alerts on Radio Alert Display.
Jan 03,2008 - Added: Find and Replace for Group/Radio Description in Affiliation List.
Version 0.89.242 Released 01/09/2009

Regards,
Jay

5345. 10.7MHz IF bandwidth

Hi Gary,

There's at least one Murata 230KHz filter in there because I've changed mine to a 110 to improve the selectivity and sensitivity on wide modes. Even if you intend doing it for the same reason don't expect a DX machine at the end of it, it's OK but there's not enough of them to give decent slopes on the bandwidth. Mine is located about 500m from a medium power B2 relay and it needs the pad in to stop the overloading. If you want to try mine out it's online at http://www.ukdx.org.uk/tv/tuner.htm

From memory there's also a Murata 53kHz filter in it too but I can't remember if it's for wide modes or not, it may have something to do with the 50K width in narrow modes.

Paul

Hi Paul, the IF tap mod I have seen is before all the murata
filters... well so I thought

reason I asked is I thought I heard of some people using things like
the AOR spectrum scope etc and quoting 10MHz (+ - 5MHz) IF bandwidth...

5349. PCR1000 questions

Yahoo group: PCR1000
Date: 2009-01-17 14:12:51 UTC
From: kb3elt
Topic: 5349 Message: 5349

Greetings all!

I just picked up a used PCR1000 on ebay a few days ago. I've been playing around with it being hooked up to a wide band discone antenna and am getting less than stellar results. I'm curious to see what others opinions are, etc..

I've been comparing the receive of a few frequencies between 2 ham HT's I own and the PCR1000 and have found most signals which get me an s9+ on the HT's get me about and s3 on the PCR. Keep in mind I'm using the same discone antenna and cable.

Are there any tricks I should be looking into to increase it's sensitivity or is there a possibility there is a problem with the radio?

Thanks,

Jeff

Jeff,

One thing you might consider is looking for the calibration routines.
Their was a problem with the cal/tuning data in the eeprom, more in how
the storage of the data would get corrupted. If I recall the program you
need is EX2099, and a handfull of some test equipment. Jeff contact me
off list if you run into troubles finding the information, and I'll see if
I can find the archive of notes I have on it.

The calibration program is in the files folder of this group.

If you can get a steady carrier, like an amateur repeater, you can easily tune the pcr1000 filters for that band.

If a recall correctly it was a slide bar you adjusted to get the strongest reading on a signal meter in the program. It wasn't more complicated than that.

You can always save the current tune data and write it back to the pcr1000 if you think you made things worse.

Ubbe.

There are a few items to note, however when tuning using a fixed carrier from a single source;

You could potentially align the reciever to be optimal only on that particular frequency. If possible, obtain the use of a quality wide frequency signal generator, (one preferably with SSB, (upper and lower) A.M., and F.M.. Tuned properly, the PCR1K is a really decent reciever. (I've access to that type of equipment, but, if you don't, then search for as many different types of signals of good level and use an attenuator inline to have comprable performance characteristics.)

In the D.C. area, there's an Iridium standard that is used to syncronize various microwave backbones, and it's rock solid. It syncs itself to the downlink of the GPS recievers so it's constant.

My 2 cents.

Dave

The service manual text is also in the files area. You click on calibrate, select manual tune, and then tune the nearest frequency/frequencies to best reception. That's it. If you think it got worse on other frequencies you only have to read back the stored file that you always should have before changing anything.

The PCR1000 where prone to loosing it's memory including tuning data, presumably from badly written softwares, the Bonito program have been mentioned, and you then could download a saved file from someone elses PCR1000 which gave same life back to it but tuning where of course far from spot on.

If you suspect that your PCR1000 isn't as good as it should be, someone might have written a foreign tuning file to it, either deliberately or by misstake. To get everything set up correctly again you'll need to tune each and every tuning point but choosing selected frequencybands where you have a carrier to tune against should be ok until you find someone that can help you with the instrumentation.

There are a few items to note, however when tuning using a fixed carrier from a single source;
You could potentially align the reciever to be optimal only on that particular frequency.

5354. Deaf on LW/MW bands

Yahoo group: PCR1000
Date: 2009-01-24 10:40:57 UTC
From: Bistromat
Topic: 5354 Message: 5354

Hi there,

My PCR1000 is completely deaf below 1.8MHz. Using a signal generator, I can set up a S9 +20 signal at 1.8MHz and listen for the sidetone in CW mode. If I move it to 1.799999MHz, it goes dead. I still get static, and I still get birdies here and there, but no signal. Nothing coming in on the AM broadcast band, either.

I checked D6 after hearing that those MA77 diodes can go bad. It's still good. I also made sure the band switching signal (4.8V at C18) is OK. Where else should I look? Is the PCR1000 just really deaf in its lowest band?

Thanks,
Nick

Those 1SV307's & MA77's diodes can actually work at VHF UHF frequencies
and at the same time actually fail or become marginal at HF frequencies.

A multimeter with the diode test function should single out the shorted
ones but I have seen some marginal that check good but are actually bad
under use in the circuit.

I had to inject the RF signal downstream of the diodes to isolate my
problem.

I've seen these fail too, but in different systems and not in the Icom PCR1K. With that said, however, care must be

taken to not damage a potentially good diode when checking with the diode test function on the multimeter.

Some of the probe voltages can actually damage adjacent I.C.'s that are not as robust as the diode under test.

A model 77 Fluke multimeter has good specifications for that use. Under no circumstances should you use

a Huntron Tracker 1K for the trace function test. Although the trace looks cool, the voltages present at the probes

even on the low setting can accidentally turn-on other junctions in the other circuits. Just a word from one who

just spent $100.00 in parts to replace a few I.C.'s and a couple of these same diodes. (I did it myself-I didn't want

Sony going bugnuts on the modifications I made to the original reciever..)

Topic: 5354 Message: 5357

Thanks for the help, Ed! I spent some quality time injecting signal into the front end, and ended up confusing myself even more. Actually, I can't tell how this thing is supposed to work in the first place!

The problem centers around D36. In band B0 (that is, below 1.8MHz), it appears to be reverse-biased, so signal can't get through. It's reverse-biased because Q81 holds the cathodes of D36 at 5.9V through L61. Q81 is fed by the diode-OR'ed combo of B0, B1, B2, and B3. So in band B0, Q81 holds D36 in reverse bias, and so signal can't get through. I verified this by removing R74, which applies bias to the cathode of D36. As expected, B1, B2, and B3 don't work, but B0 works great now! Actually, I'm very happy with the sensitivity and selectivity on AM broadcast. Next, I lifted the B0 input to Q81, so it doesn't apply bias in band B0. Now it works across all bands! But why should I have to modify the radio from stock to make it work?

Aaaaaaah. Got it. The schematic is wrong. In real life, B0 doesn't connect to diode D34, which is the diode-OR. It does on the schematic, but on the board there's an unpopulated zero-ohm resistor that blocks the signal. The problem was in Q5, which was shorted and holding the B3 signal high, which turned on the preamp and kept D36 reverse-biased.

Man, debugging is harder when the schematics are wrong. Thanks again for your help!

Glad you found it! Don't you love it when there are revisions to schematics?

(Especially when you go looking for the latest and greatest drafts only to find that

they are no better than the original release?)

Dave

5359. PCR1K with Ham Radio Delux

Yahoo group: PCR1000
Date: 2009-01-25 14:16:59 UTC
From: ns1z
Topic: 5359 Message: 5359

I would like to use the PCR1K with HRD in the satellite mode. This would provide automatic doppler and allow my other two hands to control the rotor and log stations. Anyone doing this? Spedifically, I am confused about how to adjust the volume and squelch of the PCR1K while using HRD. Any help?

5360. Re: Deaf on LW/MW bands

Yahoo group: PCR1000
Date: 2009-01-25 22:16:50 UTC
From: n4umj
Topic: 5354 Message: 5360

Hello Nick,

Your welcome although I think you did all the hard work sorting out an incorrect schematic! Q5 must have been a tight fit on the desolder/replacement with it sitting right beside(just about under) the L61 coil!

I have found out that the parts don't fail in a domino pattern as you think they would from the antenna jack inward. I have repaired several PCR1000's from static damage and each is different in the parts I replace.

On the circuit revision.....

I find the disclaimer amusing that is now on some recent ICOM Service Manuals that states: "To upgrade Quality, any electrical or mechanical parts and internal circuits are subject to change without notice or obligation"

I wonder how that affects the FCC records? I sure would like to have acccess to the notes on the circuit revisions but from what I hear this may be limited to authorized service centers.

As for another area of the PCR1000 circuitry that I have found that does not agree with the schematics are those components around IC-12 on page 9-4. Never had to replace anything there but got confused of course.

I don't use GPS but I have heard even those fancy navigating GPS units are wrong on occasion so it's a dangerous world out there for those wanting 100% certainty in navigating---whether it be a circuit board or a highway!

I have exercised the "white out" and inserted the 0 ohm jumper portion for Band "0" on my schematics!

Take care,
Ed

Ed, seeing as how you've repaired several PCR1000s with static damage, maybe you have some insight as to why mine is still not particularly sensitive. I replaced that pesky diode and everything seems OK below 1.8MHz now, but my sensitivity measurements are getting me down.

My good old HP 8656B signal generator tells me that the power to get 10dB SINAD on this receiver (FM, 15kHz) is about -106dBm, plus or minus a few dBm across the bands. That, to put it bluntly, ain't so great. Supposedly this RX should be able to get near -126dBm, so I'm missing 20dB!

I believe the previous owner tried to repair it by flashing it with a downloaded ROM. The data in the EEPROM was identical to the data in the sample ROM downloaded with EX-2099. So, after alignment it works quite a bit better, but it's still rather deaf. In your experience, does the preamplifier Q12 often fail? What about the attenuator switching diodes? The voltages all seem OK when checked with a DMM but I haven't subjected them to any sort of RF test.

Would it be possible for me to get a copy of your (or anyone else's) working ROM for me to look at? I'd like to see where other receivers' S0 measurements fall, so I can try to tell where mine differs.

Thanks,
Nick

Hello Nick,

You mentioned finding Q5 shorted. Did you check the dual diode D3? If a surge took out Q5 it probably traveled through D3.

Are all bands down 20 db? Be sure to check the AGC line as I had one that got damaged all the way back into that circuitry. D87, Q89 and Q88 will affect a wide range if sorted or open(I found mine shorted.)

IC-4 can fail but it usually is all or nothing. I have never seen a Q12 fail so far but there's always the first.

The short gray coax jumper from the BNC to the board should be good but a flashover(pinch through) from a high voltage surge could have damaged it. Something to ohm out and look for infinity resistance.

I bet it's still a hardware failure unless the EEPROM image was way out of kilter. I can't officially comment on using the EX-2099 as it's supposed to be only for dealer usage which I am not.

I think that the trunkPCR program has a fine tune of some sort that will do part of the same alignments.

I have used the BackPCR to examine the EEPROM values and do a comparison between a good image and bad image. I have found ones with "00" in the corrupted areas creating problems. Some are supposed to be though.....

Of course be certain that your reference frequency is on center. I use the PCRBUR in the files section to do this.

I sent you some EEPROM data values I had in a file so that may help you out. You may need to convert these to hex or decimal depending on what you program are using to view these values.

Good Luck!
Ed

Hi...

I can't get my PCR1000 to connect to HRD. Can someone give me the proper settings? I know the PCR1000 is in the HRD database of supported radios; however, when I try to set it up, it won't connect. Any ideas?

From: JW
Topic: 3057 Message: 5366

What I did with mine was to select "connect" which disconnected me from the main rig. I then specified the port and receiver and HRD did the rest. It was pretty much auto magic...

Well it finally happened, the radio quit working. All I get is a rushing noise out of the speaker. The sounds change if I change the bandwidth and a few other things. I am hearing that it needs to go back to the factory for repair. Is there anyone in the Mid-Atlantic area that works on these things? Any help would be appreciated.
Thanks, Ben

5368. PSU for pcr1000

Hi all

Just received a pcr1000 today. 2 things.
What is the power requirements? I had one some time back and can't remember what it is. I got a 5v with it which I recon is incorrect.

If this is the case has anyone in the UK got one going spare?

Kind regards

Paul D

Use any good quality power supply - preferably regulated.
12 to 14 Volts at 1 Amp or so would be ideal.
5 Volts is ridiculous.

Hope yours works :-)
Fred.

What Frequencys do you want to receive? i.e. 144mhz will be 2 meters.
General coverage 300k-30mhz just 50 coax to a 20 ft wire antenna is ok.
Get/build a general multiband "coil trap" for SWL/BCB am use. Bill

Howdy!

For HF you may want to search on eBay for a "40/15 Meter Dipole Antenna, Inverted V" under current items for sale and completed sales... I see one on sale now for $22 plus shipping.

Understand that RF is almost like rain... it can land almost anywhere and the long length of wire offers plenty of reception area. This is the reason I recommended the inverted V. The 40 meter or 20 'meter dipole 1/2 wave base station ham radio antenna' is another good choice. Both can be found on eBay.

Also understand that most transmissions 26 MHz and above are vertically polarized. Below that most are horizontally polarized. Now I know some purist will object to this broad-brush statement, but for the most part, it's true... and yes, there ARE exceptions.

Of course, a tuned antenna system (antenna tuner and band-specific antenna or multi-band antenna) requires more gear and becomes a more "selective" antenna ~ "optimized" for a specific band(s). But this is NOT to say that a antenna system 'tuned' to 15 meters will not hear anything on 20 meters or 80 meters. It just transmits and receives best at 15 meters if the antenna system is optimized there.

For frequencies above check out the MFJ 1868 - New - Discone Antenna - 25-1300 MHz. This outstanding antenna is a real performer, but understand that because of it's nature, this antenna offers NO gain, but the benefit is the huge bandwidth! On eBay now for about $60.

Please note at these frequencies quality coax is highly recommended. RG-213 is a very good choice, but always keep the length down to a minimum! Unless you have experience, I recommend coax that already has the connectors soldered on.

Be very careful about pre-amps. While many can boast lots of "gain", many times the internal "noise" from the internal transistors or other solid state devices will generate LOTS of internal 'noise'. Very often that noise can blanket or bury most weak transmissions.

Hope this helps!
Anthony

Paul,

I think I can help. I have developed a PCR Controller application. I am sure I can make an add-on to do exactly what you ask, as I also have a FRG-100 Controller which does.

Have a look here:

http://pagesperso-orange.fr/frans.vink/

I am sure we can work out something, if you specify a bit further what the requirements are. Second point: I hope you're not in a hurry, because in summertime I don't spend a lot of time programming etc, more autumn, winter work. :-)

Let me know what you think,

Frans

Subject: Re: [PCR1000] Auto Tuning for PCR 1000

Paul:

You can take a look at my PcrMC program which I've attached as a ZIP file here (it is also available in the PCR1000 files section).

Per your request, I should be able to fairly quickly add a new command (TOD: nnnn) to cause the PCR-1000 to change to newly specified settings at a given time-of-day, using the PC's internal clock as the timebase. I'll let you know when I have an updated version available.

Here's what I usually send out when others have asked about the current verion of PcrMC:

Here is the latest version of the program that I wrote a while ago.
Note that this ZIP file is now also in the PCR1000 files section. It
is FREE, so please give it a try. If you like it, keep on using it. If not,
nothing spent, nothing lost !! The weakest part is the lack of a HELP
file. Instead, I put all of my work into the program itself, and did my
best to make it self-explanatory.

There are actually two executables included in this ZIPfile. The first,
PcrMC.exe is a DOS text-only version . . . it represents my original
program development. Much later in the development cycle, I

decided to implement the same capabilities in a DOS 640x480
graphical version as PcrMC-SA.exe. Both of these run very well
under multiple versions of Windows (Win95, Win98, WinME, Win2K,
WinXP . . . not yet tested in Vista) . . . PcrMC.exe will run either
full-screen or in a DOS window . . . PcrMC-SA.exe will only run
full-screen (Windows restriction).

The basic syntax to run the program is as follows:

   pcrmc[-sa] [-com1 | 2 | 3 | 4] [-fast] [-debug] [filename]

Note that all command-line options are case-insensitive.

[-com1 | 2 | 3 | 4] : you can specify the COM port on the command-
line to override that which is recorded in the PCRMC.INI file.

[-fast] : this will skip the pause on the "HELP" screen as the program
is started up.

[-debug] : this will cause a PCRMC.DBG file to be created that will
contain time-stamped entries for each command sent to the PCR-1000
and each status returned from the PCR-1000. Note that when the
receiver is used as a scanner, this debug file can grow quite large in
time !! Be aware of the disk-space requirements by running this for
a long time.

[filename] : you can specify the "program" file that you'd like
PcrMC to initialize with upon startup (it is not necessary to also specify
the file extension as this is assumed to be .PGM). See some of the
included "program" files for examples of how to make use of the
powerful capabilities within the PCR-1000 that Icom's included
Windows program woefully ignores and/or hides from us !!

Good luck & let me know what you like/dislike. It's been quite awhile
since I worked on it, but updates are not necessarily out of the question.
I definitely still use it all of the time. Even though it works especially
well on very old (DOS-only) PCs (since that is what it was originally
developed for), it works equally well under Windows (see above).

A couple of notes that may prove very useful are as follows:
ALT-H shows a help screen (the closest thing there is to a HELP file !!)
ALT-A goes into "automatic" (demo) mode which will let you exercise
          all of the program features even without your PCR-1000 attached
ALT-P starts/stops "program" mode
ALT-S starts/stops "scan" mode
ALT-Q quit without saving configuration
ALT-X exit & save current configuration

Pressing any of the selection keys (for example, O for mode) will cause
that field to blink, indicating the selection that can be controlled using
the up/down and/or left/right arrow keys to change the selection. Press
the ENTER key to complete the selection for that field.

Frequency information can be entered anytime that no other fields are already active (pressing F first is not absolutely necessary). When entering frequency information, you can also use the backspace key to make corrections. As well, you can use the ESCAPE key prior to hitting the ENTER key in order to discard any frequency changes made and return to the previous frequency setting.

Some keys take effect immediately (typically those that alternate between two settings) such as G for AGC on/off, B for NB on/off, etc. Some keys have multiple functions (but with related control) such as P for bandscope...pressing P once will let you select the bandscope speed...pressing P again while the bandscope selection is active will change the bandscope vertical resolution multiplier.

Feel free to e-mail me if you have any questions, comments, and/or suggestions for improvements.

Have fun !!

One of the ham shops just sold one for $200.00 Between $175 to $225 seems to be the going rate.

Hey Paul,

The latest version of TrunkPCR and PCR Pro can do this :)
You can specify a Bank and Channel to record at differnt times of the day, week or single occurance.
Maybe this could help...

5388. IP1kC v1.2.1 Palm PDA Control

Yahoo group: PCR1000
Date: 2009-07-26 22:16:19 UTC
From: mm0bff
Topic: 5388 Message: 5388

I recently purchased a secondhand IC-PCR1000 followed by a Palm IIIc after seeing JJ's excellent IP1kC app online.
Anyway, I decided to do some tweaking to the IP1kC app, I think another guy did some similar tweaks a few years back.
I have just uploaded the tweaked version IP1kC v1.2.1 to the files section.
The biggest changes are additional 'Guess Mode & Step' for memories (lacking in original version), additional bands and increased scan rate, did some tests here and hopefully the increased scan rate will not interfere with signal detection (Testers?). The rest of the changes are purely visual/layout.
Many thanks to JJ for releasing the source!
App was recompiled on Linux using GCC, Palm SDK and prc-tools, tested on a Palm IIIc running Palm OS v3.5.

Changelog for IP1kC v1.2.1:
- Added additional 'Guess Mode & Tuning Step', this does it's best at setting the Memory to the correct Mode & Step. It should pickup CW/SSB portions of the Ham bands (as close as) and SSB for Utilities as well as AM Broadcast Bands.
- Increased scanning rate (at least twice as quick as original).
- Added additional bands, mainly Ham bands.
- Added 4 & 7 seconds Pause in Scan Setup
- 'HOLD SCAN' now the default in Scan Setup
- Increased Tuning Step font and renamed KHz to kHz
- Added 'MHz' label after Frequency readout.
- Renamed 'AFC' to 'VSC' (Voice Scanning Control, as that's what it is, only really effective on SSB for voice squelch)
- Renamed Title to 'IC-PCR1000 Control'
- Renamed Labels on Selectivity/Filters to show 'kHz'
- Renamed Labels on Frequency Up/Dwn buttons'
- Moved Memory Up & Down Buttons to the right
- Moved Band Up & Down Buttons to the right
- Moved VSC (AFC) Label to the left
- Moved AGC Label to the left
- Moved ATT Label to the left
- Moved NB Label to the left
- Moved Scan Button to the Right
- Moved On/Off button to the Left

I appreciate your efforts and am intrigued by how you have accomplished this revision. Can you go into the basics of how you revised the original IP1kC application which I also run on a Palm IIIc. I know very little about writing or revising code so could you throw out some pointers that might get me started or direct me to links that might help. I really love my PCR1000 and have recently been clearing tree limbs overhanging my roof to put up a much nicer broadband antenna.

Best regards,
Dave in mid-Missouri

Hi Dave,

You can program the palm on Linux or Windows (like most languages nowadays), although I actually found it easier to do on Ubuntu using the repository software (thanks to 'apt-get' for saving me from the depths of dependency hell!).
You will need, prc-tools, Palm SDK & the Pilot Resource Compiler.
Prc-Tools 2.3-2 (builds the prc app), the Palm SDK (sdk-5r3, copy to /opt/palmdev when unpacked) you need to get it from the Access Development Network <http://www.accessdevnet.com> where you need to register (free). I also installed PilRC (Pilot resource compiler) v3.2-2.
Thats pretty much it if I remember, you also need GCC ('build-essential' in ubuntu!) although it actually uses m68k-palmos-gcc for the compiling.
No fancy IDE I used 'gedit' and ran 'make' from the command line (sad huh!), luckily JJ made a make file for us!
I also installed 'gpilot' (again from the repos) for syncing it up and sending the app across (gpilot-install-file --now IP1kC.prc).
I think JJ did an excellent job in the first place and to be honest all the changes were my personal choice and there's not much that JJ missed.
The only thing I could see which would be on my next 'tweak list' is the DSP ON/OFF function, unfortunately I don't have a UT-106 so could not implement this.
Major Kudos to JJ for creating the program in the first place.

Once you download and unzip the source from JJ's Site <http://geocities.com/jjintokyo/> there are three files you are 'really' concerned with:
IP1kC.c (Main code!), IP1kC.h (the header file, if you are going to do major changes) and IP1kC.rcp (the resource file, this is how most of the text/buttons etc appear in the program) all editable via your favorite ascii editor (ideally colour coded to save the eyes).
You can also get Emulators to test the interface out on without even hooking up your Palm.
Anyone who really wants to get their hands dirty can refer to the Palm OS API <http://www.accessdevnet.com/docs/palmos/PalmOSReference/Control.html> .
The Icom command list for the PCR1000 is on this site...I think.

The App was recompiled on Ubuntu 9.04 using GCC (m68k-palmos-gcc), Palm SDK (5r3) and prc-tools (2.3.2), tested on a Palm IIIc running Palm OS v3.5.

Here are some PalmOS development pointers (There are loads!):
Linux: http://www.shallowsky.com/linux/palmlinuxdev.html <http://www.shallowsky.com/linux/palmlinuxdev.html>

Windows: http://www.poplarware.com/palmdev.html
<http://www.poplarware.com/palmdev.html>

The battery life on the Palm IIIc is amazing, a way ahead of it's time IMHO, mainly because of the screen save feature (I have only charged it twice since getting it over three weeks ago (I suspect mono screens are even lighter on the power?).
Dave, Have you tried out the scanning yet...not sure how well it's working after I tweaked it (Feedback?). [:)]
All great fun.
73!

Thanks so much for all the tips and pointers. It may take me awhile
to work it in with other interests but I have already started putting
together the details of what I need to learn and collecting the info
that will get me there. This is just for my fun and you have given me
a great start.

What I would like to eventually have is a logger built into the IP1kC
software. I am not a ham but I do tremendously enjoy SWL and I
like to note the facts of an unusual reception. There is a nice little
Palm program available called HFlog which I have used and some-
thing similar to that would be perfect.

As I spend more time with your revision, that is when I get the time
(there's that again), I will provide some feedback to you. Thanks
again.

Will it ever stop raining? Can I ever stop mowing?
Best regards,
Dave in the mid-Mo jungle

5394. PCR-1000 For Sale

Yahoo group: PCR1000
Date: 2009-08-20 18:58:17 UTC
From: matt_buck13
Topic: 1315 Message: 5394

Hey Everybody-

I have a PCR-1000 with the DSP (UT-106) that I am going to offer for sale. The DSP unit was professionally installed by Universal Radio and the case has not been opened since.

I purchased it while living overseas so it is unblocked (0.01-1300 MHz, continuous) and in excellent condition. It works great but I just don't have the expertise to use it to its fullest capabilities. It really is an amazing piece of equipment.

I have the original AC adapter and antenna. I also have a serial cord (RS-232C) that I use with it. It will also come with the Bonito RadioCom software and the original software (that came with it) as well as a 1/8-1/8" audio cord.

Make me an offer. I'll only consider sales to US addresses via PayPal. I'm happy to answer any questions or provide pics to anyone interested. Feel free to email me (matt_buck13@...).

Thanks.

5396. PC Controled Preselector for the PCR1000

Yahoo group: PCR1000

From: oz7aff
Topic: 5396 Message: 5396

Hello

I think it is common accepted that below 30 MHz
the PCR1000 does need a preselector.

Has enybody tried to make a preselector for
it that can be controled by PC ?

Topic: 5396 Message: 5397

Good idea!
I have my PIC controller for PCR1000, see
http://www.i0cg.com/control_panel_for_pcr1000.htm
and also a general coverage preselector for my SDRx receiver, see
http://www.i0cg.com/sdr-x.htm
Can be easy to assemble Control panel and Preselector together.
Note that, with this panel, PC isn't required
My preselector can be driven from PC parellel port also (with a special DLL)
regards
Giuliano I0CG

Hi

PC controlled Preselector?

USB 2.0 compliant, SDR compatible, and complete receiver front end?

A brick wall filter that attenuates spurious signals from AM broadcasters by

as much as 120 dB ?

Does the idea of protecting the "front-end" of PCR-1000s etc spring to mind ?

Preamplifier and Step Attenuators.

I found them to, but the SCR Preselector is im my
opinion a little over kill, it cost the same as
two PCR1000.

The other project they offer as a kit seems more
like the right thing:

http://www.m0wwa.co.uk/page/tiny/tiny_SCR_preselector.html

The price is also more right to me.

5403. A couple of questions..... (If I may)

Yahoo group: PCR1000
Date: 2009-10-08 14:39:03 UTC
From: Dave
Topic: 5403 Message: 5403

Hi All..

A question for the group in general.

Has anyone got, or know of, a .ini file (driver) for "OmniRig", the rig interface program by Alex VE3NEA, as used by Faros (same author) the HF beacon monitoring program, among others. If so, would they be willing to share it for the greater good of Hamdom?

See http://www.dxatlas.com/omnirig/ for details, and a link to the Faros page.

Or, does anyone know if any of the existing PCR-1000 control programs for this receiver (Windows based) can themselves be "remotely" controled, by whatever means. Be that using virtual nullmodems and com ports, TCP/IP on Localhost, or any of the usual Windows inter-program communication systems?

A question for any group members in the UK.

Does anyone have a PCR-1000 I could borrow? Even a sick one (so long as the serial I/O works OK) so I can put together and test such a driver file? Costs would be covered of course, and if I broke it, I'd buy it! (I am aware of the EEPROM issues!)

I'm trying to help a PCR-1000 owner, who wishes to use it with the Faros program, for automatic monitoring of the NCDXF HF beacon network. Look here for details of the beacon network.
http://www.ncdxf.org/beacons.html

If you click the Monitor Stations link top left, you'll see (among others) a link to my monitoring stations status page.

Comments? Bouquets? Brickbats? Or shall I just get my coat and leave quietly now?

Cheers All.

Dave G0WBX.

A question for any group members in the UK.

Does anyone have a PCR-1000 I could borrow? Even a sick one (so long as the serial I/O works OK) so I can put together and test such a driver file? Costs would be covered of course, and if I broke it, I'd buy it! (I am aware of the EEPROM issues!)

I'm trying to help a PCR-1000 owner, who wishes to use it with the Faros program, for automatic monitoring of the NCDXF HF beacon network. Look here for details of the beacon network.
http://www.ncdxf.org/beacons.html

If you click the Monitor Stations link top left, you'll see (among others) a link to my monitoring stations status page.

Comments? Bouquets? Brickbats? Or shall I just get my coat and leave quietly now?

Cheers All.

Dave G0WBX.

Thanks Tom.

I know HRD, and I have a contact route for Simon (it's author) too, "but sledgehammer to crack a nut" springs to mind, but it's one option perhaps.

I'll take a look at the other too.

Thanks again.

Subject: [PCR1000] A couple of questions..... (If I may)

Hi All..

A question for the group in general.

Has anyone got, or know of, a .ini file (driver) for "OmniRig", the rig interface program by Alex VE3NEA, as used by Faros (same author) the HF beacon monitoring program, among others. If so, would they be willing to share it for the greater good of Hamdom?

See http://www.dxatlas.com/omnirig/ for details, and a link to the Faros page.

Or, does anyone know if any of the existing PCR-1000 control programs for this receiver (Windows based) can themselves be "remotely" controled, by whatever means. Be that using virtual nullmodems and com ports, TCP/IP on Localhost, or any of the usual Windows inter-program communication systems?

A question for any group members in the UK.

Does anyone have a PCR-1000 I could borrow? Even a sick one (so long as the serial I/O works OK) so I can put together and test such a driver file? Costs would be covered of course, and if I broke it, I'd buy it! (I am aware of the EEPROM issues!)

I bought the pro version From davee.com ($)10) paypal .
I can record audio fine. sound card input from radio.
But I would like to get the frequency to show on the recorder.
I setup the Radio comm port address but still no luck.
Has any one got This to work? Thanks - Bill Hayes

From: Paul D
Topic: 5410 Message: 5410

Hello all

I am having issues with the PCR1000 I have.

I am part of Globaltuners.com, and they have been able to help me with giving me their version of the eeprom, however this does not help.
Has anyone got a version of eeprom that came originally with the PCR1000?
or
Perhaps someone in the UK can take a look at my PCR1000 and tell me the problem with it. I admit, I am only using it with a discone currently, but I am having big issues with Aviation (VHF). I know it is not the antenna as the same frequencies work perfectly on a different receiver.
I am hoping that someone can help me with this, as I would like to get to use this properly again.
Many thanks

Paul D

Hi Julian.

Damb! I was up Derbyshire (I think that's the area you are in, from various web hits on your call) way this last weekend with some friends, exploring the countryside, awsome has to be said. Anyway, thanks for the offer, the only one so far, much appreciated. If not Derbyshire, whereabout's in the UK, before we get too many logistics in the way. I had come accross the global tuners site before, or another like it, but forgotten such things were there. Will have to play some time, and/or make something available from North Bucks.

Thanks for the mail.

Regards.

Dave G0WBX.

Dave:

Wow, I wish I know someone who could "give" me PCR-1000s !!

Here is the latest version of the program that I wrote a while ago.
Note that this ZIP file is now also in the PCR1000 files section. It
is FREE, so please give it a try. If you like it, keep on using it. If not,
nothing spent, nothing lost !! The weakest part is the lack of a HELP
file. Instead, I put all of my work into the program itself, and did my
best to make it self-explanatory.

There are actually two executables included in this ZIPfile. The first,
PcrMC.exe is a DOS text-only version . . . it represents my original
program development. Much later in the development cycle, I
decided to implement the same capabilities in a DOS 640x480
graphical version as PcrMC-SA.exe. Both of these run very well
under multiple versions of Windows (Win95, Win98, WinME, Win2K,
WinXP . . . not yet tested in Vista) . . . PcrMC.exe will run either
full-screen or in a DOS window . . . PcrMC-SA.exe will only run
full-screen (Windows restriction).

The basic syntax to run the program is as follows:

   pcrmc[-sa] [-com1 | 2 | 3 | 4] [-fast] [-debug] [filename]

Note that all command-line options are case-insensitive.

[-com1 | 2 | 3 | 4] : you can specify the COM port on the command-
line to override that which is recorded in the PCRMC.INI file.

[-fast] : this will skip the pause on the "HELP" screen as the program
is started up.

[-debug] : this will cause a PCRMC.DBG file to be created that will
contain time-stamped entries for each command sent to the PCR-1000
and each status returned from the PCR-1000. Note that when the
receiver is used as a scanner, this debug file can grow quite large in
time !! Be aware of the disk-space requirements by running this for
a long time.

[filename] : you can specify the "program" file that you'd like
PcrMC to initialize with upon startup (it is not necessary to also specify
the file extension as this is assumed to be .PGM). See some of the
included "program" files for examples of how to make use of the
powerful capabilities within the PCR-1000 that Icom's included
Windows program woefully ignores and/or hides from us !!

Good luck & let me know what you like/dislike. It's been quite awhile since I worked on it, but updates are not necessarily out of the question. I definitely still use it all of the time. Even though it works especially well on very old (DOS-only) PCs (since that is what it was originally developed for), it works equally well under Windows (see above).

A couple of notes that may prove very useful are as follows:
ALT-H shows a help screen (the closest thing there is to a HELP file !!)
ALT-A goes into "automatic" (demo) mode which will let you exercise
          all of the program features even without your PCR-1000 attached
ALT-P starts/stops "program" mode
ALT-S starts/stops "scan" mode
ALT-Q quit without saving configuration
ALT-X exit & save current configuration

Pressing any of the selection keys (for example, O for mode) will cause that field to blink, indicating the selection that can be controlled using the up/down and/or left/right arrow keys to change the selection. Press the ENTER key to complete the selection for that field.

Frequency information can be entered anytime that no other fields are already active (pressing F first is not absolutely necessary). When entering frequency information, you can also use the backspace key to make corrections. As well, you can use the ESCAPE key prior to hitting the ENTER key in order to discard any frequency changes made and return to the previous frequency setting.

Some keys take effect immediately (typically those that alternate between two settings) such as G for AGC on/off, B for NB on/off, etc. Some keys have multiple functions (but with related control) such as P for bandscope...pressing P once will let you select the bandscope speed...pressing P again while the bandscope selection is active will change the bandscope vertical resolution multiplier.

Feel free to e-mail me if you have any questions, comments, and/or suggestions for improvements.

Have fun !!

5418. PCR Pro version 1.14.259 Now Available

Yahoo group: PCR1000
Date: 2009-10-19 06:13:55 UTC
From: Jay
Topic: 5418 Message: 5418

PCR Pro version 1.14.259 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has a few Additions, Changes and fixes...

Jul 19,2009 - Added: ByPass External Speaker Plug-In Notification for PCR-100 (*** Not Recommended ***).
Jul 31,2009 - Added: New Item under Help Menu, Launch Web Browser to RadioReference.com...
Jul 31,2009 - Fixed: Changing Bank in Timed Recording now wraps to start/max Bank.
Jul 31,2009 - Fixed: Changing Channel in Timed Recording now wraps to start/max Channel.
Jul 20,2009 - Added: When Turning OFF Power Button, a check is now made to see if the COM Port is Still Available.
Aug 10,2009 - Fixed: Timed Recorder Auto Start / Stopping.
Aug 10,2009 - Added: CSV Bank Import.
Aug 11,2009 - -----: Timed Recording can now be stopped by Un-Checking Enable CheckBox.
Aug 11,2009 - -----: Sound Recorder won't be shown if Timed Recording in Progress.
Aug 11,2009 - Added: Delete Wave File Button in Sound Recorder.
Aug 12,2009 - Fixed: Recording Device ID now used when checking WaveFormat in Sound Recorder.
Sep 28,2009 - -----: Changed two Scan Status Indicator Colors so that CTCSS Tone isn't mistaken as activated.
Oct 16,2009 - Fixed: Links to Homepage updated to correct URL's.
Oct 16,2009 - Fixed: DTCS Tone Squelch now only enabled for PCR-1500/2500's.
Oct 17,2009 - Fixed: Mode Buttons in Serach Bank Editor now Enabled for PCR's ability.
Oct 17,2009 - Added: Serach Bank Editor's Window Position now Saved.
Oct 17,2009 - -----: BandScope MenuItems moved to BandScope Window.
Oct 18,2009 - -----: Freq Button now Selected when Quick Channel Button or Search Bank Button is clicked.
Oct 18,2009 - -----: Chan Button now Disbled when a Quick Channel Button or Search Bank Button is clicked.
Version 1.14.259 Released 10/18/2009

Regards,
Jay

It depends a lot, on what you want to listen to. LF, HF, V/UHF?

How much space do you have at the home, and what sort of boat?
Sail/power etc.

Cheers.

Dave G0WBX.

5423. Front end overload

Yahoo group: PCR1000
Date: 2009-10-26 01:15:44 UTC
From: Ben
Topic: 56 Message: 5423

I am using the PCR-1000 with tow antennas. The first is a 30 foot tall, ground mounted, vertical military antenna and the performance is pretty good. The second is a 65 foot longwire about 25 feet off the ground. when I use the long wire I get a lot of overload. I am getting amateur radio in the 5 and 6 mHz bands and a whole slew of AM broadcast stations below 5 mHz. Is anyone else experiencing this problem? If you are what are you doing about it other than using the built in attenuator or decreasing the antenna?

There are limitations to what the receiver can reject.
Google Preselectors and circuits - and consider some front-end protection too.
Winter approaches and Static in falling snow can be literally shocking.

Regards,

Fred.

That'll be amateur at 5MHz, and pirates at 6MHz then. :-)

As to suspected overloaded front ends. First hit, put a simple
attenuator in line, 10dB for example.

If what you are listening too is reduced considreably (many 'S' points)
or goes away compleatly, then it is likely to be an overload (intermod)
product. If it just drops a 'S' point or two, then it's probably real.
1 'S' point is about 6dB,

I say 'about' as most RX's are not that accurate in that department,
unless you have a profesional measuring RX, at many 10's of 1000's of
sheckels cost.

A preselector may help, but not much if at all, if what is overloading
your front end, is close to what you want to receive, such as 40m dxing,
in the presence of moster chinese broadcast stations that are still
there.

Regards.

Dave Baxter.

5429. Reading back the IC-PCR1000 current working frequency (+ mode, filter etc)

Yahoo group: PCR1000
Date: 2009-10-29 15:49:02 UTC
From: Dave Baxter
Topic: 5426 Message: 5429

Hi All...

Does anyone have any info, if it is at all possible to read out (from the IC-PCR1000) what frequency it is currently tuned to? Same with what mode and filter is set too would be good.

I've got several copies of various documents where people have deciphered the PCR<>PC control link, and none of them show anything about being able to read back what frequency, mode, filter setting etc is in force at any one time.

The 'K0GMMMKKKHHHmmff00' command is well documented as to "setting" it's frequency, mode, and filter settings. But trying a query of 'K0?' Returns nothing of any use, only a command good status message! (odd!)

I need this, so I can make Faros (http://www.dxatlas.com/faros/) via OmniRig (both by Alex VE3NEA) work correctly. As Faros needs to read the working frequency from the radio, to confirm it was set correctly, before it will do it's DSP stuff and detect any beacons!

Any answers out there?

Best Regards...

Dave G0WBX.

PS: Using a serial port intercept and monitor program ("Bill Serial Monitor", truly magic) I find that it is not necessary to send a cr/lf pair at the end of a command or query.

In fact, a more reliable "recipe" seems to be, if you are issuing a "Command", that is something that makes a change to a setting, you need to send a single 'lf' as the terminator. The radio will then echo that 'lf', send the command success/failure message (G000 or G001) then a cr/lf pair.

If you are issuing a query such as H1? You do not need any 'lf', 'cr', or whatever on the end, the '?' seems to act as the terminator itself. The radio then sends a single 'lf', the data you asked for ('H101' for example) then a cr/lf pair.

. -. -..

Hi Dave,

The PCR's don't keep the last tuned frequency, mode or filter saved in memory. It's up to the software to save this on exit and restore when re-ran...

Jay

5432. Remote control via a webpage

Yahoo group: PCR1000
Date: 2009-11-09 20:47:34 UTC
From: Matt
Topic: 5432 Message: 5432

Does anyone know of a way to remote control the receiver via a web page? I would like to add remote control of my PCR1000 to my website.

Thanks,

Matthew

Interesting, and thanks for the links.

Both look like good ideas, but also both are definately in the Windows Bloatware class of program sadly, what with .NET and SQL database systems needed. Also, the documentation (again) for each is a bit thin for first time users. I can see many people trying to set these up, and failing miserably, due to some missing info relating to the needed support packages, or updates therin (.NET especialy!) And why not support users of Win2000? XP is only 2k with bells on, and many many hams have Win2k PC's that are still perfectly usable and can be secure. Heck even an old (but with all available updates) Win95 machine behind a modern router/firewall is unlikely to suffer anything bad. (Not imposible, but unlikely)

The comments about Firewall's (especialy ZoneAlarm) are a bit worrying, I can see some people just disabling them to get these things working, and then leaving themselves wide open to the www and it's muppets, if they only have a USB connected DSL modem (or dialup) connection to the web. ZA used to be a favorite tool, but it has grown to include everything including the kitchen sink. However, it can and does still do a good job, also being highly configurable and easy to do so, once you know a few things. To say it's "unsuported" is a bad thing I think. What about users with Comodo or other third party firewall's, or is there somthing to hide (undocumented not to block?) If you're "Realy" creative, you can mess with the network settings in 2k and "roll your own firewall", but it's not for the feint hearted messing in there.

Yes XP has it's own firewall, and it does a fair job. But, it's API is published information, and it is entirely posible (there is malware that already does this) for an app to manipulate the firewall for it's own ends, with no user intervention or notification. If you use another firewall, disable XP's own, having two (or more) on one PC is counter productive.

The remote control issue is not that dificult, with programs like Eterlogic's VSPE tool, you can "remote" a com port anwhere you want, on your LAN, or other side of the planet.

Audio remoting is not dificult either, about the best for that is IP-Sound, but you'll find that dificult to find these days, as sadly it's author has cast it adrift. There was also a version that would also remote a com port too. Skype works very well too! (And there might be posibilities of remote control via it's text messaging service.)

HRD is about the defacto standard for Rig control these days, and has it's own way (somewhat bloaty again) of remoting a rig, but it works, & works well, is very well supported and continualy being developed, with a huge userbase and community support forum.

Another option, is EchoLink, in Sysop mode at the radio end, and client mode at the user end. There is again a posibility of remote rig control, but it's main adavatage, is minimal network utilisation when there is no audio. But it can't do "Full Duplex" if that is ever needed, unlike Skype and IP-Sound. IP-Sound has about the best audio compression of the lot, with the Speex codec, very good compression, and very good audio, all it needs is some sort of squelch handling, and it'd be "the tool of choice". Some sources of the app it came from (IP-Phone) are available for 'C' language head bangers if you poke about the web.

Not to say these programs you linked to are bad, or unsupported, they are yet another way to do the job, and I'll look at them in time, just that a quick first look, didn't make me jump up and down shouting "Oh Yeah!".

Another interesting choice could be to join the "Global Tuners" community.
http://www.globaltuners.com/

At present, I think we've got the PCR1000 working well now with Faros and Omni-Rig, at my location it works just as well with Faros as the old IC-R70, or the TS-870S I have, so job done? If anyone else needs to do that, contact me off list.

(Julian, if your monitoring this, I plan to return your PCR soon.)

Thanks again Robert.

"Anyone got any technical info on a "Skanti TRP 8255 S" HF radio telephone?"

Superb radios as I remember from the TRP8200 version of the mid 1980s.
Is there a particular problem?

Fred.

Hi Fred.

I've recently acquired one. A source has appeared in the UK of surplus radios in excelent condition, other than the lithium backup battery needs changing.

I've also now found a tech' manual (80meg zipfile!) But as yet, I've not found any detail in it, as to any remote control commands. Other than it says it has that facility via RS232, and a round 6 pin military connector.

Had it working on RX only so far, and TX into a load. Lots to explore.

Cheers.

Dave.

PS: Anyone suggest which of the various Yahoo groups, might be best to ask about it on? I don't want to polute this list with off topic stuff if I can avoid it.

Hi Ron,

You can get a serial adapter which plugs in the USB port, but beware, some are better than others.

This is the one I used:--
http://www.lynks.co.uk/usb-details.html

I think it is available in most countries.

Peter

5442. RE: [PCR1000] Pcr-1000 connection via usb

Yahoo group: PCR1000
Date: 2009-11-19 13:09:44 UTC
From: Dave Baxter
Topic: 5439 Message: 5442

Confirmed.

TalkPCR works OK with a generic USB<>RS232 adapter with a PCR1000, as does Icom's own software. Just make sure you "Fix" the windows COM Port assignement, so it shows up at the same logical port each time you connect it. Else you'll be hunting for it all the time.

From my personal experience, and that of several others on other groups. Avoid Belkin devices if you can, their drivers seem less than ideal with many ham radio control programs. And here at work, we found some of their API call's though exist, but do nothing. Not good.

Anything else with FTDI or Prologix chipsets are generaly known to be OK.

Connect the adapter.

Then.

Start, Control Panel.

System, Hardware, Device Manager.

Browse to Ports (COM & LPT)

expand that by left clicking once on the + sign where that branch connects to the tree.

Select the com port it shows up as, right click, and select Properties.

Then, the Port Settings Tab, and the Advanced button.

In there, you can (among other things) set the logical port it appears as each and every time.

Do that for each and every USB socket your PC has, then when you re-connect it, it will show up in the same place each time.

Hint! You could assign a different port for it, so it moves about depending on what USB socket you connect it to!

It's the combination of the USB Hub, and the USB Device, as a whole, that the system used to identify it as.

The other way round, you can assign different adapters as different COM ports, regardless of what USB hole you connect them to.

Try it, it works. Also on Windows 2000 (though the route you take to get to that setting is a little different.)

Regards.

Dave G0WBX.

Subject: [PCR1000] Pcr-1000 connection via usb

Hi All
Wondering if you could advise ,i have bought a new computer which has no coms plugs apart from usb and of coarse I cannot attach my Icom pcr-1000, do you know of away to connect via usb.
I was using TalkPcr to control the pcr-1000. My os is xp pro, any help would be great.
Best wishes
Ron

My "no name" adapter has a chipset (used by many manufacturers) that identifies as "Profilic USB-to-Serial Comm Port". I've seen several such adapters work extremely well. See PL-2303 per http://www.prolific.com.tw/eng/Download-2.asp?ID=17

Regards,

Fred.

Hi Dave,

Hmmmm...kicking....Kicking? I intended no kicking nor even a nudge!

But other than that, we're both right of course ;-)

Fred.

Ron:

Here's a repost of a message (with OSs, links & prices updated to be current) that I have sent out in the past regarding a highly recommended (from my personal experience) USB-to-serial adapter:
TT3/TT4 Groups:

Here's a product that I personally own & highly recommend for anyone that does not have a native serial port: Parallax (a well-known hobby company supporting all kinds of uP development support products & peripherals) offers a USB-to-serial adapter that works fabulously (I use it specifically under Win7, WinXP, Win2K, WinME, & RedHat linux). It also has the unique feature that it supports handshake signals (DTR for sure), as well as being USB 2.0 compatible. It is available in two flavors:

1) adapter only (no cable) for $14.99, stock #28030
    at <http://www.parallax.com/Store/Accessories/CablesConverters/tabid/166/CategoryID/40/List/0/Level/a/ProductID/378/Default.aspx>

2) adapter plus 6 foot type A-to-mini B cable for $19.99, stock #28031
    at <http://www.parallax.com/Store/Accessories/CablesConverters/tabid/166/CategoryID/40/List/0/Level/a/ProductID/379/Default.aspx>

The drivers for these adapters are available for download from the Parallax website at

<http://www.parallax.com/ProductInfo/Accessories/FTDIUSBDrivers/tabid/530/Default.aspx>

I use it for all kinds of things on both my desktop & my laptops (HP, Gateway, Compaq, & Dell) & have NEVER had any trouble with it in any way. It might appear more expensive than your average USB-to-serial adapter, but when you consider the number of messages on the Yahoo Groups regarding "I just bought the XXXX USB-to-serial adapter & I can't get it to work . . . HELP . . . ", this is a product that is well worth the price in quality & reliability !!

Disclaimer: I have no connection to Parallax, other than the fact that I have bought MANY of their products (read that as having sent LOTS of well spent $$$ to them !!), & have integrated many of the items that they sell (both uP's & peripherals) in a large number of my hobby projects, and that I am a happy & continuing customer of theirs.

To keep this on-topic, I have personally used this USB-to-serial adapter extensively for programming my PocketTracker, my TT3s, & both my TT4 beta & production units. As another example, I have also used it in combination with my simple CI-V cable to control my IC-756PRO, IC-7000, IC-706MKIIG, IC-R10, IC-W32A, IC-T81, & PCR-1000 each using HRD.

Topic: 5449 Message: 5452

Hi.

Check out a small Windows program called "IP-Sound". (Google for it,
get V0.57a or later, and change the default port from 4444 to 64444,
much less likely to attract anything bad, if it sudenly becomes visible
on the web!)

Run that at both ends, and you can pass sound arround your network, just
fine. It's full duplex, but you can turn off the transmission in one
direction as needed. On a LAN you can up the bit rate, and get near
hifi stereo if you source is such. Via the WWW, you can use things
like the GSM or Speex encoders, and get "usable" comm's quality audio,
and keep the bit rate down.

The other way, would be to use something like "Shoutcast" (from the
Winamp stable) to "broadcast" the audio on your LAN.

Or use Skype on both PC's! (Overkill, for one room to another, but from
one location to another, it works very well!)

Remoting the serial port (so you could control the PCR too) is
relatively easy, except for the fact that many of the PCR control
programs change the baud rate on the fly, when they start up. The radio
defaults to 9600 on power up, but to get the best from it, with the
spectrum scanning etc, the programs up the rate to 38400 or so. There
may be commercial port remote tools that can do that (One may be from
"HW group") but I'm not (yet) aware of any free ones that support that,
not even the excelent free "Eterlogic VSPE" tool.

There is I think also some audio remoting (and serial port too)
programs/tools by the same guy who makes MMtty, MMsstv, MMVari, if you
sctratch arround his website. Not difficult to find with Google.

Cheers.

5456. Help with software

Yahoo group: PCR1000
Date: 2009-12-06 04:34:11 UTC
From: Ron
Topic: 5456 Message: 5456

Hi All
Background: when I purchase my new computer it had no 9pin comms ports usb only and as advised in this group I had to get a model UC232A comms to usb adapter which seems to work ok, but Talk pcr has trouble with with the comms to the black box Won't hang onto the port and very lazy operating, and the Icom software will not even look at this comms connection.
Any other software I can find will not handle this comms to usb either
I can't find the 2.9 version of Talk pcr to try.
My os is XP pro.
Any help with software or advice on my connections would be great
Best wishes
Ron

5458. RE: [PCR1000] Re: Help with software

Yahoo group: PCR1000
Date: 2009-12-07 10:54:14 UTC
From: Dave Baxter
Topic: 5456 Message: 5458

Hi..

You didn't say what make the USB<>RS232 device is. There are some "funny" ones about (at the cheaper end of the market) that will never work correctly with much HAM software! However, there are some very good ones too, that will behave much as a real hardware port, as far as software calls to Windows API call's go that is... (There is no COM port hardware of course! So many DOS programs will fail.)

Is the problem that the virtual com port the USB device "moves around" the assignment space in XP? Like, you make it work once, but next time the port is missing? If so, it can be fixed in one place. Most problems are due to the Virtual Com port so created either moving around from session to session, or if appearing as the same COMx: value, at a value outside the acceptable range that the application software can use. Much HAM software is only capable of using COM1 to COM4 for example, or other limiting value. (Things get a bit interesting after COM6 or COM10 too. But that's another story!)

Any software that tries to use the serial port hardware directly, will fail miserably with the later (NT) versions of Windows. There are some third party tools that can help (Direct IO for one) with that, but that will be of no help whatsoever with any USB emulated COM port, as there is no physical serial port hardware to mess with.

Any application program that uses the Windows API calls correctly, or a third party communications tool suite (so long as that does the correct thing too) should work with any USB emulated COM port (with the possible exceptions of some early USB devices, that do not implement all the API call's correctly, notably buffer flushing and handshake line use etc.)

I have run a IC-PCR1000 from XP and 2000 via a FTDI chipset based USB<>RS232 device using the older "unsigned" windows drivers, & it worked very well with the Icom software, TalkPCR and HRD.

If you willing to spend some time in the darker depths of Windows Control Panel to try and fix this, follow my lead here... You will need to log in to your PC as an Administrator class user. If so, do this....

Connect your USB<>RS232 device to the PC, but NOT the PCR for now, and let the system "settle" after it has loaded the needed drivers etc. Close any running applications. Just so if it all goes bad, you don't have any other trouble to sort out.

Start, Control Panel.

Scroll down to "System", double click on that.

Select the "Hardware" tab, and click on the "Device Manager" button.

Scroll down to "Ports (COM & LPT) and expand that branch by clicking on the + on the left.

You should be able to easily identify the COM port the USB device is showing up as, whatever it is.

Right Click on it, and select Properties from the menu that pops up.

Go to the "Port Settings" tab, and click on the "Advanced" button.

At the bottom of that dialog, is a combo-box where you can see and select what COM port it shows up as, if you click on the down button next to it, you will see what ports are available for it to use, or are already in use. (Hint! If you have any mobile phone management software on your system, some of that can "reserve" a lot of COM port's for it's own potential use. If that is the case, you can disable it and try this again.

Or, just click on a COM port assignment **YOU KNOW IS NOT IN USE**, then the OK button and answer the warning about reassigning ports and inaccessible devices etc.

Check with the "Advanced" button again that the assignment has "taken".

OK your way out of all that, connect the adapter to the PCR, and try your software again. There is a good chance it will now see a COM port it can use.

Note! USB is very much like a network, the way it addresses things. The combination of the root hub ID in the PC, and the device ID connected to it (and any intermediate hubs or expanders) forms a unique identifier to the system. So long as you plug the same USB<>RS232 adapter into the exact same physical USB hole on the PC, the same way, it will now appear always as the same COM port. (Unless something else has grabbed it first! In which case, it'll show up as the next availabe unassigned one. Note, 2000 and XP can create virtual COM ports all the way up to COM255!)

You can use that to your advantage, making one adapter show up as the same com port regardless of where you connect it (but you have to go through the system settings each time to nail it there) or to make it move around the port assignments, or make multiple adapters show up as different ports etc etc...

The same holds true with Windows 2000, but the exact route to the needed dialog is a little different. My guess is in Vista and 7 you can do similar tricks.

Note too, that many USB devices can cause some HF and VHF birdies on your receivers. That all comes from their own little CPU's and the

(often 12MHz) clock used. Ferrite clip on "worry beads" can help,
sometimes...

Have Fun!

73

Hi..

You didn't say what make the USB<>RS232 device is. There are some "funny" ones about (at the cheaper end of the market) that will never work correctly with much HAM software! However, there are some very good ones too, that will behave much as a real hardware port, as far as software calls to Windows API call's go that is... (There is no COM port hardware of course! So many DOS programs will fail.)

Is the problem that the virtual com port the USB device "moves around" the assignment space in XP? Like, you make it work once, but next time the port is missing? If so, it can be fixed in one place. Most problems are due to the Virtual Com port so created either moving around from session to session, or if appearing as the same COMx: value, at a value outside the acceptable range that the application software can use. Much HAM software is only capable of using COM1 to COM4 for example, or other limiting value. (Things get a bit interesting after COM6 or COM10 too. But that's another story!)

Any software that tries to use the serial port hardware directly, will fail miserably with the later (NT) versions of Windows. There are some third party tools that can help (Direct IO for one) with that, but that will be of no help whatsoever with any USB emulated COM port, as there is no physical serial port hardware to mess with.

Any application program that uses the Windows API calls correctly, or a third party communications tool suite (so long as that does the correct thing too) should work with any USB emulated COM port (with the possible exceptions of some early USB devices, that do not implement all the API call's correctly, notably buffer flushing and handshake line use etc.)

I have run a IC-PCR1000 from XP and 2000 via a FTDI chipset based USB<>RS232 device using the older "unsigned" windows drivers, & it worked very well with the Icom software, TalkPCR and HRD.

If you willing to spend some time in the darker depths of Windows Control Panel to try and fix this, follow my lead here... You will need to log in to your PC as an Administrator class user. If so, do this....

Connect your USB<>RS232 device to the PC, but NOT the PCR for now, and let the system "settle" after it has loaded the needed drivers etc. Close any running applications. Just so if it all goes bad, you don't have any other trouble to sort out.

Start, Control Panel.

Scroll down to "System", double click on that.

Select the "Hardware" tab, and click on the "Device Manager" button.

Scroll down to "Ports (COM & LPT) and expand that branch by clicking on the + on the left.

You should be able to easily identify the COM port the USB device is showing up as, whatever it is.

Right Click on it, and select Properties from the menu that pops up.

Go to the "Port Settings" tab, and click on the "Advanced" button.

At the bottom of that dialog, is a combo-box where you can see and select what COM port it shows up as, if you click on the down button next to it, you will see what ports are available for it to use, or are already in use. (Hint! If you have any mobile phone management software on your system, some of that can "reserve" a lot of COM port's for it's own potential use. If that is the case, you can disable it and try this again.

Or, just click on a COM port assignment **YOU KNOW IS NOT IN USE**, then the OK button and answer the warning about reassigning ports and inaccessible devices etc.

Check with the "Advanced" button again that the assignment has "taken".

OK your way out of all that, connect the adapter to the PCR, and try your software again. There is a good chance it will now see a COM port it can use.

Note! USB is very much like a network, the way it addresses things. The combination of the root hub ID in the PC, and the device ID connected to it (and any intermediate hubs or expanders) forms a unique identifier to the system. So long as you plug the same USB<>RS232 adapter into the exact same physical USB hole on the PC, the same way, it will now appear always as the same COM port. (Unless something else has grabbed it first! In which case, it'll show up as the next availabe unassigned one. Note, 2000 and XP can create virtual COM ports all the way up to COM255!)

You can use that to your advantage, making one adapter show up as the same com port regardless of where you connect it (but you have to go through the system settings each time to nail it there) or to make it move around the port assignments, or make multiple adapters show up as different ports etc etc...

The same holds true with Windows 2000, but the exact route to the needed dialog is a little different. My guess is in Vista and 7 you can do similar tricks.

Note too, that many USB devices can cause some HF and VHF birdies on your receivers. That all comes from their own little CPU's and the (often 12MHz) clock used. Ferrite clip on "worry beads" can help, sometimes...

Have Fun!

Hi..

You didn't say what make the USB<>RS232 device is. There are
some
"funny" ones about (at the cheaper end of the market) that will
never
work correctly with much HAM software! However, there are some
very
good ones too, that will behave much as a real hardware port, as
far as
software calls to Windows API call's go that is... (There is no
COM
port hardware of course! So many DOS programs will fail.)

Is the problem that the virtual com port the USB device "moves
around"
the assignment space in XP? Like, you make it work once, but
next time
the port is missing? If so, it can be fixed in one place. Most
problems are due to the Virtual Com port so created either
moving around
from session to session, or if appearing as the same COMx:

value, at a
value outside the acceptable range that the application software
can
use. Much HAM software is only capable of using COM1 to COM4 for
example, or other limiting value. (Things get a bit interesting
after
COM6 or COM10 too. But that's another story!)

Any software that tries to use the serial port hardware
directly, will
fail miserably with the later (NT) versions of Windows. There
are some
third party tools that can help (Direct IO for one) with that,
but that
will be of no help whatsoever with any USB emulated COM port, as
there
is no physical serial port hardware to mess with.

Any application program that uses the Windows API calls
correctly, or a
third party communications tool suite (so long as that does the
correct
thing too) should work with any USB emulated COM port (with the
possible
exceptions of some early USB devices, that do not implement all
the API
call's correctly, notably buffer flushing and handshake line use
etc.)

I have run a IC-PCR1000 from XP and 2000 via a FTDI chipset
based
USB<>RS232 device using the older "unsigned" windows drivers, &
it
worked very well with the Icom software, TalkPCR and HRD.

If you willing to spend some time in the darker depths of
Windows
Control Panel to try and fix this, follow my lead here... You
will
need to log in to your PC as an Administrator class user. If so,
do
this....

Connect your USB<>RS232 device to the PC, but NOT the PCR for
now, and
let the system "settle" after it has loaded the needed drivers
etc.
Close any running applications. Just so if it all goes bad, you
don't
have any other trouble to sort out.

Start, Control Panel.

Scroll down to "System", double click on that.

Select the "Hardware" tab, and click on the "Device Manager"
button.

Scroll down to "Ports (COM & LPT) and expand that branch by
clicking on
the + on the left.

You should be able to easily identify the COM port the USB
device is
showing up as, whatever it is.

Right Click on it, and select Properties from the menu that pops
up.

Go to the "Port Settings" tab, and click on the "Advanced"
button.

At the bottom of that dialog, is a combo-box where you can see
and
select what COM port it shows up as, if you click on the down
button
next to it, you will see what ports are available for it to use,
or are
already in use. (Hint! If you have any mobile phone management
software on your system, some of that can "reserve" a lot of COM
port's
for it's own potential use. If that is the case, you can disable
it and
try this again.

Or, just click on a COM port assignment **YOU KNOW IS NOT IN
USE**, then
the OK button and answer the warning about reassigning ports and
inaccessible devices etc.

Check with the "Advanced" button again that the assignment has
"taken".

OK your way out of all that, connect the adapter to the PCR, and
try
your software again. There is a good chance it will now see a
COM port
it can use.

Note! USB is very much like a network, the way it addresses
things.
The combination of the root hub ID in the PC, and the device ID
connected to it (and any intermediate hubs or expanders) forms a
unique
identifier to the system. So long as you plug the same
USB<>RS232
adapter into the exact same physical USB hole on the PC, the

same way,
it will now appear always as the same COM port. (Unless
something else
has grabbed it first! In which case, it'll show up as the next
availabe
unassigned one. Note, 2000 and XP can create virtual COM ports
all the
way up to COM255!)

You can use that to your advantage, making one adapter show up
as the
same com port regardless of where you connect it (but you have
to go
through the system settings each time to nail it there) or to
make it
move around the port assignments, or make multiple adapters show
up as

5461. power on PCR1000 radio preset

Yahoo group: PCR1000
Date: 2009-12-15 19:16:25 UTC
From: ozyaus
Topic: 5461 Message: 5461

How can I program a preset to be played at power on time?

I have already programmed a couple of presets, but I have to start up the program for the radio to play. Is there any way that once I have a preset, every time i reboot the radio it plays a certain preset without starting up this program?

5462. RE: [PCR1000] power on PCR1000 radio preset

Yahoo group: PCR1000
Date: 2009-12-15 21:51:45 UTC
From: Jeff & Rae Hunt
Topic: 5461 Message: 5462

Hi,

This is easy you just need to look in the directory where the preset files are stored and rename the preferred preset to be the default (you will find a default file in there which you can either delate or temporarily rename).

Jeff

Possibly RFI from the computer, maybe over the serial cable (or audio,
if that is connected)
In my case, careful placement of antenna and chokes on other cables was
able to minimize.

From: Dave Baxter
Topic: 5463 Message: 5470
Attachments: 1 described; binary payloads are missing from this source WARC

At what RF frequencies are you hearing these? If you list as many as you can, it may help us figure out what the problem may be, or it is just broadband crud wall to wall, even so, there must be some eges to it.

Maybe too, if you can make a recording of what they sound like (in AM mode) that might too help identify a posible source. If you do that, make a low compression MP3 file, and put it in the group file area, then let us all know *Exactly* where it is, and what the file is called.

Regards.

From: james
Topic: 5473 Message: 5473

I been using Linux for quite a few years and found that wine runs my Icom PCR1000 software nicely, I was going to upload a photo of a screen shot of Icom's software running with wine in Linux, but it seems I do not have permission to upload any photos to the photo album section.

James - thanks for the comment that it does work. I have been reconfiguring my system, and was getting ready to test it.
Now, if it doesn't work, I know that somebody else has it working. But the way, which version of the PCR-1000 software?

Topic: 5473 Message: 5475

Icom's software is version 2.2

I followed the instructions found here:
http://forums.fedoraforum.org/showthread.php?t=208148

basically just making a symlink in ~/.wine/dosdevices pointing to /dev/ttyS0 and name the symlink com1

and

chmod 777 /dev/ttyS0

which allows non-root users to run the radio, what i did was add chmod 777 ttyS0 to rc.local in /etc so i don't have to run it every time the system boots up,

i normally do not even use microsoft windows anymore but i do keep an extra disk partition for installing other operating systems, i installed windows 2000 and it worked ok, but the windows operating system is old and does not handle my newer hardware that well so i installed wine on Slackware-13 (used a slackbuild from slackbuilds.org) and wine runs that application just as good as windows 2000 or windows XP can.

Hi..

Had a quick listen and look. Most sound like broad band "hash" but some have some interesting background noises too.

How are you powering the PCR, how is it connected to the PC (what sort of PC is it? laptop, desktop) and how is that powered. Types of cables used etc... Also, what other pieces of equipment do you have attached to it.

Are these signals still present if you disconnect the antenna from the PCR? If so, what is the antenna, and where/how is it located.

Do you have any other 70cm receiver, if so, does that "hear" the same QRM signals?

If you can power the PCR from a battery, that will eliminate one posible source of QRM.

Though the PCR will shut down without a DTR (I think) signal from the PC, it will stay powered and running for a few seconds after you pull the RS232 lead. If you do that, do the QRM signals change or go when you pull the control cable?

Try momentarilay turning off your monitor, does that change anything, QRM wise?

I suspect many if not all the QRM signals you hear, may be from your own PC or some attached equipment.

Question, questions I know....

Regards.

Dave G0WBX.

5479. Re: PCR1000 - UHF Beats

Yahoo group: PCR1000
Date: 2009-12-26 18:34:13 UTC
From: james
Topic: 5463 Message: 5479

Another thing to consider, I have a dual band 144/440 mobile magnet mount antenna for VHF/UHF scanning and when I place it near things like the computer speaker it does pick up noise and more birdies (from the amplified speakers).

Antenna placement will have a big effect on noise pickup and probably more so than the serial cable, but the power source can be a big source of noise, as soon as i moved my antenna to the window ledge the noise and birdies went away.

I have a 10 meter radio that must be grounded to the power supply or it puts out an AC hum on both RX & TX, if he is using a large regulated power supply it would do good to run a ground wire from chassis ground on the power supply to the ground on the PCR1000.

-- -- --

off topic:

I have an old Drake shortwave receiver (100Khz to 30Mhz) and for HF listening it is a better receiver that seems to ignore more noise and picks up weak signals better than the Icom PCR1000 listening to the same HF frequencies. The PCR1000 does make a great receiver above 30MHz, lots better than my Uniden Bearcat, and about on the same as my Kenwood TM-731 dual band mobile rig.

I suspect the QRM signal are internal source from PCR. Defective component or local osc tuning - PLL not running correct on this freq ...????

Thanks Dave for help!!!

Hmmmm....

Might be worth taking the lid off, and checking if all the grounding screws are in correctly, and any screening can's are all in place, and any cable shields are intact and grounded in the right places. You may need to get a copy of the service manual to check things over with.

I have an old Belcom LS202E 2m SSB/FM handie here, that sometimes does similar things, after it got dropped one time. Guess a print on the PCB is broken somewhere.

Regards.

Dave G0WBX.

Your observation of the interference with no antenna connected had me thinking of the PLL failure or other as you alluded to.

On the PCR100 (not the PCR1000) PLL failure can cause a comb type picket fence looking interference on the spectrum scope. I have never seen this on a failed PCR1000 (yet.)

Have you tried freeze spray or heat to any of the components while observing the interference?

This may cause the beats to increase or decrease possibly leading you in a certain direction to isolate the fault.

Mostly I have found the diodes failing (usually shorted) in the bandswitching front end and in one rare instance the first broadband preamp IC-4 following these was bad causing very low sensitivity.

It is not unusual to have half a dozen parts bad in a PCR1000 that has sustained a surge from the antenna. Typically I find 2-3 diodes bad...

1st and 2st LO PLL lock Voltage - LCT Terminal voltage tested. Not fault found.

EEPROM Data downloaded and checked. No uncorrdected values found.
>
> Have you tried freeze spray or heat to any of the components while observing the interference?

Interferences observing immediately after PCR "OFF-ON". Freeze and heat not tested.

Very high Temp found by 5V - 8V IC-Stabil 7805 etc. and this ICs input - output capacitances cases.

Your mention of high temperature at 7805 suggests the power supply voltage might be too high.

Some PCR1000 had bad quality "Wall Wart" supplies and excess voltage made the regulators work too hard and the casing become warm. I had instability and intermittent lock-ups until Icom UK replaced the original power supply with a 12 Volt regulated one.

Regards,

Fred.

Hi Fred. Thanks for suggestion.
Yes, I replace the original PS with a regulated.

You replace original PS already or after I suggest?

Reason I ask is I always check power and connections are good before searching for other faults. Even regulated supplies can have strange problems like HF oscillation (because of insufficient regulator bypass/decoupling) that a normal test meter may not indicate.

Regards,

Fred.

Hi Fred, yes I change the Original-PWS with regulated after your suggest. Now work ICs at a normal temp. No hot-T cases more. Under "Photos" a pic from PCR regulated ICs. Color change small from green to brown bcs hi-T. But print are no damaged. I dont no if filtering/decupling C are now damaged bcs hi temp.

Interferences no change with a regulated PWS.

I have in same time all input (Antenna) BP-Filters and Switching-Diodes checked and on defective contacts, sheld etc. No default found. I encountered very difficult to check bcs vy small components. Good lens and Spotlamp help me.

Thanks and regards, Francesco

Hi Francesco,

I had mentioned only about filtering/decoupling components in Power Supply.
Only small possibility of supply HF oscillation but worth checking.
More likely you now have good clean supply at correct voltage and it is excellent that you have no more heat problem :-)

Your picture shows the PCB ok and regulator too hot should not have damaged components nearby. If you refer to service manual and check voltages are OK - then best not to disturb radio more. Too easy for test leads to slip and cause faults!

Radios can have annoying beats because it is so hard to design for perfect quiet performance. Very much more expensive radios than PCR1000 have less beats.
If you have beats everywhere to make reception impossible, you need special service with correct equipment and test programs that Icom service center will have.

I enjoy my radio most with the "Ham Radio Deluxe" program.
What program do you use?

Regards,

Fred.

Hi Fred, thanks for coming back. Yes now are PWS clean and all voltages correct values. No ripple LF,HF etc.
>
> Your picture shows the PCB ok and regulator too hot should not have damaged components nearby. If you refer to service manual and check voltages are OK - then best not to disturb radio more. Too easy for test leads to slip and cause faults!

Yes, now no hotspot Temp more. Littel bit on 7805 - 5V but i can held my finger long time ...hi

Yes, this is correct. My old AOR5000 have some beat also. But by PCR sometime very strong beats (S7) into 70cm-Bands mostley.

>

Hi Francesco,

Looking good. Don't expect reception with no beats unless you buy radio many thousand dollar more. Remember also that there are many electronic things in house and area that can radiate noises you might blame on radio!

Ham Radio Deluxe is powerful, free and supported by donations. It works with many different radios as well as PCR1000.
http://www.ham-radio-deluxe.com/

Enjoy :-)

Fred.

yup, even things in another part of the house can make noise, i can sit in my radio room with absolutely nothing on anywhere in the house on, and ask my wife to turn on the television in the living room on and it will make a small amount of RFI (i can hear it with the squelch open) and the electric knife in the kitchen will make enough noise that i might as well turn off the radio and wait until she is done cutting up whatever she is working on, so i can imagine all the electrical appliances in other rooms (kitchen, livingroom, den, etc...) will have an effect on radios.

When I first took an interest in Morse in the early 1960s I'd hold a second radio close and tune it so that its local oscillator would act as a BFO to resolve thumping hissing sounds into tones.
Oscillators and mixers develop products and harmonics that are hard to screen and can extend further into VHF-UHF than you'd expect if you didn't have a receiver sensitive and close enough to pick them up. Electical things that do work are rarely RF 'silent'.
If you "sniff" around your house and neighbourhood with a small transistor radio, expect some surprises.

For a start....TVs, computers, monitors, their peripherals, routers, networks, powerline comms, switch mode PSUs and wall wart chargers, video recorders & PVRs, mobile phones, appliance controllers, timers, clocks, dimmer switches and lighting,..hell - anything that switches with (or without) the aid of bits of Quartz!

We surely do live enmeshed by copper wiring in an uproar of RF!

Fred.

And then there is PLT....
www.ukqrm.org

Sounds like chasing down the source of the sprogs is proving interesting to say the least.

Re the "regulated" PSU you now use Francesco. Is it a light weight Switchmode type, or a heavy iron cored transformer type? The latter are soooooo much quieter for radio work.

Regards.

I've used the Iron Core based power supplies due to that one fact. Very quiet when designed properly. (by properly, I mean the R.F. chokes in the right places, proper matching of components..etc.)

From: james
Topic: 5499 Message: 5499

i found it works well with wine on Linux and another benefit is even though the interface is simpler and less features my Icom PCR1000 hardware runs cooler so you might want to look in to that = run your PCR1000 for a while with the factory software and see how hot the radio gets, then try IcomControl-3.3 (found in the "Files" section) and after using it for several minutes see how much cooler the radio runs.

thanks m1ajg for that software :)

I just wanted to send a message out to the group. Thankyou very much for all the help. The suggestions on the IP sound to transfer the audio worked great. Made my time with bed rest bearable. The other suggestions about controling the radio from my netbook also worked like a champ. Hope to use all of the info when I can get to the boat to setup the same system. Hope everyone had a great holiday and Happy new year!!

From: GeorgeS
Topic: 5501 Message: 5501

I have tried a few different programs with my PCR1000. The one I liked best was IC-PCR1000 but it had a habit of stopping for no apparent reason and needed restarting fairly frequently. Perhaps it was a function of the netbook I was running it on.

Recently I tried Ham Radio Deluxe with the PCR1000 and my desktop computer and it works much better than anything I have tried. The display is much nicer and user configurable, and the controls work smoothly. I have had it running for three days continuously now without any sign of a problem, and I have the PCR-1000 connected to the computer via a serial to usb converter.

HRD can control 85 different transceivers and receivers including PCR-1000. The PCR-1500 is not listed but may have the same control codes as the 1000.

The program is free and also includes a digital modes decoder.

I have a PCR1000 on a home computer using Windows XP. I am trying to set up a remote connection so that I can control & listen to it from the internet. I've tried using remote desktop (RDP) but can't seem to get the audio to come through the connection. Is there a trick to making this happen? I would prefer to use RDP, but if this isn't possible, is there another small client or software that would help me facilitate this? Thanks, Jon

Use either RDP or one of the VNC clones for control (VNC is available for just about all PC's and OS's) and IP-Sound for example for the audio.

Use Hamachi or any other propritary VPN for security, and you'll be sorted.

Hamachi is particularly easy to install and configure (use a good long random key, and pass phrase) and most of the time needs no modifications to router/firewall setups, and like all VPN's creates a secure private "Tunnel" from one PC to another. It also supports both UDP and TCP protocols going through the tunnel (not all VPN's support UDP that most sound programs use) so RDP/VNC/IP-Sound etc can work over it, as can all your windows shares, if that's what you want.

I can remote control just about all of my shack, 4 PC's 3 radios etc, over one Hamachi VPN from my traveling laptop if I want, just as an example!

Take great care remoting things over the internet, without a VPN, one PC or another WILL be hijacked at some point (and often suprisingly quickly, not that initialy you'll know about it!)

Skype is a good alternative for the sound transfer, but it's "Bloatware" in the extreme, however if you already have it, go with it. Just configure it for autoanswer on the PCR machine, and you're almost done. Also, if you are not carful setting it up, one or both machines may become promoted to a Skype "Supernode", and used by others to proxy their call's through. Security may be an issue, but any ISP data couters (cap's and billing etc) most certainly will be.

I was recently looking into making a program to interface between Skype's text messaging system, and a radio, for rig control. But the API/IO to/from Skype's messaging system is particular barking mad, so as there was no "demand"..... The on-line Skype community didnt seem to understand what I wanted to do either.

Take care.

Errr...

Other than the already suggested options (and HRD is the best yet).....

You can still download the original user software from Icom, though you may have to go onto the US site to get it.

Personally, I'd agree with Matt Parkinson, and go for Ham Radio Deluxe. It's genuinely free, and a very very good match for the PCR1000.

73.

Dave G0WBX.

PS: Re your PC troubles....

Make multiple backups, and verify them. Then, if you need, you can restore your PC/System, knowing you will have all your tools, programs and preferences back again if needed.

Better still....

If you use Windows XP or later, get Microsoft's "Security Essentials" program, and use that as your AV/AntiSpam etc system.. Make sure you keep XP's firewall on, and do not permit exceptions.

If you use Windows 2000 or earlier, there are many genuinely good free programs out there. I run a mixture of AVG, Avira, Nod32, Avast, on the machines I own (each machine runs something different!) if anything "happens" one or another will trigger and alert me to what's happening. Sadly, I can't recommend Zone Alarm as a firewall any more, due to the huge bloat it has become. But if you can still find a free one that will work on 2000, try it. Else, go hear and learn how to "build your own firewall" in 2k. Fiddly, but it works!
http://homepages.wmich.edu/~mchugha/w2kfirewall.htm

If you have a router for web connections, go into it's configuration pages, and TURN OFF UPNP support.

(In this context, UPNP is not the same as the Plug and Play support within Windows. It's a system that lets some software configure the router for it's own ends, but sadly the bad guys use it too.)

Any X-Box console, Echolink or IRLP or other "server" use will need a manually configured port forward, but that's minor hassle for the extra security you get not having UPNP support enabled on the router. Oh, if you run a file or web server for your own, and family use, use non

standard port numbers. It'll still work just fine (with the port specified in the link) but will obscure it's presence from most of the malicious people out there.

If you want/need remote access to your PC, seriously consider a VPN. Look at Hamachi for instance. https://secure.logmein.com/products/hamachi2/download.aspx Choose the unmanaged version for your own personal use, and choose/use a good long random key value when it asks. Such as those generated at:- https://www.grc.com/passwords.htm

Not wishing to rub you or anyone else up the wrong way, but it might be worth reviewing your practices and habits on the web, if you find you keep getting "hit" by malware. Even with all the routers and firewalls you can have, if you or your PC makes a request to download something (good or bad) it will pass through them all, unless you have live real-time content filtering, and that is expensive.

If it was one of the "fake" AV's that got you (AntiVirus 2010, or Personal Security 2010 for example) it is quite easy to get rid of them, with a little finger work, another clean PC to go get some removal tools with, and a protectable USB memory stick.

Sorry for this, but it annoys me that so many people do not know how to make and keep their PC's safer than the default configurations.

Sadly, I learnt the hard way on two notable occasions, and have since found it's much easer to stay safe in the first place, than keep reloading the OS every couple of months or so, and I personally run 4 machines for ham use 24/7 (net connected too) and also now seem to be responsible for the rest of the family, and friends machines too. (Some it seem, like the "darker corners" of the web, but even they don't have the same PC troubles they used to have, since I set them up with Sandboxie. http://www.sandboxie.com/)

Lastly, though he seems to invoke rage in some, keep an eye/ear on... http://www.grc.com/securitynow.htm
In particular, start at the early episodes, and work your way up the list. Lots of very good information there to keep yourself (and your family) safe.

That's all folks. If the above helps just one person, I've done my job.

5511. IF 10.7 MHz Modification

Yahoo group: PCR1000
Date: 2010-01-18 12:29:10 UTC
From: Alexander Geckeler
Topic: 5511 Message: 5511

Hello Group,

since several months I own a PCR1000, since then I used the device on the traditional way with the ICOM software.
Now I want to adapt my Perseus to it to use it as a spectrum display so to say.
I saw during my research that this will only work with an *IF 10.7MHz Output.* Because the second mixer stage will provide 10.7 Mhz within the PCR-1000 I looked for a understandable describtion how a modification should be look like to get an IF Output.
But unfortuantely I didn't found something which will help me.

Therefore I'm looking forward to get any hint or advise to built in an IF Output.

Best regards and thanks for your halp in advance,

73 Alexander

Oh, if you run a file or web server for your own, and family use, use non standard port numbers. It'll still work just fine (with the port specified in the link) but will obscure it's presence from most of the malicious people out there.

If you want/need remote access to your PC, seriously consider a VPN. Look at Hamachi for instance.
https://secure. logmein.com/ products/ hamachi2/ download. aspx Choose the unmanaged version for your own personal use, and choose/use a good long random key value when it asks. Such as those generated at:-
https://www. grc.com/password s.htm

Not wishing to rub you or anyone else up the wrong way, but it might be worth reviewing your practices and habits on the web, if you find you keep getting "hit" by malware. Even with all the routers and firewalls you can have, if you or your PC makes a request to download something (good or bad) it will pass through them all, unless you have live real-time content filtering, and that is expensive.

If it was one of the "fake" AV's that got you (AntiVirus 2010, or Personal Security 2010 for example) it is quite easy to get rid of them, with a little finger work, another clean PC to go get some removal tools with, and a protectable USB memory stick.

Sorry for this, but it annoys me that so many people do not know how to make and keep their PC's safer than the default configurations.

Sadly, I learnt the hard way on two notable occasions, and have since found it's much easer to stay safe in the first place, than keep reloading the OS every couple of months or so, and I personally run 4 machines for ham use 24/7 (net connected too) and also now seem to be responsible for the rest of the family, and friends machines too. (Some it seem, like the "darker corners" of the web, but even they don't have the same PC troubles they used to have, since I set them up with Sandboxie. http://www.sandboxi e.com/)

Lastly, though he seems to invoke rage in some, keep an eye/ear on...
http://www.grc. com/securitynow. htm
In particular, start at the early episodes, and work your way up the list. Lots of very good information there to keep yourself (and your

family) safe.

That's all folks. If the above helps just one person, I've done my job.

5514. Re: software for pcr 1000 & R2500

Yahoo group: PCR1000
Date: 2010-01-18 23:18:20 UTC
From: Terry
Topic: 5505 Message: 5514

If you want the official software from Icom, the firmware and software for the Icom PCR-2500 1500 etc can be downloaded free of charge from Icom Japan.

You have an R-2500 which is intended for use with a separate control head. However, the R-2500 uses the same control software as the PCR-2500. You will need a USB lead. When you have the software installed and working, you will see that when running under software control the control head is automatically disabled.

You will need the manual for the PCR 1500-2500 to get the instructions for installing the software. It might be included in the control software package. If not, you can download it separately from the same web site.

The address for the main website is:

www.icom.co.jp

From the main page, follow the links to "support" and software downloads. Or, use this link to get directly to the software support page:

http://www.icom.co.jp/world/support/download/firm/index.html

The download page shows there are 2 versions of the control software and the firmware: 2.01 and the latest 2.10. If you have the 2.01 firmware it should run with the 2.10 control software. The firmware update package contains good instructions for updating the firmware but it might be better to get the old software working before trying the firmware update.

Version 2.01 of the software will work with XP and probably Win7. The 2.10 soft and firmware officially support Vista and I can confirm that it works ok on Windows 7 (32bit).

You might need to install the USB drivers - see the instructions in Section 4.2 of the PCR-2500 manual.

Good luck!

Has anyone had any success getting a PCR1000 receiver to work with HRD on Microsoft's Vista o/s?

Most postings on this topic seem to suggest abandoning HRD in favour of one of the alternative control programs but as one of those responsible for getting PCR1000 support added to HRD it in the early days, I would like to resolve the problem of getting PCR1000, HRD and Vista to live together in harmony!

What specifically is the problem running HRD & the PCR on Vista? Can't say I've tried that (I can check later) but I have run HRD & PCR1k in anger several times on XP/2k with no issues. It works extreemly well in fact.

Note, you CANNOT run any of the stand-alone PCR control app's AND HRD at the same time. You cannot generaly share a com (serial) port (and it's attached device) between two control app's, at least not without special helper software, and control apps that tolerate such things.

There are some issues with Vista (and Win7) and many common ham programs that use the soundcard, as Vista & 7's sound system interface model is totaly different to XP's and earlier. Another MS "Improvement" I guess.

One way to "fix" that (according to info from other lists) is to use a tool called VAC (Virtual Audio Cable) to connect the incompatable app to the new sound system. (It makes a "Virtual Soundcard" for the app to use.)

It is a paid for tool (Google 'Virtual Audio Cable') but there is a free evaluation version, that though has a nagging voice running all the time, stuff like PSK decoders etc seems to work OK despite the voice QRM. You probably wouldnt want to use that in demo mode for any TX needs though! There may be other similar tools about, but as I don't need them, I don't know about them.

Hi,

Try these links:

This one did not work for me:
http://www.users.bigpond.com/geoffwicks/PCRPilot.htm

Here is the software, just download it:
http://www.qsy.to/pcr/pcrpilot.zip

A pdf with a link to another (better?) software and some 'howto':
http://www.dd1us.de/Downloads/ICOM%20PCR-1000%20rev1v1.pdf
Look at page 3.
Sadly Geocities is closed but maybe the software is avaiable somewhere else.
Maybe in the files section of the group.

Hi Martin,
you have to switch off the bandscope to allow for sound in usb/lsb modes.

Sure, you can use any of the Palm PDA that use a serial cable and not USB. Don't forget you have to have a null modem adaptor in your connection. I think you can use the Palm III, IIIe, IIIx, IIIxe, IIIc, Palm V, Vx, VII, Palm m100, m125. I think all of these use a serial cable, some are battery operated, and some are only greyscale, not color (unlike the Palm IIIc). I have run several of these with the IP1kC software. Works great in color or greyscale.

Best regards,
Dave Lochhaas

You can use the "Palm Software" on most "Palm type devices.
I use a Garmin IQue 3600 GPS which uses the Palm OS, you can get those for under $40 sometimes on eBay :-)
Those use Palm OS v5 and you can even use a Palm Docking Station or cable on the Garmin...

From: Dave Lochhaas
Topic: 5534 Message: 5537

If I may add more to my reply to Francis I would like to note that I
just uploaded to this group's files archive, IP1kC.zip, the original
Palm PCR-1000 control software by jjintokyo. To use on a Palm PDA you
must be able to get the software onto the Palm and this is done by hot
syncing the Palm to a computer with a serial port after loading the hot
syncing software onto the computer. Or you may transfer from another
Palm PDA via the infrared communications ports on the Palm PDA's. Palm
software you may need can be found at
http://kb.palm.com/wps/portal/kb/na/deviceselector/page_en.html#NA%20Handhelds

or tracked down through the Palm Support home page at
http://kb.palm.com/wps/portal/kb/na/deviceselector/page_en.html

To others in this group, please confirm, correct, or add to my ramblings
as I am uneasy that I have left out needed information. Thanks.

Using a Palm PDA to run your PCR-1000 is really cool, and easily allows
the PCR-1000 to become mobile when it is rigged for use with a battery pack.

Best regards,
Dave Lochhaas (in mid-Missouri)

Frank,

I have used the Palm M100 and M105 with the Icom PCR1000 and the TenTec RX320. I found these odd little Palm PDA's on ebay for around 5 GBP in excellent condition. New old stock, boxed units sell for around 15 GBP (as at June 2009). Almost disposable :-)

The M100 series use a plastic touchscreen panel and are known to be pretty robust. One common fault is loss of memory contents/programs when the batteries are removed. This is caused by age related failure of the internal 0.47 Farad 'button' memory backup capacitor and is easily replaced by someone handy with a soldering iron.

Regards

Fraser

Subject: [PCR1000] IF 10.7 MHz Modification

Hello Group,

since several months I own a PCR1000, since then I used the device on
the traditional way with the ICOM software.
Now I want to adapt my Perseus to it to use it as a spectrum display so
to say.
I saw during my research that this will only work with an *IF 10.7MHz
Output.* Because the second mixer stage will provide 10.7 Mhz within the
PCR-1000 I looked for a understandable describtion how a modification
should be look like to get an IF Output.
But unfortuantely I didn't found something which will help me.

Therefore I'm looking forward to get any hint or advise to built in an
IF Output.

Best regards and thanks for your halp in advance,

73 Alexander

Check first in this groups files sections. You never know what's in there, unless you look.

I think though you mean...

<http://www.mods.dk> But you need to register (Free) to get anything these days, then you are limited (with the free membership) to one download a day.

Anyway, they have these mods listed for the PCR1000

Date: Title:
09-04-2006 The Icom PCR-1000 as a SDR RF Front End
26-11-2005 Mod Icom PCR-1000 for DRM reception
26-11-2005 PCR-1000 as a SDR RF Front End
14-03-2001 ICOM PCR1000 Software
23-08-1998 Icom IC-PCR1000 frequency modification

The top three would be of interest in this case...

There are many other ham mod sites, including somewhere a Russian site, that seemed to be almost a mirror of the original mods.dk site.

Some resorces here too:- http://www.radioamateur.eu/ICOM_RX.html

You'll need to add a buffer/isolation amp to the thing, taking it's signal from before any major IF filtering, else all you'll see is what you can hear. Also, it's own RX performance will be affected by whatever you hang on it, or any SDR based radio for panoramic display, can inject a signal back into it, that will again afect it's performance. If you can't isolate the SDR's LO from the radio, us it's controls to put that off to one side of the PCR's IF filter, then re-center the SDR display with it's sofware tools.

The TalkPCR software has an impressive software function, that presents a sort of panadaptor display (but not in CW/SSB modes) Find a big signal, click on it, and the radio will tune there.

I have to say, using a Perseus SDR as just a panadaptor for something like the PCR, is as we would say, a "Sledgehammer to crack a nut". The Perseus is an extremely good RX in it's own right.

Regards.

Dave G0WBX.

I had a quick look on ebay UK and ebay USA today. Both have Palm M100's and M105's for sale. On ebay USA there were two M100's on "buy it now" offers of less than $10. The communications lead should normally be included. I purchased a cradle as an extra as it provides an excellent mount for the Palm along side the receiver.

Hi Frank,

Not sure I can be of much help here. I just loaded the Palm hotsync software onto my computer (Win XP) and all went smoothly. When the Palm was placed in the cradle, and the sync button pressed, hotsync ran without problems. I have only ever done this via the serial port as USB to Serial adapters can sometimes misbehave and cause link problems with some equipment.

It is work making sure your PC software is designed for XP. If not, go to the Palm web site and download the latest version.

Kind Regards

Fraser

>

Hi Frank,

You are experiencing a common problem... RS232C DTE versus DCE !

The Palm RS232C cable is set up as a slave (DCE) to a PC com port. You are now using the Palm as a Host computer (DTE) to the PCR1000. The change from slave to Host means an adapter is needed on you cradles serial lead. The adapter is a Null Modem type (pins 2 & 3 crossed) and is available off the shelf. You will need the 9 pin male to male version of the Null Modem adapter.

You can also build your own if you are handy with a soldering iron

Con A / Con B
Pin2 to Pin3
Pin3 to Pin2
Pin5 to Pin5 (Gnd)

Kind Regards

Fraser

Hi..

There is I think(?) some open source stuff about, but forget where, or if it's even under support/development. If you can search soruceforge or freshmeat etc, you might find something. Of course, you'll need a suitable compiler (probably C based) and know how to tweak the code to compile.

Or, if you have the ability to program yourself, in whatever language the Amiga supports, the command codes and explanations can be found on the 'net in many places, probably even in the file archives of this group. It's not a massivly complex gadget to drive, once you've got over the initial hurdles, more usually associated with handling the serial communicaitons to/from it and the computer.

Have Fun...

Dave G0WBX.

I might be willing to sell my 1000. It's the original model (RS-232, not USB, no Bonito software.)

How much are you offering to pay?

Yes, it will run on 2003. You will need a serial sync cable and a M/M db9 null modem adapter. Software is here
http://www.lynovation.com/CTR-Rcvr.htm

Email them for registration.

5561. icom ic pc-r1000 with palm 111c pda for sale or swap

Yahoo group: PCR1000
Date: 2010-04-05 10:06:14 UTC
From: tadg12345
Topic: 5561 Message: 5561

as above with all psu,leads etc etc the icom is just the black box no box or paper work, i do have the ut-106 (2 weeks old) and can go with the unit for the wright deal,im looking to go back to an hf rx only, so would like to swap frist if poss, but will sell for the right offer, it will come with 2 pda's one is the palm111c and the other is m105, all with base's and softwere there are some un used case's for the pda's as well as softwere etc, all the leads to use the pda and pc so if you have an hf only rx that you may want to swap or if you would like to make an offer for the lot, please bear in mind the the dsp unit cost me over £80 just 2 weeks ago and please state if you want the dsp unit with your price or offer, cheers tadg by the way shipping will be at your cost

5562. EX2009 and Reference Crystal Setting

Yahoo group: PCR1000
Date: 2010-04-11 01:57:10 UTC
From: ki5xp
Topic: 5562 Message: 5562

Hello Group. Hopefully Im not too late to the game!

Came into a PCR1000 for free, sent it off for a few repairs, but bypassed the offer for the recalibration of the BPF's. Found Ex2099 on the web and have set on on recalibration and settings.

First noticed that the displayed VFO is about 15-17khz higher then the actual frequency. I was assuming that the Reference Crystal setting in the EX2009 would adjust this, but it doesnt appear to be the case. Original value was 98, and going from extreme to extreme (1-255) shows no difference whatsoever in the receive frequency, nor does it change the 10.250 (I think, dont have the docs in front of me) at the test point.

We proceeded to recalibrate the BPF's and the S-meters, but began to run into problems the higher in frequency we got on both assuming because of the frequency disparity. I would guess that although the displayed S-meter values were not as high as they "could" be because the signal difference, Im not sure if we'll have to adjust the BPF's again.

None the less, I've tried Ex2009, clicked Start, read the configuration, clicked the Xtal adjust, changed the value, clicked the RX Set, and exited the program. No noticeable difference at all, from one set extreme to the other after saving exiting.

Any suggestions?

Thanks
Charlie

From: Vic Fraenckel
Topic: 5563 Message: 5563

Is there any documentation on the pinout of the RS232 interface. What 232 signals do I need to make available to the PCR100? Can I use just TXD, RXD and GND or do I need more? I have no computers with RS232 ports and I want to use a 232/USB converter based on one of FTDIs chipsets. I have not been able to ascertain the radio's comport pinout as it does not seem to be documented in the radio's instruction manual. Is the port documented any place?

Any enlightenment will be appreciated!

Hello
Just use a normal straight RS232 to RS423 converter / adapter cable. Yous
should pick these up from any computer / electronics store or on ebay or
amazon.
Pins are wire 1 to 1 i.e RxD to RxD, CTS to CTS etc
If you are in the UK scan www.scan.co.uk sell the a DUAL head USB converter
which I use and has the FTDI chips.

From: Dave Baxter
Topic: 5563 Message: 5565

Hi Vic.

You will probably "Need" to make the (I think) DTR line High (from the PC, or wired in the connector.) If your making a custom lead, just loop round the usual suspects.

Though you can send the "power on" command without it, and it will power on, after a few seconds it will power down without that handshake line being asseted. At least, that's how the PCR1000 behaves, I'm only guessing the 100 is the same.

If you use a "Standard" RS232 extension lead between the PC and the PCR, then any of the common control programs will do the correct thing for you. You only need to be aware of that behaviour, if you are going to "extend" the comand/control link somehow, or create your own control program.

I have used FTDI chipset based USB/RS232 adapters with the PCR1000, and all works well, so the 100 should too. (With XP and Win2k)

The interface pinout is standard, so much so, a standard "straight" (pin to pin) extender lead works just fine with all the PC's I've tried it with..

Check it out with the Icom sofware first, before moving on to something else. You can still get the Icom control program from Icom, if you scratch arround their site, or perhaps in the archive on this group.

Out of interest, what's your intended use? General listening/moinitoring, or are you going to do something "interesting" with it?

I currently have a PCR1000 working as the RX for my IBP monitor station, with a little software help of my own crafting. (To convince OmniRig, that all is well.) The result of all that can be found at http://g8kbv.homeip.net:8008/

73.

Thanks to those that took time to answer my inquiry. It was appreciated.

>Is there any documentation on the pinout of the RS232 interface. What 232 signals do I need
>to make available to the PCR100? Can I use just TXD, RXD and GND or do I >need more?

OK, I made a typo here PCR100 should read PCR1000. Sorry! Don't even know what a PCR100 is! <GRIN>

I purchased my PCR1000 in 2004 with the intent of using it aboard my boat, but plans changed and the boat had to be sold. The PCR1000 was put into storage in its unopened box. Last week I came across it while doing some other project and now I would like to resurrect it. All my computers (all XP current versions up to date) are without serial ports and I would like to use one of my FTDI chipset converters (USB to TTL) with the radio.

My query asked if I need any other signals then TXD, RXD and GND to be presented to the 1000. Apparently I need DTR as well as Dave Baxter pointed out. Do I need any others? I intend to use the updated version of the software that came with the radio, at least to get started. I understand that ICOM has an update and I will get it downloaded ASAP. I assume the software handles the DTR issues. One of my concerns is that the FTDI provides TTL level RS232 signals, either 3.3V or 5V. I would like to know if this signal type will drive the 1000?

Is there better software available to drive the 1000 other than the ICOM stuff? I have the ICOM Instruction Manual which is very thin on the technical stuff.

Any further enlightenment will be appreciated.

Vic... Look up 'Ham Radio Deluxe'.
http://www.ham-radio-deluxe.com/

Or, TalkPCR (I think there are versions of that in the group archive.)

HRD supports the '1000 out of the box, and is about the best Ham radio control program on the planet! Best of all, the price is right (Free)

Just buy a Windows certified USB/RS232 adapter, unless you "Know" a particular device is fully OK (steer clear of a well known brand beginning with a B! Some of their drivers are a bit odd in the software buffer department we've found.) and again, once the drivers for that are sorted, all should "just work"... Generic "Prolific" chipset devices also seem to work OK too.

There is a way to get Windows to use the same logical com port each time you connect the adapter too, not got the time to type it all again, but if you look back in the group archive, I and others have mentioned it many times.

Hint. Each USB "port" on your PC, probably has it's own controller chip. So, when you plug a gadget in, Windows sees it often as "New Hardware" because you've not re-connected it to the same place it knew about before.

There are lots of good info on FTDI's website re all this, as well as others.

Control Panel, System, Hardware, Device Manager, find the device/port, right click, select Properties, Port Settings, then the "Advanced" button, in there you can "Fix" the com port it shows up as with the "COM Port Number" selection. Do that for each socket you can connect it to, and it'll then always show up as the same logical com port.

Note, if you later put a USB hub between the PC and the adapter, it'll get assigned another port again.

The 1000 is a good radio, if a little deaf at VHF and up, but nothing that a decent antenna can't fix. The opposite seems true on HF (especialy the lower bands after dark) where a 10dB attenuator can be a good addition!

With HRD as the controlling application, it brilliant!

Take a look at the "Global Tuners" website too. Something else to do with it.

Back to the grind now. 73.

Dave G0WBX.

5568. Re: [PCR1000] Re: PCR1000 Serial Port Signals

Yahoo group: PCR1000
Date: 2010-04-12 15:18:47 UTC
From: Mark J Culross
Topic: 5563 Message: 5568

Vic:

Look in the PCR1000 files section for a ZIP file named PcrMC98.ZIP. It contains the latest version of the program that I wrote a while ago. It is FREE, so please give it a try. If you like it, keep on using it. If not, nothing spent, nothing lost !! The weakest part is the lack of a HELP file. Instead, I put all of my work into the program itself, and did my best to make it self-explanatory.

There are actually two executables included in this ZIPfile. The first, PcrMC.exe is a DOS text-only version . . . it represents my original program development. Much later in the development cycle, I decided to implement the same capabilities in a DOS 640x480 graphical version as PcrMC-SA.exe. Both of these run very well under multiple versions of Windows (Win95, Win98, WinME, Win2K, WinXP . . . I have not personally tested it in Vista, but it runs great under Windows 7) . . . PcrMC.exe will run either full-screen or in a DOS window . . . PcrMC-SA.exe will only run full-screen (this is a Windows restriction, not a restriction of the program !!).

Either executable can act as a very powerful scanner. In addition, the PcrMC-SA executable performs as a very good spectrum analyzer.

The basic syntax to run the program is as follows:

```
   pcrmc[-sa]  [ -com1 | 2 | 3 | 4 ] [ -fast ] [ -debug ] [ filename ]
```

Note that all command-line options are case-insensitive.

[-com1 | 2 | 3 | 4] : you can specify the COM port on the command-line to override that which is recorded in the PCRMC.INI file.

[-fast] : this will skip the pause on the "HELP" screen as the program is started up.

[-debug] : this will cause a PCRMC.DBG file to be created that will contain time-stamped entries for each command sent to the PCR-1000 and each status returned from the PCR-1000. Note that when the receiver is used as a scanner, this debug file can grow quite large in time !! Be aware of the disk-space requirements by running this for a long time.

[filename] : you can specify the "program" file that you'd like PcrMC to initialize with upon startup (it is not necessary to also specify the file extension as this is assumed to be .PGM). See some of the included "program" files for examples of how to make use of the powerful capabilities within the PCR-1000 that Icom's included

Windows program woefully ignores and/or hides from us !!

Good luck & let me know what you like/dislike. It's been quite awhile since I worked on it, but updates are not necessarily out of the question. I definitely still use it all of the time. Even though it works especially well on very old (DOS-only) PCs (since that is what it was originally developed for), it works equally well under Windows (see above).

A couple of notes that may prove very useful are as follows:
ALT-H shows a help screen (the closest thing there is to a HELP file !!)
ALT-A goes into "automatic" (demo) mode which will let you exercise
          all of the program features even without your PCR-1000 attached
ALT-P starts/stops "program" mode
ALT-S starts/stops "scan" mode
ALT-Q quit without saving configuration
ALT-X exit & save current configuration

Pressing any of the selection keys (for example, O for mode) will cause that field to blink, indicating the selection that can be controlled using the up/down and/or left/right arrow keys to change the selection. Press the ENTER key to complete the selection for that field.

Frequency information can be entered anytime that no other fields are already active (pressing F first is not absolutely necessary). When entering frequency information, you can also use the backspace key to make corrections. As well, you can use the ESCAPE key prior to hitting the ENTER key in order to discard any frequency changes made and return to the previous frequency setting.

Some keys take effect immediately (typically those that alternate between two settings) such as G for AGC on/off, B for NB on/off, etc. Some keys have multiple functions (but with related control) such as P for bandscope...pressing P once will let you select the bandscope speed...pressing P again while the bandscope selection is active will change the bandscope vertical resolution multiplier.

Feel free to e-mail me if you have any questions, comments, and/or suggestions for improvements.

Have fun !!

You can also check out this site for other PCR Software :-)
http://members.cox.net/fiftyone.50/IComPcr.html

PCR Pro, TrunkPCR and PCR Remote are written by me and are Donation Ware...
All FREE to try with no expiration time limits

The signals required are TX, RX, RTS, CTS, DTR, DSR and GND...

Regards,
Jay

Check in the group archives.

There should be lots of stuff in there re PCR1000 command codes, and who does what software etc.

Not dificult to DIY a program yourself, but not exactly straightforward either.

Sorry my mistake I didn't make myself clear enough.

I was interested in a hardware controller so that I might be able to do
away with the PC entirely, potentially for mobile use.

Alternatively I guess I could use a netbook.

Thank you for the response.

Neil

OK No worries.

Again though, always check the group archives, as this has been
discussed several times before.

I know there are at least two DIY "Projects" documented elsewhere on the
web for this purpose too, so some dedicated Googling should bring them
up. Not sure if they are documented in English though, one I'm sure is
by a German Ham, and very well done too from memory.

A netbook is probably the easiest way to go, as you also then have the
means to record, decode, & log what is recieved too, as well as control
the thing. HRD is about the closest to an all in one app for all that,
but is Windows based, so your choice of OS's is limited if that's what
you want.

There are many many other sofware tools for this radio too of course.
Some even run on OS's other than Windows, so I'm told.

Regards.

5574. Ham Radio Deluxe

Yahoo group: PCR1000
Date: 2010-05-18 02:30:49 UTC
From: james
Topic: 3057 Message: 5574

seems to work great in XP, (got tired of tinkering with Linux)

although i found a minor annoyance = every time i launch the app it seems to sound odd but i also found the problem is even though the "IF Shift" appears to be centered it really isn't, anyone that has used HRD may or may not know this, just right-click on the slider for "IF Shift" and select "Center" in the popup menu and it clears right up,

5575. RE: [PCR1000] Ham Radio Deluxe

Report that to the HRD support group. Linked from within HRD via the webside I believe.

They have a good forum, and Simon (the author) does notice, as do other people who are closer to it than the likes of us.

Probably just somehting that get's initialised not quite right, if so, that could be fixed I guess, but you need to let them know.

Best Regards.

Dave G0WBX.

5576. PCR Pro version 1.14.266 Now Available

Yahoo group: PCR1000
Date: 2010-05-21 05:32:38 UTC
From: Jay
Topic: 5576 Message: 5576

PCR Pro version 1.14.266 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has a Two Additions and One Fix...

May 20,2010 - Fixed: Setting Date Time Pickers Correct Date in Timed Recorder.
May 20,2010 - Added: Clicking the Channel Hits Indicator, now brings up the Channel Hit Editor.
May 20,2010 - Added: Separate Frequency display in Timed Recorder.

Version 1.14.266 Released 05/20/2010

Note: The Date Time Picker in the Timed Recorder Settings will show as Month/Day/Year.
Ex: May 21, 2010 will show as 05/21/10 for ALL Regionial Settings...

Regards,
Jay

5577. My PCR1000 is for sale

Yahoo group: PCR1000
Date: 2010-05-22 15:28:08 UTC
From: ke8vi
Topic: 5577 Message: 5577

Mint condition PCR1000 with box, a/c adapter, antenna, and a new Serial-to-USB cable. No DSP. I don't have the original serial cable. Software and manual on CD. I thought I would check for interest in this group before putting it on ebay. Price is $250. Please email me directly if interested. Thanks, Paul, KE8VI.

http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcrDwnld.html

NOTE: Moto Type-I Support *should* be finished in the next major update.

This update has Three Changes, Five Additions and Ten Fixes...

May 17,2010 - -----: Changed priority of Squelch Close notification in
Trunking.
May 19,2010 - Added: "Call End Notification" when Inactive Call
"Times-Out" and Still sitting on a Voice Channel.
May 19,2010 - Fixed: Displaying Recovery Rate / %1's in Correct Window
when in Dual Mode.
May 20,2010 - Fixed: Setting Date Time Pickers Correct Date in Timed
Recorder.
May 20,2010 - Added: Clicking the Channel Hits Indicator, now brings up
the Channel Hit Editor.
May 20,2010 - Added: Separate Frequency display in Timed Recorder.
May 23,2010 - Fixed: Importing Moto Sites from RR.com's Web Import, that
have been Rebanded.
May 23,2010 - Added: Two Channel Decoder Inputs for Edacs (Sound Card
Left/Right Channels).
May 24,2010 - Fixed: Setting the ReBanded Flag in the decoder dll.
May 27,2010 - -----: EDACS Dotting Sequence detector "# of Times
Detected" uses Lower Values.
May 28,2010 - Fixed: Setting the Inactive TimeOuts when Trunk Settings is
loaded.
Jun 02,2010 - Fixed: Adding New Selction in Timed Recorder, Min - Max
Date Error.
Jun 02,2010 - Fixed: Removing Last Selction in Timed Recorder wasn't
Updating Current Selection.
Jun 03,2010 - Fixed: Retrying a Recording in Timed Recorder from failed
attempt.
Jun 03,2010 - Fixed: Timed Recorder now Recording Again with all Regional
Settings...
Jun 03,2010 - Added: Option to Invert Colors in Sweep Picture before
Printing.
Jun 03,2010 - -----: Mode & Filter Changed per PCR Model for Timed
Recordings.
Jun 04,2010 - Fixed: When a Timed Recording is Completed, PCR Set Back to
Current Bank and Channel.

5583. My PCR1000 no longer responds :-(

Yahoo group: PCR1000
Date: 2010-06-21 21:05:29 UTC
From: dchurch24
Topic: 5583 Message: 5583

Hi all,

I have a PCR1000 and it was working great last year. Over the winter I moved house (again) and haven't used it much.

Now I'm settled again I decided to dig it out of the box and play!

Sadly, though, nothing (software) seems to connect to it.

I have terminalled into it and all I get is a constant stream of:

H100

Which I take to mean is "off".

If I try to send commands (via Minicom) nothing happens.

Is it fried?

regards,

dchurch24.

Did you try sending the "H101" command (In CAPS)?

If it isn't turning on, you may have to send it in for repair...

Jay

I did try sending H101 (and a few others like H1?), but there was no response, simply a continuation of the H100 every second.

I haven't tried a different cable, but when I get home from work tonight that's the first thing I'll be trying - thanks.

I find it odd that it turns on to tell me that it's not turned on ;-)

You need also to assert the handshake lines from the PC (RTS & DTR) else it'll at best shutdown after a few seconds, if it accepts the command at all. If you can see the "H100" indicator message coming back to you, that's a good start, at least the baud rate is OK.

Woaah!

How do I assert the handshake through minicom?

I have used qpcr1k in the past, and that has worked fine.

I tried the pcr1000 on two machines last night (one Linux x86 and one Linux 64 bit AMD64) just in case it was a local config error, but both returned the same results.

I was thinking that the only thing that has happened to the box since I last used it was....nothing! So, could it be that there's a CMOS battery or similar in the box that may now be dead?

5589. RE: [PCR1000] Re: My PCR1000 no longer responds :-(

Yahoo group: PCR1000
Date: 2010-06-22 11:27:44 UTC
From: Dave Baxter
Topic: 5583 Message: 5589

I don't know "Minicom", but you can do the same thing by wiring up your own serial cable if needed. All the info is in the public domain.

Just loop RTS<>CTS and DTR<>DSR<>CD at each end, linking only Ground, and the two data lines end to end as needed. Don't worry about the Ring Indicator line.

Check any specific control software manuals, some do manipulate one or more of those lines, you you'd need another wire or two end to end perhaps.

Comments Jay, as a PCR1000 software author?

Cheers.

Dave G0WBX.

One option to try would be to download PCR Pro:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

You can use WINE in Linux to run this or just in Windows...

After you install, run the program, click on the [Menu] Button - Options ->
COM Port and select your COM Port, then choose [Menu] Button - Options ->
COM Status.

This will show the status of the CTS, DSR and CD Lines. The CTS Line should
be active if your cable is good, if not then try another cable...

To watch the Serial Data, click the "Bank" Label in the "Memory Banks" Panel
on the Bottom Center of the screen to bring up the debugger...
Toggle the Power Switch in the Program Display and see what data is
displayed...

Jay..

Can your PcrPro software itself accept remote control instructions from somewhere eles? Via virtual COM port (emulating C-IV commands for example) TDP/IP, or DDE link?

A wild thought just occured, for something else I use.

Not PCR Pro... PCR Remote will allow you to control a PCR over TCP/IP, but using my own specific commands with the server and client. It doesn't however let you send direct commands to a remoted PCR...

Jay.

Can you do the usual stuff, set frequency, mode, filters, levels etc,
and get the current settings reported back, like a "classic" remote
controlable RX?

Dave 'WBX.

You bet...

The client program looks very similar to the server, from the remote (client side), you can change frequencies, mode, filter, volume, squelch, IF Shift , tone squelch, channels. Start/Stop Scanning/Searching, see the signal on a meter, view the BandScope, chat with the operator of the server and much more :-)

5596. TrunkPCR version 0.90.271 Now Available

Yahoo group: PCR1000
Date: 2010-06-24 05:20:40 UTC
From: Jay
Topic: 5596 Message: 5596

TrunkPCR version 0.90.271 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcrDwnld.html

NOTE: Moto Type-I Support *should* be finished in the next major update.

This update has Five Changes, One Addition and Two Fixes...

Jun 07,2010 - Fixed: Setting Minimum Date of DateTimePicker in Timed
Recorder with all Regional Settings.
Jun 12,2010 - -----: COM Ports Now Selectable up to COM255.
Jun 12,2010 - -----: Now Displays ALL Available COM Ports.
Jun 13,2010 - -----: Timed Recorder Current Date now Displayed per
Default Regional Setting.
Jun 20,2010 - -----: Squelch Responds to Actual PCR Model.
Jun 20,2010 - Added: DTCS Squelch Selector.
Jun 20,2010 - Fixed: CTCSS and DTCS Squelch Search in Main & Dual
Display.
Jun 23,2010 - -----: Decoder Channels now Set to One if Receiver Type is
Set to Single.

Version 0.90.271 Released 06/23/2010

Regards,
Jay

5597. PCR Pro version 1.14.272 Now Available

Yahoo group: PCR1000

PCR Pro version 1.14.272 Now Available for Downloading from homepage:
http://members.cox.net/fifty.50/PcrPro/PcrProDwnld.html

This update has Four Changes, Two Additions and Three Fixes...

Jun 26,2010 - -----: Some Possible Recording Errors are now logged to
Error.log instead of a Message Box.
Jun 26,2010 - -----: Changed a few lines of code in Timed Recorder to
eliminate some possible Min/Max Date Errors.
Jun 26,2010 - -----: Squelch Responds to Actual PCR Model when in
Emulation Mode.
Jun 26,2010 - Added: Current Timed Recording Length now shown in
TitleBar.
Jun 26,2010 - Fixed: Wave File is now Closed Properly when Recording is
finished.
Jun 27,2010 - Fixed: Wave Buffers Memory is now released when Recording
is finished.
Jun 28,2010 - Fixed: Timed Recorder Min/Max Date Errors when Passing
Midnight.
Jun 29,2010 - Added: More Error Trapping in Play Wave File Routines.
Jun 30,2010 - -----: Adjusted the size of the Bandscope Display.

Version 1.14.272 Released 06/30/2010

Regards,

5598. Palm PDA Control PCR1000

Yahoo group: PCR1000
Date: 2010-07-14 21:59:33 UTC
From: Fred
Topic: 5598 Message: 5598

Greetings all,

I'm rather pleased.

An old Palm VIIx PDA acquired for pennies works well with the IP1kc V1:2.1 Palm PDA Control Program. It's the impressive European varient by MM0BFF downloaded from the PCR1000 group files section.

Connection detail eventually found by Google was a simple 3 wire adapter cable but that found to work is wired 5-5 with 2-3 and 7-8 crossed.

Can anyone advise on the memory function and is this the last available program version?

Regards,

Fred.

Hi Fred,

I tweaked the original software written by JJ, I did a short doc on operating the IP1kc program which is in the files section, here is the part that mentions the memories:

You can create separate banks by creating a new memo pad, precede the title with the number of the bank and a hyphen followed by 'IP1kC.c.Memory' then another hyphen and the name of the bank e.g. '1-IP1kC.c.Memory-HamBands', enter the frequency below it e.g. 145.500Mhz & 433.500Mhz in Bank 1 called HamBands would look like this:

1-IP1kC.c.Memory-HamBands
145000000 2m FM Calling
433500000 70cms FM Calling

Put each frequency on a separate line following the same convention. Remember to save the memo by hitting 'Done' when you are finished.
Before scanning, navigate through the memories using the M+ or M- buttons until a frequency in the bank you wish to scan appears then hit the scan button, you can only scan one bank at a time. Remember you have to have 'Scan Memory' selected in 'Scan Setup'.

I have the original source files if anyone wants to pick up the baton and carry on developing this program for the PCR1000 as I no longer own a PCR1000 :(

From: Fred
Topic: 5598 Message: 5602

Hi Iain,

Your tweak is a fine job and much appreciated - as is your reply and guidance!

I had noticed that Palms turn up quite a lot second-hand and remembering such a device could control a PCR1000, gained my near pristine Palm VIIx for the princely sum of fifty pence!
Made a very compact in-line adapter (connectors wired 5-5 with 2-3 and 7-8 crossed then bonded together with epoxy).

Also acquired a scuffy but working Palm Pilot 5000 which had no docking cradle. Found it could engage with my Palm VIIe docking cradle connector if I removed the base screw and lifted off the cover.
This made me wonder if Palms with the same connector had the same connections and if one had lost its docking cradle, would direct soldered wiring be possible?
What I found....

Looking at docking cradle connector's contacts from left to right.
1 DTR
2 + 3.3V
3 Receive Data (RXD)
4 RTS (Request To Send)
5 Transmit Data (TXD)
6 CTS (Clear To Send)
7 GP-ID_1 (direct to 3.3v = HotSync)
8 GP-ID_2 (via 10KOhm to 3.3v = Modem)
9 Not used
10 Ground
The Palm's connector therefore numbers from 10-1 looking from left to right.

The Palm 5000 did work from the partly disassembled Palm VIIe docking cradle and successfully set-up with Hotsync (38,400, 8, none, 1, hardware flow control).
BUT - unfortunately not as a PCR1000 controller as IP1kc locked up and PCRPilot returned a fatal error (reset needed). No matter - it only cost me 20 pence and I've gained useful information for any other Palms with same connector.

The Palm VIIe works a treat as an attractive, economical result that appeals to my Scottishness - and might encourage others to find and apply those bargain Palms!

Kind regards,

Fred.

Hi Fred,

I tweaked the original software written by JJ, I did a short doc on operating the IP1kc program which is in the files section, here is the part that mentions the memories:

You can create separate banks by creating a new memo pad, precede the title with the number of the bank and a hyphen followed by 'IP1kC.c.Memory' then another hyphen and the name of the bank e.g. '1-IP1kC.c.Memory-HamBands', enter the frequency below it e.g. 145.500Mhz & 433.500Mhz in Bank 1 called HamBands would look like this:

1-IP1kC.c.Memory-HamBands

145000000 2m FM Calling

433500000 70cms FM Calling

Put each frequency on a separate line following the same convention. Remember to save the memo by hitting 'Done' when you are finished.

Before scanning, navigate through the memories using the M+ or M- buttons until a frequency in the bank you wish to scan appears then hit the scan button, you can only scan one bank at a time. Remember you have to have 'Scan Memory' selected in 'Scan Setup'.

I have the original source files if anyone wants to pick up the baton and carry on developing this program for the PCR1000 as I no longer own a PCR1000 :(

Topic: 5603 Message: 5603

PCR Remote version 0.70.054 Now Available for Downloading from homepage:
http://members.cox.net/5150soft/PcrRemote/PcrRemoteDwnld.html

This update has a Four(4) Changes, Seven(7) Additions and Nine(9) Fixes...

Jun 26,2010 - -----: Some Possible Recording Errors are now logged to
Error.log instead of a Message Box.
Jun 26,2010 - -----: Changed a few lines of code in Timed Recorder to
eliminate some possible Min/Max Date Errors.
Jun 26,2010 - Added: Current Timed Recording Length now shown in
TitleBar.
Jun 26,2010 - Fixed: Wave File is now Closed Properly when Recording is
finished.
Jun 27,2010 - Fixed: Wave Buffers Memory is now released when Recording
is finished.
Jun 28,2010 - Fixed: Timed Recorder Min/Max Date Errors when Passing
Midnight.
Jun 29,2010 - Added: More Error Trapping in Play Wave File Routines.
Jul 08,2010 - Fixed: Displaying Channels in Import Bank Tool after
Importing FQL Files.
Jul 08,2010 - -----: In Import Bank Tool, the Pop-Up Menu now activated
by Right-Clicking in Channel List.
Jul 08,2010 - -----: In Import Bank Tool, the "Import To" Menus moved to
separate Menu.
Jul 19,2010 - Added: Security Settings to Block Frequency Ranges (200
Entries Allowed).
Jul 19,2010 - Fixed: Changing Frequency using Frequency Selector on
Server Side.
Jul 20,2010 - Fixed: Processing D-Star NMEA Messages that have "$$CRC"
with-in.
Aug 03,2010 - Fixed: Limits of Users who have Donated More Than $500.
Aug 04,2010 - Fixed: Chat Window Now Loaded when New Chat Message
Arrives.
Aug 04,2010 - Added: Client Now Shows Total Users Online of the Server
it's Connected To.
Aug 04,2010 - Added: Initial Support for DDE Connections.
Aug 07,2010 - Added: More Ascii Chars allowed in Remotes' "My Info".
Aug 07,2010 - Added: More Ascii Chars allowed in Server & Remote
PassWord.
Aug 08,2010 - Fixed: Setting Channel in Remote when Scanning.

Version 0.70.054 Released 08/08/2010

From: Paul
Topic: 5604 Message: 5604

I was talking to Kai the sysop of the Broome, WA node on Globaltuners today and he has asked me if I know of anyone selling a PCR1000/1500. The PCR in use on GT is only a loaner so he would like to get one of his own to secure the future of this popular receiver. If anyone has one or 'something similar' that is SSB and CAT capable please can you get in touch with me and I'll pass on your details to Kai.

Thanks,

Paul

GBP 82 with 3-1/2 hours to go. With such a bargain in the offing, who'd need ICOMs latest models and what of interest would they receive above 1.3Ghz?

I've been using Palm VIIx and m100 PDAs as controllers with my PCR1000.
Marvellous fun for very little spend.

:-)

Fred.

5607. Just a question

Yahoo group: PCR1000
Date: 2010-09-03 04:16:47 UTC
From: aisg@bellsouth.net
Topic: 5607 Message: 5607

Does anyone out there monitor the Russian Numbers Stations. I am looking for more information on this. Any help would be useful.
Text of the article:
From Wired Magazine.

Mysterious Russian 'Buzzer' radio broadcast changes
15
By Duncan Geere |25 August 2010

The output of a mysterious radio station in Russia, which has been broadcasting the same monotonous signal almost continuously for 20 years, has suddenly changed.

Numbers stations are shortwave radio stations that broadcast computer-generated voices reading numbers, words, letters or Morse code. Their purpose has never been uncovered, but evidence from spy cases suggests that they're used to broadcast coded information to secret agents.

Over the past week or so, the output of one particular station that broadcasts from near Povarovo, Russia, increased dramatically. The station has a callsign of UVB-76, but is known as "The Buzzer" by its listeners because of the short, monotonous buzz tone that it normally plays 21 to 34 times per minute. It's only deviated from that signal three times previously -- briefly in 1997, 2002 and 2006.

In early August, a garbled recording of a voice speaking Russian was heard by listeners. A few days later, on 23 August at 13:35UTC, a clearer voice read out the following message twice: "UVB-76, UVB-76 ☐ 93 882 naimina 74 14 35 74 ☐ 9 3 8 8 2 nikolai, anna, ivan, michail, ivan, nikolai, anna, 7, 4, 1, 4, 3, 5, 7, 4", before returning to its normal broadcasting.

Since then, a number of other distorted voices have appeared over the normal buzzing transmission, as well as knocks and shuffles, as if someone were moving things around inside the broadcasting room. It's believed that the transmission site has an open microphone, which occasionally picks up sounds from technicians working within the broadcast site.

Various fans of the station have begun the process of trying to decode the signal. Interpreting the numbers as co-ordinates gives a location in the middle of the Barents Sea, between Norway and Russia, where there's large scale oil and gas production, and where the Russian army plans to test anti-aircraft missiles in the near future.

Others suspect that it might be a transmission that signals the availability of another system -- like a dead man's switch, possibly even for Russia's Cold War-era Dead Hand fail-deadly system, which was to trigger ICBM launches if a nuclear strike from the United States was detected. Since the fall of the Soviet Union, it may have been repurposed.

The transmissions continue, and are being documented on the Wikipedia page for the station. If you'd like to help, it's possible to listen in yourself, as one fan has rigged up a web stream of the signal. It's currently very busy, however, so if you have difficulty tuning

in, then try again later.

What are your theories for what the signal might be?

Michael Hesser

Use the excellent and free Ham Radio Deluxe. This allows you to run two (or more) radios in separate windows within HRD and the radios may be independent of each other or linked.

See http://www.ham-radio-deluxe.com/

Go into your c:\program files\Icom\ directory and then copy and paste the same directory. Go into the copy and then rename it to pcr1001 and also change .exe and .ini paths too. Then you can run more than one instance at a time.

From: Jamie
Topic: 5608 Message: 5611

Rather than renaming the exe and ini, just make a copy of the entire icom\pcr1000 directory ("folder") under another name, like icom\pcr1000B. (Windows is just fine with multiple exe's running with the same name.)

Then in the copied directory, find pcr1000.ini and edit it in notepad. Find the line that says

MEMFILEPATH="C:\Program Files\Icom\PCR1000\PCR1000.MCH"

and change it to

MEMFILEPATH="C:\Program Files\Icom\PCR1000b\PCR1000.MCH"

Now go to your desktop, assuming you already have a shortcut to the program. Make a copy of the shortcut, rename the copy to ICOM2 or whatever. Then right-click on the copied and renamed shortcut, click Properties, and change both the "Target" and the "Start in" path to end in PCR1000b or whatever.

(You MIGHT not have to actually have two copies of the exe, nor change the exe path. Windows is usually fine with two copies if the exact same exe running at the same time. The "Start in" will point each instance to the directory where it finds its .INI file, and it finds the .MCH and other files from there. However this would depend on the Icom programmers getting a few details right; whereas we know that having two exe's in different directories, with all the other files duplicated, will always work.)

The serial ports are not a problem either. Every serial port gets a name in the form COMn. The version of PCR1000.exe I have will take anything from COM1 to COM10.

(Note that your second serial port might not necessarily be COM2! Particularly if you're using USB serial adapters. You can assign the port number by going into Device Manager, right-clicking on the device, Properties, Port settings, Advanced)

There's an option in the program to tell it which port to use. If you follow the copy-the-directory method you will have separate .ini files for your two instances (and you do want this). The first time you configure your second instance to point to the other serial port, it will store this preference in its respective INF file, and you shouldn't have to change it after that.

You can also change the serial port by editing the INF file. Search for the line that says

COMPORT=(some number)

that is, search for

COMPORT=

mine happens to say

COMPORT=3

and change this to COMPORT=4 or whatever is correct for you.

I agree, Ham Radio deluxe is nice, just one little anomaly is the "IF Shift" slider at the bottom I always rightclick on it and select "center", for some odd reason it will show to be center but listening to SSB you can hear it is off to one side, but when you rightclick on it and select "center" it corrects the problem.

Hi..

You may be thinking of "Glabaltuners":-
http://www.globaltuners.com/

Not just PCR's, but many RX's arround the globe made available for other people to use.

http://www.globaltuners.com/receiver/share.php

Gives the info you may need to start with.

However, first register with the site (free) and try a few remote RX's, see if you still wish to make a server available.

It's not dificult, but there are things you need to address, if putting up something that others outside your LAN can access. (Security related, also your ISP may cotton on and object, I've never heard of that happening, but.....)

Plus you need a 24/7 broadband connection to make it worthwhile, and so you can still use the 'net if needed.

Regards.

Dave G0WBX.

Sorry for the noob question, is there any way to fix the COM issues when running Windows 7?

.

Hello Guys and Gals.

Thank you for allowing me to join the Group. I have just bought off Ebay a complete, and 'as new' PCR1000, for the sum of 124 Pounds (150 US Dollars). I hope that I will be able to contribute to the Group from my knowledge database stored in the one remaining braincell of this 75 year old 'Fart', having been a 'Licenced Amateur' (NOT a 'Ham' !!), since 1956, Call G3OBU, but now returning to the hobby after an absence of 25 years,. I have the time, now I have retired, but not the energy !! HI

I firstly ran the PCR1000 on the supplied aerial (Antenna!), and on the ex CB Vertical 5/8 with a 9:1 UnUn outside, and it compared very well with my FRG7700 receiver, so I then purchased a Moonraker HF and VHF Discone, and it now is absolutely outstanding, I am well impressed. Then when I drove a copper pipe into the Ground and coupled that up - even more 'WOW !!' I just need to get the discone up to about 20 feet from its present 12 feet!

I next bought a PC on Ebay to use solely for Amateur Radio Programs - a refurb HP Compac 3Mhz, 1GB, 80Gb SFF for £80 (120 US Dollars), again well impressed when I upgraded it with another 2GB of DDR Memory I had lying around!

I am not particularly 'Techie' - my knowledge revolves around equipment that glows internally in the dark !!!. So may I ask members more knowledgeable than I a few questions?

1. I am using the only RS232 Serial Port on the computer and it only has 1 COM Port (Com 1). Many programs Such as HRD need another Com Port - Is there any way over this ? I was wondering if I could use an external Sound Card (Like 'Extigy') to run the PCR1000 on, and to free up the Com 1 Port?

2. I am using several programs like PCRTalk, DigiPan, MultiPSK, MixW2, etc.., but wonder if anyone has got Bonita Radcom 6 - It appears to be the 'All-Singing, All Dancing' Software !!

3. This weekend (Nov 27 and 28) the DX on Amateur Bands seems to have completely disappeared, couldn't even hear any SSB QSO's - all there was, was loads of CW Ops everwhere in a CW Contest - I did log just one DX one in the Philipenes. Where is all the DX? - We should be in a sunspot max on the 11 Year Cycle, shouldn't we?

Thats about it for now - hope I havn't bored you all too much, and I am sure I will have other questions, as I get deeper into this great little Receiver!

Kindest regards, es 73's

John

Greetings John :-)

"Hello Guys and Gals" = shades of Sir Jimmy Savile + Radio Luxembourg? (and strange exchange rates too!) but 124 pounds is pretty fair for a nice PCR1000. Especially should it have the UT106 DSP option.

Your discone antenna seems pretty reasonable as PCR1000s can be overloaded by long untuned antennas. High and clear with a good ground always advisable. The Rx front end is relatively broad so a preselector or ATU can make a difference.

What you say of your computer suggests it should have PCMCIA card slots and one or two USB sockets. This gives you the option to add USB to serial adaptors as much discussed in prior forum posts. Some can be problematic but I get good results with one from Maplin (etc) that has a "Profilic" chip. Device Manager shows it as it as "Profilic USB-to-Serial Comm Port (COM4), 9600, 8, none, 1, none.

I haven't read much to attract me to Bonito and the supplied ICOM software has its uses with added .mch files but my favourite is Ham Radio Deluxe (one serial port suffices). Audio from the receiver is via a mono adapter to my Soundblaster Audigy card Aux input.

As to HF reception conditions, the receiver is amply good enough to prove that when they're bad - they are bad!

Try these sites....
http://www.solen.info/solar/
http://dx.qsl.net/propagation/

Hope this helps :-)

Fred.
P.S. Perhaps worth mentioning that current weather yet dry humidity makes static precaution worth considering - amazing how it can build up in heavy snowfall!

.

Thank you Fred for your speedy and very helpful post.

I seem to be almost there but I want to take your comments on board ... I will certainly either make or buy an ATU - - however I have never seen one that covers from DC to 1300 MHz, so I may need to resurrect my non-existent constructional skills !!

I have a shortcut to a 'Solar' Data site, and have been watching the predictions, etc for a couple of weeks. It would appear we will get a sunspot maxima now in 2015 , instead of the expected one 11 years after the last, in 2000 !!

The computer I bought (a Small Form Factor HO Compaq), has 7 USB Ports!! So no problems there.

Do the UT106 DSP Modules ever appear on Ebay, or where else will I find one at a reasonable price, do you think ?

OK, so I am thick !! I only need one physical Com Port and have one, into which goes the Serial lead from the PCR1000. I have no use for another Physical Com Port, but need at least a Com 2, that software can use. If I Install a Serial to USB converter and don't physically use it, will a 'Com 2' appear on the PC?

Its an odd PC, as it has no line in, just a 'Mic In' which I am using as the input, and no 'Line Out', so am using the headphone socket, both on the front panel of the computer. Yet another suprise.... the computer has a quite good internal speaker! - I use this when the Lesser Half is out of the room, or plug in headphones to mute the internal speaker. This was my reasoning regarding using an external sound card. As the computer is Small Form Factor, I would not get a decent Sound Card to fit.

HRD won't run without a second Com Port on this 'set up' - when I load it, it stops the Receiver. I really prefer, rather than the supplied software, the TalkPCR and MixW. I also have DigiPan, Zakanaka, FLDigi, MultiPSK and several others on the Hard Drive.

My main SWL activity seems to centre around CW, I can still read morse up to about 25wpm ..... even after about 25 years of not hearing any - It must be like riding a bicycle - you never forget!!! I also listen to SSB and PSK31 transmissions on the Amateur Bands.

I have all the local VHF and UHF Repeater frequencies, but have not heard much activity on these, but more from Air Band frequencies at Manchester, Liverpool and East Midlands Airports Approach, Tower, Radar and Ground Frequencies. FM Broadcast reception is superb quality, receiving Local, Birmingham, Liverpool and Manchester Stations.

Today I have put Ferrite clamps on all wires at terminal ends, as well as the mains leads to the 2 Monitors, 2 computers and external Hard Drive. I have also coupled the Receiver Earth with flattened co-ax outer sheath from the receiver screw post to the 2 computers. The noise floor has dropped by about 1.5 'S' Points on 80 Metres. which was the noisiest band.

Finally, your comment regarding my conversion 'Maths', Pounds to Dollars at circa 1.5 to 1, is particularly relevant, as I have only recently returned from America after 10 years working there, together with my almost new American wife !! Until we retired when I was 70, we were both musician / entertainers, mainly on the cruise lines out of Tampa, Florida. Sadly at our age, and without Pension or Health Care Insurance, we had to return to snowy UK !!

Well folks - that was another 'ramble' from this old Fart !!!

Kindest regards 73's, etc.. from

John

5628. Amateur Call Sign Prefixes and Countries List, plus Modes Frequencies.

Yahoo group: PCR1000
Date: 2010-11-29 14:30:07 UTC
From: Music Maker
Topic: 5628 Message: 5628

.

I have just uploaded two (printable - 20-odd pages!!) Files into the Files Section. Firstly a complete list of Amateur Call Sign Prefixes, listing the Associated Country.

Secondly, a file (1 Page!) of Amateur Mode Frequencies for each Band for the various Modes, - CW, PSK31, RTTY, SSTV, etc for each Band.

I hope these are useful to someone !

Regards,

John

You're welcome John,

I've never seen a DC to 1,300Mhz ATU either but appreciate your jest :-)
I sometimes browse e-bay and have seen several UT106 but none just now apart from one within a PCR1000. Phone around the dealers and see what transpires?

My PCR1000 then UT106 were among the first available and I've enjoyed faultless performance since initial ICOM power supply problems were sorted out. The result collates to give it 12 Volts regulated and it will run cool and stable.

There's nothing "thick" in asking about the potentially complex subject of serial communications (legacy and USB). Your inbuilt port would be COM1 by default and an installed but unused USB to Serial converter can be what you set or change as a serial connection - COM2 is fine.
Should you later add a third port, make it COM5 (as COM1/3 or COM2/4 combos can be awkward for technical reasons).

I'm puzzled about your HRD experience that suggests a settings conflict - also - could your computer soundcard have any option to select between Mic IN and Line IN at the same socket? It might help to check software is latest for chipset and there might be options per the mixer device settings.

It would be interesting if you were to list the programs you've found as ones like Zakanaka are new to me and I find evolving freeware like HRD can be better than commercial software. You're right about remembering morse and I'm confident I've retained skills developed when I was a Marine Radio Officer. I'd be interested in programs that can enhance (or post process) faint speech (and/or Morse) out of high noise and interference.

Also - good effort ref ferrites and grounding - we live in a mire of local noise and causes that can make 160/80/40 virtually unworkable compared with the good ol' days.
Still, W1AW was coming in quite nicely on 3.581.5 late the other night
http://www.arrl.org/w1aw-operating-schedule

Finally, congratulations on proactivity in companionable comfort (whatever the rate http://coinmill.com/GBP_USD.html) and you're closer to "do" Europe economically if near a major airport as last minute package deals can so affordable as to offset some costs of living at home.
In any case, the weather here's jus' wunnerful and it's surely far too hot and sunny in Florida where I hear tell of Codger farms and Crocagators! ;-)

Regards,

Fred.

From: Dave
Topic: 5630 Message: 5630

Hi..

Sorry, but what "com" issues? You need to be more specific.

For example, what program are you trying to install or run.

What commands are you giving it, and what error messages (if any) are appearing? Or, what is just not working.

If you can, get some screen shots and put compressed versions (the original file sizes will be huge perhaps) in the group file/photo area (if there is space) but remember where you put them, because we'll need to know to find them! Or put them in one of the many public file sharing sites, but again, we'll need a public acessable link to find them.

In Win7, like Vista, XP & 2k, you can use the "PrtSc" button (many systems need you to use that with the "Shift" key held down) to grab a screen shot. Then open "Paint" and use Ctrl+V (Hold the Ctrl key down, then hit V once) to paste the screen shot into Paint. If you need to, crop the image to only show what we need to see, then use "File Save as" and save it as a .PNG That is readable by just about all browsers and viewers on the planet, and the file size is not too bad, plus no detail is lost. Remember where you saved it, and give it a descriptive file name. "com-issue-1.png" for example.

Also, what "Exact" make, model of PC are you using, what processor and (hardware) ports does it have, and what "exact" version of Windows 7 do you use? In particular 32 or 64 bit. Right click the My Computer Icon, and select Properties, to find that out.

Sometimes also knowing what security/AV software is running can help people understand too.

Sorry if this sounds abrasive, but without knowing more of what you have, and what you're trying to do with it, plus what errors you're seeing, it's nearly imposible to help.

Oh, I guess, include what type of PCR radio, just for completeness, and how youre trying to connect it to the PC.

We have just put a new measuring system in at a customer for work, and that uses RS232 to connect to the hardware. The PC was a new DELL of some description, with Win7 Premium (32bit) I think and a built in COM1: port, there were no port issues at all. It just worked fine, straight out of the box.

If it's USB<>RS232 adapter COM port reassignment problems your having, like the virtual port moves arround each time you connect the adapter,

then that is fixable. Much has been written on the web about it, but if you can't find that, come back hear. Sorry, but I'm doing this email by remote control, and I don't have easy access to my collection of "usefull links" just now.

Best Regards.

Dave G0WBX.

Sent from my home PC, under remote control of my desk PC at the office 25 miles away, because I hate crackberries and all other pretentious over priced mobile hardware! :-)

Welcome John.

You're also welcome to keep an eye on my HF propagation monitor here in the UK. But yes, reception varies a lot on HF. All part of the fun.
http://g8kbv.homeip.net:8008/Faros/ibp-at-wbx.html

It's live(ish, in as much as that page updates each hour) And the RX is a PCR-1000 too (at the moment.)

There are other similar monitors about, find them by following the links on the left of that page.

In HRD (and other programs) you can freely select which com port to use, but note, that you (normaly) cannot share such a port between two programs that try to control or monitor the same piece of hardware. (Well, it can be done in special circumstances, but more later on that if needed.) It's as much a limitation of the PCR as anything else.

You can't use a soundcard to control a radio, but you can use it to record and process what comes out of one. Or, indeed, with a SDR front end, it and software in the PC "becomes" the radio! See the links on my 5MHz beacon monitor page:-
http://g8kbv.homeip.net:8008/60m/ral-at-wbx.html

You can (with a transmitter of course) use it to generate the needed tones for RTTY, slow scan TV and 100's of other "data" modes.

Look up also a program called FLDigi. Multi mode, with some radio control facilities too. It has the look and feel similar to DigiPan. It's also 100% free too (and cross platform, so not just Windows users can play.)

Going back to the PCR-1000. I'd be interested in your views regarding it's strong signal handling. Mine is getting clobbered by something at night mostly, often resulting in a spurious continuious ragged tone dead on 14.1MHz, that is why the 14MHz beacons don't appear as often as they might on my monitor. The old IC-R70 I used to use, had none of those issues (but it has plenty of others.)

As for the Sunspot cycle, we're all still waiting for that! :)

Enjoy listening, while you can. Please take at least one look at:-
http://plt.g7cnf.me.uk/
http://www.ukqrm.org/

Power line networking is a very real threat to the radio spectrum everywhere.

Regards.

Dave G0WBX (G8KBV)

I'm refreshing Dave's question from awhile back to see if somebody had known or learnt or developed a way to control a PCR1000 thru the use of the OmniRig CAT control.

Thanks!

Pedro.

I've have had my PC-R1000 under OmniRig (and Faros) control for over a year now, but doing it was not without issues.

The radio does not support reading back the frequency or filter settings, (that Faros requires) so I had to make a small "Helper" program to put in between OmniRig and the PCR to "fake" that function.

(I originaly did this for someone else, using a borrowed PCR. The radio I now have, as after I had returned it to it's owner, they decided to sell it, so I gave it a permanent home.)

You are welcome to use my "helper" program if you wish. I've put the needed files, and a description of how to use them, in the folder:- 'PC-R1000_OmniRig' in the Files section of this group.

Feel free to use or abuse as needed. No warranty etc, if it works for you, great, if not, talk to me and I'll see what I can do.

Please make sure with your AntiVirus tools etc, that the files are "Clean". I've taken all reasonable precautions, but don't take my word for it, do your own checks! If something bad got in since it left here, it's not my fault, so don't come running to me....

Right clicking the .exe, and selecting properties, reports this here on my system. Size: 410 KB (419,840 bytes) (The same for Size on disk!)

The program DOES NOT have any IP networking abilities, so will not "phone home" (or anywhere else!) It just uses two serial ports to do it's work.

If you find it usefull, and we ever meet, you can buy me a beer. If on the other hand it causes you problems, & if we ever meet, I'll buy you a beer! :)

Best Regards.

.

Hello all,

Thanks for the responses Fred and Dave (Plus 3 other members who have contacted me directly via T'internet).

I didn't reply instantly, as I had things to do before I replied.

1. I bought a USB to Com Port adapter, which I set up as 'Com 3' - but sadly doesn't want to be accepted by any of my software programs! I particularly went for the one with the recommended chipset! Experiment a failure. However Ham Radio Deluxe decided to work, and I must say how impressed I am with it. Certainly an 'All in One' solution to Amateur Radio multimode operation - and free too !!

2. I also bought 4 X 5ft interlocking steel poles set from 'Nevada' to get my HF and Discone antenna up a few feet higher, but poor conditions on HF have only allowed me to receive Spanish, Asiatic Russia, Azores, etc., as about my most distant stations received with stacks of Italian, German, French all coming in at over S9 - but no DX or North America!! Mostly in BPSK31 mode on 40m, but on SSB, very little at all on any band!! On Sunday mornings I like to listen to all the UK Amateur regular 'ragchewers', and heard none !! However, I do live in an 'Old Farts Bungalow', on a large estate, so my QRM and floor level noise is quite high.

Dave asks about what I call 'Front End Overloading' by QRM (Getting Clobbered he calls it !). Well Dave, I guess you (and I) need a pre-selector - with accept and reject circuits. Quite easy to make from old ATU bits. One is to use the tuned coil and capacitor in series, the other is to use them in parallel - add a little RF Amp after the coils to boost the accepted signals and Unc's your Bobble! Trouble if you use a 'General' attenuator is that you are cutting everything down, including your wanted signal. Two variable 'Notches' that you could tune to each side of the signal could help too, maybe.

I have no facilities now for construction projects, so am going to bid for an ATU and pre-amp when I see them on Ebay, unless anyone in the group are selling any. I bid on a Yaesu 7700 ATU last week(there is also a matching pre amp), but it went into the 'silly money' region at over £80 !!

On US Ebay they are selling the Icom UT 160(?) DSP unit new at about £60 plus about £10 postage. I am very tempted.

Fred asks what programs I am using. I am experimenting with all I can find, Fred. So far my favourites (for different reasons in each case), are HRD, MultiPSK and WinMX for digital Modes, with CW Skimmer and CWGet to read morse faster than my one remaining brain cell can keep up with. I use MMSTV to read Slow Scan TV on 14.230Mhz. I also have FLDigi, Digipan, MMVARI and Airlink Express.

Radio Control Software - Now that I have either downloaded, amended or written new frequency lists into about ten different files, I just love TalkPCR - it certainly is the most user friendly program. I also have the original PCR1000 supplied software (rubbish, but beautifully skinned!!), plus PCR Pro, Trunk PCR, Icom Control, Radio Control and RX-PSK31. Wouldn't TalkPCR be great with a skin like the ICOM one on it? !!

As well as Daves propogation page, I also use the SolarCycle24 website.

I still have to get 'into' VHF and UHF listening and scanning as have only heard a couple of transmissions up there - Manchester Airport Approach, and the local 2 Metre calling frequency. I never did VHF when I was a transmitting Amateur, so know less than nothing about anything above 30 Mhz. It should prove an aborbing and interesting learning curve !!

I have all the 80 channels of CB as a Frequency list (plus the pirate ones), which I can leave scanning, and even in a large city like this, I have only heard one CBer - CB seems to have died a death!! I used to have some real laughs listening to the Muppets years ago!!

Thats about it for now .... I am on 'Facebook' if anyone wants to chat further, or look at all my photographs - past and present. Just search for 'John Haddleton' - if you find a tall, dark, handsome and well educated fellow - then you have the wrong fellow !!!

Kindest regards and 73's to all ....

John.

Greetings John,

(As I indicated before) If your inbuilt port is COM1 your COM3 problem will be because COM1 and COM3 share the same interrupt and can/will conflict (as do COM2 and COM4). Make your second port COM2 or 5?
Plenty about this online e.g. http://tinyurl.com/35yhbkz

I'd also advise against a RF preamp because they can be such non linear CRUD gatherers. The PCR1000 has good sensitivity and will benefit most from an ATU "shaping up" wot squirts in.

60 Quid for a UT106 seems an average price and although by no means essential, it's good at ridding whistles. Install with care because it lies within the receiver as a loose little board in a plastic sock and has delicate cables.
A copy here http://tinyurl.com/3aapgkn

Interesting range of programs. Have you found any freeware that automatically receive HF Weatherfax particularly well?

Gotta go.
BCNU :-)

Fred.

.

Hello Peeps,

Firstly, a big bundle of 'Thank You's' to responders both on the Group, and by Email. Lots of helpful advice, hints and Tips.

I have changed the 'dummy' Com Port to 'COM 2' and it now works fine.

Invested £18 on Ebay, and bought a Howes (Kit made up) ATU, which I have modified with a DPDT switch to throw the Coil and Variable Capacitor into Series or Parallel, which works well as a reject or accept a signal on frequency reasonably well up to about 60Mhz - I can knock down QRM considerably with it. I am just experimenting with some fixed capacitors to see if I can switch them in to extend the range. At £18 it is not of great consequence if I drill holes, etc.

Last week I ordered a NEW UT-106 from Miami, Fl. for 90 dollars (56 UK Pounds)... Same price avaiable from Taiwan, but they eat dogs, so I bought from USA!!! He has a few more for sale on US Ebay, if anyone wants one - here .....

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=360326968278

Although they are 58 Pounds, compared to UK Shops at 99 - 106 pounds, you will have to pay import duty and carrier admin charges of about 20% extra - but still a lot cheaper.

This morning, I had a field day on 7.035 Mhz BPSK31,(USB), heard India and Argentina - both were using less than 50 Watts input - amazing!! I couldn't hear either on my FRG 7700 !! I feel sure that this little receiver will outperform most receivers up to the 500 Pounds value.

Please, could someone advise me how I can post in the 'Files' section here my .fql files from PCRTalk, so they can be used by other members (in UK of course). Also how do I turn those already posted .fql files, which are columns of numbers separated by commas, into lists for my own use?

I am off to sunnier climes for my Old Farts Sunny Christmas Vacation (The Gambia) staying with my Daughter for a couple of weeks but will be back for the New Year, when hopefully, I will be able to report my conclusions on the UT-106. So may I wish everyone a Very Happy Christmas, and that Santa brings you that Racal or JVC Receiver - Lots of DX, Health and Money in 2011, and all you would wish for yourselves.

Once again - thanks for the help and advice,

John

PS.... Almost forgot, I have just started an ICOM PCR 1000 Users page on Facebook, which I will give some attention to when I return from the Tropics to this frozen land! Idea there is to post instant reception reports as the main feature, as well as 'instant chat' which

is not possible with Groups. Please feel free to use it as you wish

.

Mostly in BPSK31 mode on 40m, but on SSB, very little at all on any band!! On Sunday mornings I like to listen to all the UK Amateur regular 'ragchewers', and heard none !! However, I do live in an 'Old Farts Bungalow', on a large estate, so my QRM and floor level noise is quite high.
>
>
>
> Dave asks about what I call 'Front End Overloading' by QRM (Getting Clobbered he calls it !). Well Dave, I guess you (and I) need a pre-selector - with accept and reject circuits. Quite easy to make from old ATU bits. One is to use the tuned coil and capacitor in series, the other is to use them in parallel - add a little RF Amp after the coils to boost the accepted signals and Unc's your Bobble! Trouble if you use a 'General' attenuator is that you are cutting everything down, including your wanted signal. Two variable 'Notches' that you could tune to each side of the signal could help too, maybe.
>
>
>
> I have no facilities now for construction projects, so am going to bid for an ATU and pre-amp when I see them on Ebay, unless anyone in the group are selling any. I bid on a Yaesu 7700 ATU last week(there is also a matching pre amp), but it went into the 'silly money' region at over £80 !!
>
>
>

>
>
>
> Fred asks what programs I am using. I am experimenting with all I can find, Fred. So far my favourites (for different reasons in each case), are HRD, MultiPSK and WinMX for digital Modes, with CW Skimmer and CWGet to read morse faster than my one remaining brain cell can keep up with. I use MMSTV to read Slow Scan TV on 14.230Mhz. I also have FLDigi, Digipan, MMVARI and Airlink Express.
>
>
>
> Radio Control Software - Now that I have either downloaded, amended or written new

frequency lists into about ten different files, I just love TalkPCR - it certainly is the most user friendly program. I also have the original PCR1000 supplied software (rubbish, but beautifully skinned!!), plus PCR Pro, Trunk PCR, Icom Control, Radio Control and RX-PSK31. Wouldn't TalkPCR be great with a skin like the ICOM one on it? !!

5637. not sure what to do with my PCR1000

Yahoo group: PCR1000
Date: 2010-12-20 14:23:20 UTC
From: james
Topic: 5637 Message: 5637

it seems that my PCR1000 has gone south, it still works but i think the receiver has lost about 50% of its sensitivity, it still picks up radio stations (broadcast, ham, & etc...) but not quite as good as it used to when i first got it, it has the UT-106 DSP module installed, if i sell it i want the buying to know beforehand that it is not new and not is the best working order and will either need expensive repair or for pulling a few parts off of and junking the rest.

i checked everything, antenna, coax, reinstalled the operating system and software, (both windowsXP and Linux with wine, and Linux's hamlib & rigctl)

i think i am going to stay away from the SDR and software controlled radios and stick with radios that dont require a computer to use. maybe a nice Icom R75 or Alinco's new DX-R8T will be my next radio.

i live in oklahoma, so if anyone lives close to me wants this unit let me know, i will sell it cheap.

Check that the antenna connector has not lost its ground on the inside of the box. It can happen from repeated installation of the antenna.

5639. Using PCR1000 for Gathering Trunking IDs

Yahoo group: PCR1000

Does anyone know whether there is some software that has been written for the PCR1000 that will allow one to use it to gather trunking group ID's? I know of TrunkPCR, but this software requires one to know Group IDs and Sites, etc. I'm looking for software that will decode trunking signal information.

Can anyone direct me here?

Thanks.

David

Actually, TrukPCR does gather new Talk Group ID's. It's NOT dependant on knowing them first...
In the Trunk Settings, just click on the "Save New ID's When" *Seen* Button, and it will do just that. After clicking the [Trunk] Button, click the manual button and let them fill up...

You can also try Unitrunker...

Wow, Jay! Thanks. I guess I just haven't figured out all the great features of your TrunkPCR yet (which is a great program, by the way!)

That's unfortunate because you may have to spend quite a lot to do much better than a PCR1000.

Is the loss of sensitivity on all frequencies? Is the receiver otherwise fully functional? There are separate RF amplifiers (etc) for below 50Mhz and 50-1,300Mhz with the attenuator the first stage common to both. A quick sniff inside & to check connections is worthwhile. Also, these receivers can run hot and behave oddly if the supply is much above 14 Volts. Some larger unregulated "12 Volt" supplies (and "wall-warts") have been found to deliver well above the maximum 16V recommended.

The better you can check and describe your problem the more accurately a repairer can quote for repair - phone around. If you decide to sell, fuller description should attract better offers - and - you could even get more selling your UT-106 separately because they're still expensive options to buy for other ICOM receivers.
Including IC-R75!

:-)

Fred.

I have an Icom PCR-1000 receiver for sale. The unit is like new, in original box, with manuals, and Icom software. Includes the telescoping antenna, serial cable, and power supply. Works very well, but I have decided I want a shortwave receiver instead of this receiver.

I will ship overseas. Double boxed and well packed.

I am asking $270.00 for the PCR-1000 plus shipping. I might consider a trade for a decent shortwave receiver.

Cash, Check or Money Order. If you pay by check I will probably hold the item until I am certain the check has cleared. US funds only please.

hmm, maybe i will hang on to my PCR1000 until i get my next receiver, maybe the Icom-R75 and if i need that DSP U-106 unit i can just plug & play. i dont spend much time at all above 30 MHZ, i used my PCR1000 mostly listening to HF hams & the occasional shortwave broadcast. i use a uniden bearcat scanner for frequencies above 30 MHZ.

when i first learned about SDR and computer controlled radios i was intrigued by the idea, now that the "new has worn off" i can see the disadvantages to it too, and i believe i prefer my radios to not require a computer to function, as an option it is ok but not a requirement about the only feature i do like on a computer is the bandscope and the PCR1000's bandscope kills the audio if you use it in SSB mode which is unfortunate.

i prefer a tabletop model, and am willing to spend the money for a new one, the R-75 is my first choice, and that new Alinco DX-R8T that just come out sure seems like a good choice too.

thanks everyone, i will look in to the EEPROM issue and the grounding issue, but i think i want a different radio. my last radio before i got the PCR1000 was a HUGE boat anchor made by Drake that i loved until it died after 10 years of service, i think its time for a new boat anchor.

5648. WRTH Schedules now integrated into SWLog!

Yahoo group: PCR1000
Date: 2010-12-25 15:48:34 UTC
From: sillett
Topic: 5648 Message: 5648

Merry Christmas from Shortwave Log!

It is with great pleasure to announce that the 2011 international and selected target/clandestine schedules from WRTH (World Radio TV Handbook) are now available in Shortwave Log. This is indeed quite the Christmas present!

The WRTH Schedules seamlessly integrate into Shortwave Log and can be directly used to identify stations, to tune the bands, or to browse the data grids.

In addition to logging, the Radio Control Server program controls over 40 receivers from 11 manufacturers such as Ten-Tec, Icom, Drake, AOR, Lowe, Yaesu, and Winradio. SDR receivers from FlexRadio and Microtelecom/Perseus are supported. Every receiver can also be configured to stream live on the Internet.

My PCR-1000 is currently online and can be tune remotely. You can access it through the ONLINE section of the web page.

Shortwave Log is soon to celebrate its 20th year! Having started in 1991, the program has expanded over the years into a suite of programs for logging (shortwave and amateur), radio control, recording, QSL management, and enabling receivers to be published online.

Shortwave Log can be downloaded from www.shortwavelog.com

73s and good DXing!

Bob, N3OEA

Strewth! You could have warned about download size!

The program around 46Mb plus required 66Mb + 56Mb + 39Mb + 69Mb in cab, zip, SQL Server, Crystal Reports 2010 (etc) files downloaded + the WRTH data and some audio codecs.

Eventually / eventfully working in the main and thanks for this!

Fred.

5650. The UT 106

Yahoo group: PCR1000
Date: 2010-12-30 11:58:42 UTC
From: Music Maker
Topic: 5650 Message: 5650

.

Hi, fellow 'Ham-sters'

I hope everyone had a great Christmas, and that Santa was good to you.

I arrived back in UK yesterday after spending 7 days with my family in the Gambia, and happily got away before the hold-ups and bad weather here, returning to find all the snow had gone !!

Back to reality for another year!!

Great news!!! I ordered a UT106 from USA for 98 dollars (56 pounds)two weeks ago, and it got to this address yesterday just after me. I was amazed that I had no duty, VAT or anything to pay on it!! Cheapest here was Martin Lynch at £99. The guy is still advertising them on US Ebay, so if you want one - jump in quick !! (RF Components - Walter Zapata).

I have not heard much about the UT106 in use, so was anxious to get it fitted (a doddle!), and try it out in the PCR 1000.

When installed, it automatically places another 'rack' on the ICOM component receiver which is toggled on the tool bar at the top with an Icon called 'DSP' - which even if you don't use the Icom software, is a good check that you have installed it correctly. I didn't the first time, as there is a little 'ribbon' connector that you have to push in to a connector on the UT106 and the IC1000 main board, I got it in the wrong way round!!! (Well, I am 75 with only one brain cell!). The scanty 'destructions' are not too clear on this - but after opening up the box again (8 screws), I then tried changing all the connections with the case open until finally working.

I use 'Talk PCR' as my software interface, and usually MixW as my PSK 31 program, or Ham Radio Deluxe, with MMSTV for Slow Scan TV, and my ears for 'Phone' SSB or CW (Morse)... if the morse goes over about 25wpm, I use CWget. When the UT 106 is installed, with 'TalkPCR' you get a little window on the screen away from the receiver, which allows you to switch it on and off (to use DSP), switch the Noise Limiter on and off, and vary its effect with a little slider, and to switch in and out the notch filter.

Hopefully thinking logically, I decided that to test this little Gizmo, I couldn't rely on my ears - nor did I have any of the sophisticated test equipment required to give a practical and subjective appraisal. What better than the 'waterfall' or 'Spectrum' viewer on a PSK31 program? .... I could SEE the results of clicking the DSP (Digital Signal Processing) in and out, as well as the effect on the 'noise' shown on the waterfall when varying the
gain on the Noise Limiter.

VERY IMPRESSIVE ... on 7.035 MHz at 9pm last night (Wednesday)... PSK 31.. pulled in stations that were hidden in the noise prior to switching in the UT106. Noise level at about half way. I then went to bed, as had been travelling and awake for the last 36 Hours

- not good for this old fart !! Also wife not best pleased that I had done nothing else since getting out of the Taxi home, but to install and mess with radio gear, and eventually going off to bed without a 'Good Night' even, let alone the usual little 'peck' !!

Thursday Morning - 9am - 11.30am - (Other half still in the land of dreams), have been on 20M (14Mhz) Amateur Band. Listened to some RTTY and PSK, (still impressed, and can HEAR the difference when I switch on and off), but now listening to 'Phone' USB - again... Wow!! the UT106 really sorts out the wheat from the chaff, quiet signals, just 'leap out' - Compared all the time, by the way, to switching to the same frequencies with my Kenwood TS520SE Transciever and my 'Frog' Yaesu FG7700 ..... this Receiver totally out performs them both.

Ooooops !! - 'She that must be obeyed' has been activated !! Have you made coffee?, have you fed and walked YOUR dog? Did you go to bed? Are you still playing with your toys?

Oh dear ... I had better switch to 'wife pleasing' mode! and I havn't listened/tried CW yet!! Better go folks - or I won't be having a 'Happy New Year' !!!

I really hope you all do ... (Have a Healthy, Happy and Sunspottted New Year)

Further impressions on the PCR1000 with UT106 will have to wait until next year, I guess. (Its only 2 days!!).

73's de G3OBU ..... or,

Old Fart John

.

5651. The cost of setting up a SWL station with IC-R1000

Yahoo group: PCR1000
Date: 2010-12-31 11:55:53 UTC
From: Music Maker
Topic: 5651 Message: 5651

.

Good Morning 'Hamsters' (my nick-name for SWL's !)

In spite of already owning a Kenwood TS520SE Transciever and a 'Froggy' Yaesu FRG7700, I recently moved into a bungalow with no garden (its a 'communal' one, and with restrictions, so no way to get any wires into the air).

So - accepting that I would have to become a 'Quiet Key' (Rather than a 'Silent Key' (SK SK!).... I decided to re-live my teenage years from 1946 to 1956 as an SWL until I got my Licence in 1956. This just has to be, at 75 years old, my 'Second Childhood' !!!

After scratching around (I don't have a lot to spend!), I fancied the new (to me) Software Defined Radio (SDR), as a challenge to my highly depleted brain-cell count. I couldn't find anything cheap enough, except single channel rigs, so decided to go for the Icom IC-R1000.

Notes...
I managed to get a Discone (with vertical HF whip) up in the air on a 20' steel pole. Bought a used (Ex Barclays Bank - Refurbished) Computer as a dedicated one just for SWL and associated programs. With an on-board 32 bit Sound card AC97, it was noisy - even with all leads having ferrite clamps, so I bought an external Sound-Card - Soundblaster 64 bit / 96 Mhz. Finally, I still had my local QRM from TVs, BT Modems, etc, so I bought an Icom UT-106 Digital Signal Processor from America that fits in the IC-R1000 box.

In hindsight, it may have been a lot cheaper to buy an NRD 512 or a Racal, etc - but I have had fun, and now have a fairly good SWL station, receiving all modes from 10Kcs to 1300 Mc/s (We didn't have any Hertz, Resistors, Capacitors, Tubes, Transistors etc when I was an SWL 60 years ago !!) Our receivers glowed in the dark from the filaments in the Valves (Tubes to you!). We tuned with a Variable Capacitance, used Resistances, and measured frequency in Cycles! We almost invariably built our own stations around an ex-WD RCA AR88, HRO or R1155 Receiver, that cost about 10 pounds, and when I first got my 'ticket', the first transmitter I built was a 'lash up' of a single 6V6 Valve, and a coil wound round a toilet roll centre!! On 4 watts CW in 1957, I got my DXCC (worked 100 Countries) in 4 months!! Can you imagine working New Zealand or Oz today on 4 watts to a G5RV?

I digress (as ever!) I wanted to quote how much this project has cost - everything off Ebay !! So here we are :-

Icom PC R1000 (Mint, in box, etc) 104.00
UT 106 DSP Module (new) 58.00
HF, VHF & UHF Discone (new) 36.00
4 X 5ft Steel Poles (new) 32.00
30ft Coax, Pluggery and self amalg tape (new) 21.30
4ft Copper earth rod, thick wire and clamp (new) 19.40
Used SFF HP Compaq Computer (Refurbed to 'as new') 62.00
3 extra Gigs of RAM (used) 21.00
19" Flat Screen LCD Monitor (used) 60.00

Global AT-1000 ATU (Waste of time !!) 18.00
10 Ferrite cable clamps (new) 10.00

Total .... 442 GB Pounds (or about 660 US Dollars !)

I am a retired Musician / Entertainer - mainly on Cruise ships out of Miami, Florida, and still play - mainly for my own entertainment.
I recently bought myself a new keyboard (my Organ was too big to go into this bungalow, as well as my over-size German Shepherd !), so I bought a Technics KN6500 Keyboard (Google it to see!).

A 10 year old keyboard for 300 pounds (450 US Dollars) - so as a gift to you all, here is 2 Hours of me playing your favourite tunes. Click on the link, and eventually a player will appear - click on the little arrowhead at the bottom left of the player, and enjoy (or otherwise !!).

http://www.4shared.com/audio/Bjx54Ouh/KN6500.html

Which was the best bargain off Ebay? - My keyboard or the SWL Station - you judge !!

Happy New Year Everyone !!! de G3OBU., or

'Old Fart' John

Subject: [PCR1000] The cost of setting up a SWL station with IC-R1000

.

Good Morning 'Hamsters' (my nick-name for SWL's !)

In spite of already owning a Kenwood TS520SE Transciever and a 'Froggy' Yaesu FRG7700, I recently moved into a bungalow with no garden (its a 'communal' one, and with restrictions, so no way to get any wires into the air).

So - accepting that I would have to become a 'Quiet Key' (Rather than a 'Silent Key' (SK SK!).... I decided to re-live my teenage years from 1946 to 1956 as an SWL until I got my Licence in 1956. This just has to be, at 75 years old, my 'Second Childhood' !!!

After scratching around (I don't have a lot to spend!), I fancied the new (to me) Software Defined Radio (SDR), as a challenge to my highly depleted brain-cell count. I couldn't find anything cheap enough, except single channel rigs, so decided to go for the Icom IC-R1000.

Notes...
I managed to get a Discone (with vertical HF whip) up in the air on a 20' steel pole. Bought a used (Ex Barclays Bank - Refurbished) Computer as a dedicated one just for SWL and associated programs. With an on-board 32 bit Sound card AC97, it was noisy - even with all leads having ferrite clamps, so I bought an external Sound-Card - Soundblaster 64 bit / 96 Mhz. Finally, I still had my local QRM from TVs, BT Modems, etc, so I bought an Icom UT-106 Digital Signal Processor from America that fits in the IC-R1000 box.

In hindsight, it may have been a lot cheaper to buy an NRD 512 or a Racal, etc - but I have had fun, and now have a fairly good SWL station, receiving all modes from 10Kcs to 1300 Mc/s (We didn't have any Hertz, Resistors,

Capacitors, Tubes, Transistors etc when I was an SWL 60 years ago !!) Our receivers glowed in the dark from the filaments in the Valves (Tubes to you!). We tuned with a Variable Capacitance, used Resistances, and measured frequency in Cycles! We almost invariably built our own stations around an ex-WD RCA AR88, HRO or R1155 Receiver, that cost about 10 pounds, and when I first got my 'ticket', the first transmitter I built was a 'lash up' of a single 6V6 Valve, and a coil wound round a toilet roll centre!! From: pond.james_pond
Topic: 5633 Message: 5653

Many thanks for this work Dave, it is very much appreciated. I've attempted (and failed) to produce a pcr1000 config file to sync the rig with HDSDR (formerly WinradHD). I'm using a Softrock v9 to monitor a 10.7 MHz pcr1000 IF tap. The IC-PCR1000.ini you have provided works perfectly for this purpose, and doesn't require the virtual-null-modem or helper program to achieve sync'. Great work.

I have one request if I may. Could you please indicate what changes are needed to the 'set frequency' string (Command=4B30.00.000000.000000.000000.3033.3030.3030.0A) in order to start the pcr1000 in AM mode @ 6 KHz filter width. This would be a big help in getting my head around the protocol. Many thanks again.

Hi Hamsters,

Wonder if anyone could advise me. I have just spent 36 hours solid - at my desk, as my computer (on WinXP) crashed whilst it was installing the usual useless Windows updates. After hours of trying everything I know (not a lot!), I gave up and formatted my Hard Drive - losing everything. Fortunately unreplaceable stuff was already stored on my external Hard Drive.

My wife has the Vista CD and Authenticity for her laptop - So I am now on Vista Ultimate. Finding correct Audio and Video Drivers for this ancient HP Compaq SFF 'Puter, plus redownloading and installing all the programs I use took the whole of New years day!

I think due to my performance figures over the last 3 days, I am about to get papers for divorce!!

All other PC R1000 programs have re-downloaded and work fine, but I just can't get TalkPCR to load or run properly, and I have downloaded from several sources to try them all!

When I install, I get Pop ups, - 'Cal15 not found,Cal Dbm Functions will not work correctly', - or saying it cant load various components - It still works, however - but the 'S' meter doesnt, and it won't shut down - when I try, it gives me another pop up, saying it 'Failed to set data for 'ProcVal' every time I hit the 'X' to close it. When I shut it with 'End Task' from the Task Manager - I lose all the the FQL files.

I have little hair left, and the way I am tearing it out now will leave me with none !!

On another (and more happy) note .... Today (Sun 2 Jan) and at the moment, HF bands are 'humming' .... getting the best and strongest reception on 14 and 21 MHz Amateur I have heard since I bought the PCR1000 over a month ago. West Coast US stations on 14Mhz SSB coming in at over S9 from 8am and still there now at 11.30am just off my discone antenna !! or is it due to my new UT-106? Bodes well for 2012. Have a good one !!

I have a PCR1K in excellent condition. I do not have the manual (downloadable here http://www.icomamerica.com/en/downloads/Default.aspx?Category=122)

It will be shipped with original Icom and original Bonito software CD's, Icom power supply (wall wart), original telescoping antenna and serial cable.

$260 + shipping via PayPal only.

Please email direct with any questions.

Hi John,

Old farts and hamsters indeed! Hrrumph!
What provocative nomenclature must your esteemed spouse suffer?!

Your problems are unlikely to have ended as the dreaded Vista is the stuff of gastric revolt where driver problems, speed, compatability issues and resource constipation is concerned. Microsoft really shot itself in the foot by inflicting Vista and its need for more powerful computers.

Windows 7 is becoming what Vista should have been (will run on far older computers too) but many like I still favour XP. With Service pack 3 it's proved extremely stable (but I still regularly backup each partition).

As a side project, to make your PCR1000 PC independent, try an old Palm Pilot with the IP1kc program found in this forum's files section. I use Palm Pilots type VIIe and M100 with adapted cable connectors (bought for pennies at car boot sales).

Meantime I suggest you crave your wife's indulgence (by the usual methods), reinstall XP - and keep your hair on!

:-)

Fred.

James.

Sadly, I'm 200+ miles from the shack at the moment, and don't have my PCR1k notes with me. (I nearly brought it, but I have other toys with me for other projects at this time.)

If you google for "pcr1000 protocol" you will with a bit of digging, finde any number of documents created by a few people who hacked the link between the Icom program and the RX. That was the only way, as to my knowledge, Icom never publicly made the protocol available.

I have found where I've stored the documents, but I cannot send attachments through this list. I need a direct email address.

Have you checked the group archive/file area? I think I did find some of the info I have in there in the past.

PM me with a direct email, and I'll send what I have as an attachment.

Note though, that the Frequency, Mode and Filter settings are combined into one command, this makes indipendant control of these param's via OmniRig, somewhat "problimatical" to say the least.

But if you change the "K" command according to this, it may help

Frequency: K0GMMMKKKHHHmmff00
where K0 G MMM KKK HHH mm ff 00
G=GHz
MMM=MHz
KKK=KHz
HHH=Hz
mm = mode
ff = Filter
00 = Padding Bytes (always there)

Mode Settings:
00 = LSB
01 = USB
02 = AM
03 = CW
04 = Not used or Unknown
05 = NFM
06 = WFM

Filter Settings:
00 = 3 Khz (actually 2.8 Khz) (CW USB LSB AM)
01 = 6 Khz (CW USB LSB AM NFM)

02 = 15 Khz (AM NFM)
03 = 50 Khz (AM NFM WFM)
04 = 230 Khz (WFM)

Cheers.

Dave G0WBX.

Have you tried running the executable in compatibility mode?
http://www.howtogeek.com/howto/windows-vista/using-windows-vista-compatibility-mode/
Better still, as glenndriech suggests, get rid of vista.

SDR's are terrible things.. Once you've got one the rest of your HF receivers become redundant. ;)

.

Gidday Fred,

(As our Antipodean cousins would say! - We won the Ashes, so lets celebrate!))

Thank you for the encouraging response to my computer related problems !! However, having jumped through a thousand hoops to reformat, and re-install a new OS and all my programs, I am somewhat reluctant to repeat the operation to re-install Win XP - but I must admit, having used Vista now - I certainly understand your point.

Having spent (it seems like) another whole day trying to get TalkPCR running, I have 'sort of' rectified the problem. It does a quick program load (about 3 seconds after you hit the 'run' button), and it then works as it should).

I can now report I am totally happy with my PCR1000 and the ancilliaries - having had a great day as a SWL yesterday when conditions certainly lifted for the first time for a while - logged loads of long distance copies mainly on 20M. They Included several West Coast USA, Chile, India and Bahrein. Best one (for me), was Israel on BPSK31 only running 25 watts. I can't wait for conditions to improve to better levels - but trouble is, I can't power up my trusty old Kenwood TS 520 SE any more. Compared to the PCR1000, its stone deaf anyway! Perhaps needs re-alignment and Caps renewing after over 30 years of use and untouched ? HI !!

Fred, after your very interesting response, I searched Ebay for 'Palm' M100' - and there appear to be loads of 'em, and at my price level (99p). Is this the best type for the job, as there are lots of other models at similar 'silly' prices?.

I wonder if we could do a complete idiots guide in this Forum, with me playing the part of the idiot (I am good at that!), and yourself as the guide and mentor - so that other members could follow step by step, from my purchase of a suitable 'Hand Held' on Ebay, through to getting the PCR1000 on the air using it? This could obviously be done by telephone, Email, PM, etc.., but I feel it could be of use to others to join in or to take the step with confidence, if we did it openly in posts on the Forum.

If you are willing to have a go at this (and have the time and effort needed), could we start by you looking on Ebay at the many Hand Helds on offer there, and suggesting a few that have 5 or more days to run (due to non-instant receipt of posts in Yahoo Groups), and I - and perhaps other members can bid on one of them ... however - firstly we have to agree not to bid on the same item !!!

Interested, Interesting? - Any other members want to join in?
Is this a sensible proposal?

73's de G3OBU (Licence about to lapse!), or

John (The Old Fart)

PS 'Her indoors' (or, My lovely sweet American 'Child Bride',(she is over 20 years younger than me, at 53) - I put there in case she should read this!) has been placated with a bunch of 11 Red Roses (she is the twelfth !) - Thanks to Interflora!, and an economy sized box of Ferrero Roche - Thanks to Shell Petrol Station Forecourt - (I have already Bagged the plastic box for keeping screws in when she finishes 'em).

From: Music Maker
Topic: 5661 Message: 5661

.

Hello Hamsters....

Just a thought !! I have spent a lot of time, effort and midnight oil classifying and saving Frequencies for the TalkPCR Interface. I wonder if other members would like to post theirs in the 'Files' section of this Group. I realise that many will only be of use to other members in the same area or Country. I will post mine if anyone is interested. I am in Stafford, UK. So please PM me.

I have yet to make files for Banks/Channels for PcrPro, Icom PCR1000, etc. That I also use.

Mine are Classified in Bands as follows (with UT-160 settings as well)

FM Broadcast Frequencies
Medium Wave Broadcast Frequencies
Short Wave Bands
Short Wave Stations
HF Amateur Radio Bands SSB Phone
HF Amateur Radio Bands (Digital Comms and SSTV)
VHF Amateur Bands and local Frequencies
CB Channels, and Pirate Frequencies
Air Band - Local Airports
Civil Aviation Frequencies

73's de G3OBU, or

'Old Fart' John

G'day 2U2 John :-)

Forgot to say thank you for sharing the MP3 download and as to whether the keyboard or PCR1000 were the better bargain - it's evident how both have extreme merit!

The chocs and eleven red roses for your special twelth is a rather charming acknowledgement of values. "Happy Wife, happy Life" as some might say - remembering that they (and cats) come from the same factory and work to rules of adaptive deciding. (I keep a bottle of Moet + colourful card hidden in the garage for exingencies like forgotten notable dates).

You've found that installing an operating system and getting it as you need it to be is a long awkward task. I'm glad your machine can work with Vista but can only repeat my caution. As an alternative suggestion to XP, if your wife's portable was supplied with Vista it will be quite powerful and probably recent. It is likely to work appreciably better with Windows 7 and you might still have a dealer option to obtain Windows 7 economically - and also "test it out" on your older computer. (It is said there are ways to openly extend its trial period).

Regarding Palm Pilots - They're old by now and condition can be subjective on E-bay where postage would probably be more than what I paid for both! I'd wait until car boot sales or a hamfest where you can inspect and haggle.
The one I like best is the Palm Pilot VIIx because of its useful desk stand. My M100 has no stand but its cable fits either Palm. I don't know which others are compatible beyond that a Palm Pilot 5000 wouldn't work for me.
The in-line adapter is two DB9M connectors Araldited solidly together and wired 2&3 crossed (TXD&RXD), Ground=5, 7&8 crossed (RTS&CTS). Note that the IP1kc program is great for what it does with a Palm Pilot as a PC independent control head but has no UT106 function.

As to mentoring, I can only relate such experience as I've gained since July thanks to the outstanding contribution here of Iain, MM0BFF who had tweaked the original program version to as you'll find in the files section.

Dunno what to suggest ref your TS520 but manuals seem available e.g.
http://www.kg6haf.com/kenwood.html

Regards,

Fred.

     .
Gidday Fred,

(As our Antipodean cousins would say! - We won the Ashes, so lets celebrate!))

Thank you for the encouraging response to my computer related problems !! However, having jumped through a thousand hoops to reformat, and re-install a new OS and all my programs, I am somewhat reluctant to repeat the operation to re-install Win XP - but I must admit, having used Vista now - I certainly understand your point.

Having spent (it seems like) another whole day trying to get TalkPCR running, I have 'sort of' rectified the problem. It does a quick program load (about 3 seconds after you hit the 'run' button), and it then works as it should).

I can now report I am totally happy with my PCR1000 and the ancilliaries - having had a great day as a SWL yesterday when conditions certainly lifted for the first time for a while - logged loads of long distance copies mainly on 20M. They Included several West Coast USA, Chile, India and Bahrein. Best one (for me), was Israel on BPSK31 only running 25 watts. I can't wait for conditions to improve to better levels - but trouble is, I can't power up my trusty old Kenwood TS 520 SE any more. Compared to the PCR1000, its stone deaf anyway! Perhaps needs re-alignment and Caps renewing after over 30 years of use and untouched ? HI !!

Fred, after your very interesting response, I searched Ebay for 'Palm' M100' - and there appear to be loads of 'em, and at my price level (99p). Is this the best type for the job, as there are lots of other models at similar 'silly' prices?.

I wonder if we could do a complete idiots guide in this Forum, with me playing the part of the idiot (I am good at that!), and yourself as the guide and mentor - so that other members could follow step by step, from my purchase of a suitable 'Hand Held' on Ebay, through to getting the PCR1000 on the air using it? This could obviously be done by telephone, Email, PM, etc.., but I feel it could be of use to others to join in or to take the step with confidence, if we did it openly in posts on the Forum.

If you are willing to have a go at this (and have the time and effort needed), could we start by you looking on Ebay at the many Hand Helds on offer there, and suggesting a few that have 5 or more days to run (due to non-instant receipt of posts in Yahoo Groups), and I - and perhaps other members can bid on one of them ... however - firstly we have to agree not to bid on the same item !!!

Interested, Interesting? - Any other members want to join in?

Is this a sensible proposal?

73's de G3OBU (Licence about to lapse!), or

John (The Old Fart)

PS 'Her indoors' (or, My lovely sweet American 'Child Bride',(she is over 20 years younger than me, at 53) - I put there in case she should read this!) has been placated with a bunch of 11 Red Roses (she is the twelfth !) - Thanks to Interflora!, and an economy sized box of Ferrero Roche - Thanks to Shell Petrol Station Forecourt - (I have already Bagged the plastic box for keeping screws in when she finishes 'em).

From: W5UHQ
Topic: 5637 Message: 5664

I keep seeing the term software defined radios in reference to the PCR-1000 and it's cousins.

This "no control panel radio" is no more software defined than my ICOM 756 PRO II which can also communicate with a PC for most RX functions.

It it is just a regular wideband hardware based receiver without a front panel.

Using the RS-232 interface to replace knob clicks does not come near to being a truly software defined radio which does all the classical receive transmit signal processing with user software algorithms and uses the box as an engine to run those programs.

Guess we could call it a hybrid but it does not come close to it's cousins that do everything except the front end signal conditioning and final amplifier functions (kind of hard to yet) with software based digital signal processing algorithms and not a set of "do this" and "do that" commands to the hardware circuits hidden in the box.

Go ahead and call it a SDR if you please...but I still see it as an ICOM 706 without the front panel and transmitter.

By the way, I love mine (especiall when you add the talkpcr software to command it) whatever you want to call it.

W5UHQ

SDR's are terrible things.. Once you've got one the rest of your HF receivers become redundant. ;)

Great Tidings, Fred and James ....

I always try and follow the advice of those more knowledgeable than myself, which when you are a 'Thicko' gets you in loads of bovver!

Upon your advice, guys, I spent yet another overnight session, removed Windows Vista, Got myself Windows 7 Ultimate from 'You may know where - if so, Mums the word!' Gill Bates has a lot more money than I anyway!!!

Everything installed fine, and it seems to be quite a bit faster.

Proof is in the Photo Section, where I have posted a couple of Pics of my 'Set Up' - one with Win 7 on the monitor, and the other running MultiPSK. The computer and PCR1000, are down on the shelf on the right, to keep them away from the monitor noise (I can't earth that!).

James, ''''' 'Crusty', Eh? That was my nickname when I worked on the P&O Ships, as a musician / Entertainer in the 80's .... I used to repeat over and over to fellow performers and Crew - 'What a way to earn a crust ! ' and later found that everyone was referring to me as 'Old Crusty' !!

Have a great day - even though today the bands are quiet - I did hear a 'VA' on the Canadian side of Niagra Falls on 14.070 at midday - nothing else much there at all otherwise!

Regards & 73's de,

G3OBU, or ' The Old Fart'.

Hi John,

Examining your .FQL files motivated me to try TalkPCR again.
I had previously found nag screen and hanging (on close) difficulties with TalkPCR2.4F (tpv24f02 via http://www.mahy.demon.co.uk/talkpcr/talkpcr.htm)

Googling found there are "No Nag" versions 2.4 and 2.99d in the files section of the Yahoo TalkPCR forum (which I have joined).

These versions appear to run well and reveal your .FQL files to be generously extensive.
I don't yet know what I could add to enhance them!

Many thanks :-)

Fred.

Hi John,

Excellent - and quickly achieved too. It takes time to get everything "just so" after a major reinstall. You shouldn't be so self depricating because there's no sniff of thicko / old fart in your preachings!
(More tea Vicar?) ;-)

Your mention of "Old Crusty" got me to remembering a famous organist passenger who as much as took over the radio room to hear his recorded Blackpool Wurlitzer recital. He expected "BBC quality" reception but despite our attempts, faint, fading and noisy was the broadcast at such range and oh Lordy - was he "Crusty"!
In the 45 years since, I've often found that "greater sorts" can be unreasonably judgemental about what they cannot control.

Looking now at those photos you posted, looks more like your main computer is a Dell Optiplex GX series. It will have a "Tag" number that will identify the "build" and enable you to apply specific files and drivers
(http://support.euro.dell.com/support/index.aspx?c=uk&cs=ukdhs1&l=en&s=dhs)

Regards,

Fred.

P.S. Repeated thanks for posting the .mp3 and .fql files.

5671. Control software

Yahoo group: PCR1000
Date: 2011-01-08 11:17:10 UTC
From: vk2gel
Topic: 5671 Message: 5671

Hi I am looking for control software that will allow:

1. adjustable time delay before scan resume
2. priority channel scan
3. memory channel specific volume setting, to balance out quiet and loud channels
4. memory channel specific DSP settings for installed UT-106, as only a couple of channels need deep noise reduction.

Any advice appreciated, thanks. Grant vk2gel.

Grant (VK2GEL):

Happy New Year to you !!

Here is the latest version of the program that I wrote a while ago.
Note that this ZIP file is now also in the PCR1000 files section. It
is FREE, so please give it a try. If you like it, keep on using it. If not,
nothing spent, nothing lost !! The weakest part is the lack of a HELP
file. Instead, I put all of my work into the program itself, and did my
best to make it self-explanatory.

There are actually two executables included in this ZIPfile. The first,
PcrMC.exe is a DOS text-only version . . . it represents my original
program development. Much later in the development cycle, I
decided to implement the same capabilities in a DOS 640x480
graphical version as PcrMC-SA.exe. Both of these run very well
under multiple versions of Windows (Win95, Win98, WinME, Win2K,
WinXP . . . have not personally tested in Vista . . . Win7 refuses to
display the graphical version) . . . PcrMC.exe will run either
full-screen or in a DOS window . . . PcrMC-SA.exe will only run
full-screen (Windows restriction).

The basic syntax to run the program is as follows:

   pcrmc[-sa] [-com1 | 2 | 3 | 4] [-fast] [-debug] [filename]

Note that all command-line options are case-insensitive.

[-com1 | 2 | 3 | 4] : you can specify the COM port on the command-
line to override that which is recorded in the PCRMC.INI file.

[-fast] : this will skip the pause on the "HELP" screen as the program
is started up.

[-debug] : this will cause a PCRMC.DBG file to be created that will
contain time-stamped entries for each command sent to the PCR-1000
and each status returned from the PCR-1000. Note that when the
receiver is used as a scanner, this debug file can grow quite large in
time !! Be aware of the disk-space requirements by running this for
a long time.

[filename] : you can specify the "program" file that you'd like
PcrMC to initialize with upon startup (it is not necessary to also specify
the file extension as this is assumed to be .PGM). See some of the
included "program" files for examples of how to make use of the
powerful capabilities within the PCR-1000 that Icom's included

Windows program woefully ignores and/or hides from us !!

Good luck & let me know what you like/dislike. It's been quite awhile since I worked on it, but updates are not necessarily out of the question. I definitely still use it all of the time. Even though it works especially well on very old (DOS-only) PCs (since that is what it was originally developed for), it works equally well under Windows (see above).

A couple of notes that may prove very useful are as follows:
ALT-H shows a help screen (the closest thing there is to a HELP file !!)
ALT-A goes into "automatic" (demo) mode which will let you exercise
          all of the program features even without your PCR-1000 attached
ALT-P starts/stops "program" mode
ALT-S starts/stops "scan" mode
ALT-Q quit without saving configuration
ALT-X exit & save current configuration

Pressing any of the selection keys (for example, O for mode) will cause that field to blink, indicating the selection that can be controlled using the up/down and/or left/right arrow keys to change the selection. Press the ENTER key to complete the selection for that field.

Frequency information can be entered anytime that no other fields are already active (pressing F first is not absolutely necessary). When entering frequency information, you can also use the backspace key to make corrections. As well, you can use the ESCAPE key prior to hitting the ENTER key in order to discard any frequency changes made and return to the previous frequency setting.

Some keys take effect immediately (typically those that alternate between two settings) such as G for AGC on/off, B for NB on/off, etc. Some keys have multiple functions (but with related control) such as P for bandscope...pressing P once will let you select the bandscope speed...pressing P again while the bandscope selection is active will change the bandscope vertical resolution multiplier.

I believe that by putting appropriate entries into a "program file" of your own, PcrMC should provide all of the control that you are looking for.

Feel free to e-mail me if you have any questions, comments, and/or suggestions for improvements.

Have fun !!

cant say much about LW being from the US but MW_SW i can say just dont get too much antenna like a 100 foot longwire or something with a pcr or you'll be plagued with spurs - bleeding over strong signals

i can recommend an antenna i use to use and its simple - just a 24 foot vertical wire high in a tree, lower endfed - it will cover the entire freq range of the pcr decently..

5678. fldigi & pcr1000 - volume control?

Yahoo group: PCR1000
Date: 2011-01-09 06:50:37 UTC
From: damiengardner
Topic: 5678 Message: 5678

Hi Folks,

I'm probably missing something really obvious here.. We're in the process of moving house, so I've taken the opportunity to consolidate space a bit, and now have all my ham gear setup on a shelf above my desk in the house (rather than having a separate PC in the garage, and not getting out there very often). That's all good, but there's been a few teething problems, mainly because I've used the same XP machine in the garage for about 5 years, with four sound cards in it, but in the house I'm on my trusty macbook pro.. I've shoved a bunch of USB sound dongles on, and dug out my little old 5-channel mixer to give me headphone output from all the rigs, and things are mostly working well..

My main little niggle is the PCR-1000.. I can run TalkPCR no problems in windows in parallels.. but that's a little clunky, so I thought I'd just run a third copy of fldigi (one for the FT897 in the office, one for the FT857 in the fourby, and now one for the PCR-1000).

The problem with that is I can't see how to change the volume?! Even google isn't helping me much, so I'm thinking that either there *IS* a volume control somewhere there, but I'm missing it, or noone else is using fldigi with the PCR-1000 ?

Any thoughts? :)

5679. Totally Off Topic !!!

Yahoo group: PCR1000
Date: 2011-01-09 14:05:01 UTC
From: Music Maker
Topic: 5679 Message: 5679

.

Hello Happy Hamsters.

A bit of off topic and off forum stuff, that may interest other members - forgive me !!

A week ago, I ordered a Grundig G3 Globe Traveller radio (under the brand name of 'Eton'). Currently being sold by Maplins at 100 GB Pounds, but a company in US is selling them at 'half price' of 100 dollars, at 50 dollars, so with postage, it cost me 42 GB Pounds!!

At the same time, I ordered off Ebay, from Hong Kong - the matching Active Antenna Called a 'TG34', at a little over 15 Pounds (22 Dollars). Blow me down, I ordered and paid for them last Saturday, and both turned up with the same delivery this Friday Morning.

There is a Group for the Grundig G3 on Yahoo - but worth Googling 'Eton G3' and 'TG34 Antenna' to have a look at what I have bought.

The G3 appears to be just a sophisticated set of controlling hardware built around just one IC, which really does everything.

To say I am impressed would be an understatement, but all you need including the antenna will fit into a bag or box the size of the PCR1000.

My main interest of late is digital Amateur Radio listening - PSK31, RTTY, etc - or rather printing out text. Just a simple program like Zakanaka (free on the net whether you use it with the Eton G3 or the PCR1000) makes this a very effective and competent short wave listening tool for mobile or holiday use. All for the Grand Total of less than 55 GB Pounds or about 80 Dollars.

Oops, sorry.. I also bought (from TESCO), 4 high capacity rechargeable 'AA' batteries (it has a built in charger !).

Has anyone else got one of these G3 receivers? or better still the TG34 Antenna as well.. Are you too, amazed at the capabilities?

The antenna looks so simple - I would love to pull it apart to see if it could be easily replicated, or improved on. It just works so well, I don't want to ruin it!!

Kindest regards,

John

G3OBU, Founder Member of the United Kingdom Senior Citizens Indoor Hang Gliding and Wind Surfing Club.

Thanks Mark for all your work, but I know my station in life, which is GUI only :)

On a happier note, does anyone know if the standard Icom software can be made to wait more than 2 seconds before scan resume, maybe via a config file change please?

Thanks. Grant vk2gel.

5681. what's the highest serial number for hardware mod?

Yahoo group: PCR1000
Date: 2011-01-12 16:31:27 UTC
From: ehrichweiss
Topic: 5681 Message: 5681

Hi,

I'm considering buying a PCR1000 with a serial number well into the 7000's. Does anyone know the highest serial number to which the hardware mod was performed successfully?

I'm asking because I am wanting to also purchase a downconverter but I don't want any frequency holes in the higher freqs due to the stupid block if I can avoid it. I imagine I could figure out a way to work around the block but I'd rather not go through all that trouble.

Thanks

Eric

Topic: 5681 Message: 5682

From what I understand it is simply a matter of programming the radio with the band plan from a country that has no restrictions.

From: dolan
Topic: 5683 Message: 5683

Hi all,
Maybe someone can help.
First problem is i have installed "icomlib" a linux programme to control the pcr1000 but i am unable to locate the programme once installed.
icomlib is the ghetto.org PCR-1000 control suite. It consists of a library, command line programs, and a Qt widget GUI application.
This software controls an ICOM PCR-1000 receiver via a serial interface.

Second problem is will the pcr1000 operate with a usb>serial adaptor as programme usually asks for com port selection.
Hope this makes sense.

5684. TrunkPCR version 0.90.278 Now Available

Yahoo group: PCR1000
Date: 2011-01-13 21:19:52 UTC
From: Jay
Topic: 5684 Message: 5684

TrunkPCR version 0.90.278 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcrDwnld.html

NOTE: Moto Type-I Support *should* be finished in the next major update.

This update has Two Additions, One Change and Two Fixes...

Nov 28,2010 - Added: Mute Digital in Trunk Settings. Allows you to hear
Externally Decoded Audio Only.
Dec 05,2010 - Fixed: CSV File Import's Default Channel values.
Dec 07,2010 - -----: Adjusted the Height of Many Dialogs.
Dec 20,2010 - Added: 4800 hz Tone Detection for Edacs Dotting Tone.
Jan 06,2011 - Fixed: Changing/Editing Wave Format in Timed Recorder.

In the Trunk Settings, you can "UnCheck" the "Switch to Control When
Dotting
sequence Heard" checkbox and now try the "Dotting Tone Detector" slider.

You can select a value from 36 to 60, 36 for a real noisy voice channel or
up to 60 for
a really clean signal. I'm using 42 at the moment.

Version 0.90.278 Released 01/13/2011

Regards,
Jay

5685. Re: [PCR1000] Two problems.Linux and usb to serial.

Yahoo group: PCR1000

From: Damien Gardner Jnr
Topic: 5683 Message: 5685

Oooh, thankyou, I'll check that out! I'm currently having to run talkPCR in parallels to use my pcr1000 on my mac!

Yes, USB->Serial adapters work fine with the PCR-1000.

If you want to lock the USB->Serial adapter into a specific device name every time it's plugged in (incase you're using more than one :)), you can set it up with a rule in the udev rules - something like this works well:

```
$ cat /etc/udev/rules.d/50-ttyUSB.rules
# ID 0557:2008 ATEN International Co., Ltd UC-232A Serial Port [pl2303]
KERNEL=="ttyUSB*", SUBSYSTEMS=="usb", ATTRS{subsystem_device}=="0x0557",
ATTRS{subsystem_vendor}=="0x2008", MODE="0777", NAME="ttyUSB0"
```

Cheers,

DG

I've been playing with PCR1000BUR, ex2009 as well as looking at the hardware mod and I have yet to have any luck.

PCR1000BUR does reprogram the EEPROM so that it thinks it's from a different country but I still can't seem to receive any of the blocked frequencies.

EX2009 is just too dangerous for me to want to do anything to without a lot more experience.

Then to make things worse, I looked at the info for the hardware mod and it says that to do the "correct" way, you have to follow a trace that goes to the back and that'll lead to a via except the trace has been cut right before that. I can't find any sign of a trace being cut. I've scraped down to the copper and I don't see anything resembling a cut trace. I'm fairly certain that I have the correct trace. Any ideas as to why I'm seeing this?

Also, any chance that the software I'm using (TrunkPCR and TalkPCR so far) would be blocking those frequencies? If not and PCR1000BUR is doing what it's supposed to then I'm completely baffled as to why I can't open them up...I don't even want the blocked frequencies as much as the ones that I'll be missing if I downconvert..heh.

The hardware mod's I've seen talk about cutting a trace, but have only been done on some models at the factory. Then to remove two 0k resistors and add a 10k in another place...

My PCR1k is a EUR version, so I didn't need to do that on mine...

I think that some of the PCR1k's whose serial number is below 3000 could use the EEPROM Country change to enable full coverage. After you change the country and write the EEPROM's content back to the PCR1k, turn the PCR off and back on again...

TrunkPCR & PCR Pro do NOT block any freq ranges...

Jay

Where did you read that one? The only hardware mod I can find is the one on mods.dk and it's iffy at best. I've heard it's an old mod and only works with serial 1111 and below but the mod itself said it worked "up to at least 1111" so I don't know what to think of it.

My serial is 2868 so I *should* be able to do the eeprom mod but it doesn't appear to be working as of yet. I can change it in, say, PCR1000BUR and it'll show up as having been changed in PCRTalk but then when I go to tune it denies me so I'm about as confused as one can get..

I didn't figure the software would be the problem but I had to ask, ya know...:)

Actualy I wouldn't waste my time on that mod since the cell range doesn't have any analog comms...

Think I remember an old thread here where someone tried it and it still wouldn't work on his either...

Best to play it safe and keep your soldering iron out of your PCR and keep in working order :-)

Yeah, it's just that I'm going to be using a downconverter and I'll be missing whatever freqs happen to fall in the blocked ranges, otherwise I wouldn't worry about it at all.

I suspect that I've gotten one of the later models from Japan that have the microcode changed in them but I have little way of verifying this other than that one of the eeprom backup programs insisting that it's an "FCC-JPN" regardless of how I set the eeprom...

I'll probably see if I can find an opened PCR and sell this one later...right now I'll probably just enjoy what I have..:)

Eric

5692. IP1kC v1.2.2 Palm PDA Control - Thank You!

Yahoo group: PCR1000
Date: 2011-02-18 16:22:33 UTC
From: Fred
Topic: 5692 Message: 5692

IP1kC v1.2.2 (the newly updated European Version for PCR1000) from the Files Section is installed and working very well on my Palm VIIx.

Much appreciated thank you!

Fred.

5693. Bonito software frequency list

Yahoo group: PCR1000
Date: 2011-02-22 14:51:19 UTC
From: Tony
Topic: 5693 Message: 5693

Has there ever been an update to the Bonito frequency list? I got this a long time ago when I got the PCR1000. If there is such an update where is it and how do I get it? Thanks for the help.
Tony

5694. TrunkPCR version 0.90.279 Now Available

Yahoo group: PCR1000
Date: 2011-02-27 04:25:37 UTC
From: Jay
Topic: 5694 Message: 5694

TrunkPCR version 0.90.279 Now Available for Downloading from homepage:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcrDwnld.html

NOTE: Moto Type-I Support *should* be finished in the next major update.

This update has One Addition and Two Fixes...

Jan 06,2011 - Added: Monitor CTS Line to React when Power on PCR is
Turned OFF.
Feb 25,2011 - Fixed: Printing Group/Radio ID Lists and Search Results.
Feb 26,2011 - Fixed: Adding Signal Level to Search Report for Normal
Searching.

Version 0.90.279 Released 02/26/2011

Regards,
Jay

5695. PCR Pro version 1.14.277 Now Available
